

Index

- above threshold ionization, 362
- absolute phase, 300, 367, 372
- absorption, 346
 - excited-state
 - at pump wavelength, 12
 - excited-state (ESA), 6, 12
 - at laser wavelength, 12
 - ground-state (GSA), 6, 11
- absorption length, 348
- additive pulse mode locking (APM), 74, 102
- alexandrite, 21
- Allan deviation, 310
- amplifier, 8
- anisotropy, 430, 431
- area theorem, 383
- attosecond pulse, 173, 348, 349, 373
- attosecond timescale, 343
- Auger electron, 374
- autoconvolution, 244
- autocorrelation, 232, 354, 363

- background dielectric constant, 394, 395, 398
- balanced cross-correlator, 126
- bandwidth
 - gain, 3
 - limited, 354, 366, 371, 373
 - relative, 3
- BBO, 183, 184
- beat note, 302
- Bloch
 - equation, 394
 - frequency, 381, 382
 - oscillation, 381
 - sphere, 383
 - vector, 383, 394
- broadening
 - homogeneous vs. inhomogeneous, 5
 - vibronic, 15

- carrier wave, 297
- carrier-envelope
 - absolute, 318, 328
 - coherence, 323
 - definition, 317
 - offset frequency, 96, 295, 296, 402, 406
 - phase, 76–78, 96, 121, 205
 - phase shift, 297
 - pulse-to-pulse evolution, 318
 - static, 318, 319, 328
- CCD camera, 351, 361
- Ce:LiCAF, 48
- Cesium, 306
 - fountain clock, 308
- chalcogenide, 31
- chirp, 390
- chirped mirror, 75, 106, 107
 - double-chirped mirror, 105, 107, 109
 - double-chirped mirror pair, 111, 116
 - matching problem, 107
- Co:MgF₂, 36
- coherence length, 346
- coherent anti-Stokes Raman scattering, 339
- coherent phase locking of mode-locked lasers, 335
- coherent pulse synthesis, 331, 335, 336
- colquiriite, 22, 49, 73
- comb offset frequency, 295
- continuous wave (CW), 7
- continuum, 232
- coupled-cavity mode locking (CCM), 74
- Cr:BeAl₂O₄, 21

- Cr:forsterite, 73, 116, 123, 124, 126, 128–130
- Cr:GSAG, 22
- Cr:GSGG, 22
- Cr:LiCAF, 22
- Cr:LiSAF, 22
- Cr:LiSGaF, 22
- Cr:MgSiO₄, 27
- Cr:YAG, 27, 73, 116, 123, 124, 131
- Cr:YSGG, 22
- Cr:ZnS, 34
- Cr:ZnSe, 32
- cross-correlation, 354, 355, 363, 364
- cross-relaxation, 45
- crystal-angle-dithering, 234
- cunyite, 27
- cutoff, 346, 349
- cycle of light, 380

- decay time, 374
- defocusing, 346
- dephasing, 346, 413, 420, 426–430, 434, 440
 - time, 420
- detuning, 395
- difference-frequency generation, 339
- differential transmission, 389
- dipole matrix element, 380, 385
- dispersion, 237
- dispersion compensation, 140
 - by acousto-optic modulator (AOM), 145
 - by chirped mirror, 143
 - by deformable mirror, 146
 - by grating pair, 141
 - by liquid crystal modulator, 144
 - by prism pair, 142
- dispersion-managed soliton, 74, 77, 84, 106
- dispersive pulse-broadening, 235

- electric field, 231
- electron wave packet, 368, 370
- envelope
 - of the light field, 380
 - Rabi flopping, 380
- excite-probe, 232
- extreme nonlinear optics in atoms, 402

- f-to-2f
 - detection of offset frequency, 319
 - interferometer, 320
- fast saturable absorber, 74, 78, 79, 87, 93, 102
- feedback, 233
- femtosecond spectroscopy, 413
- few-cycle pulse, 384
- fine structure constant, 306, 311
- forsterite, 27
- Franz-Keldysh effect (dynamic), 382, 391
- frequency comb, 295, 320
- frequency interval divider, 300
- frequency-resolved optical gating (FROG), 182, 183, 232, 245, 354
 - trace, 232
