$\mu \llcorner E$, 62

approximate continuity, 61, 87
approximate differentiability, 36
approximate jump points, 62
area formula, 8

Besov space, 89
blow-up, 95
bounded variation, 84
Bressan's compactness conjecture, 46
Burgers' equation, 79
BV Structure Theorem, 61, 62

chain rule, 86
characteristics, 79
Chebyshev inequality, 41
cofactor matrix, 115
commutators, 23
compactness, 83
compatibility condition, 92
compressibility constant of the flow, 42
continuity equation, 5
convergence in measure, 33
convex entropy, 80

$D^a u, D^c u, D^j u, D^s u$, 62, 99
Depauw's example, 20
directional differentiability in measure, 33
discontinuity, 89
disintegration of measures, 96
distributional solutions, 78

entropy flux, 80
entropy solution, 81

flux function, 77
Fréchet derivative in measure, 33

Gâteaux derivative in measure, 33
genuine nonlinearity, 78
global existence, 81

Hölder continuity, 88

jump set, 87, 93

kinetic formulation, 82, 92

L^1-contraction, 85
Lagrangian flows, 16
lifespan, 79
Liouville theorem, 100
Lusin theorem for approximately differentiable maps, 36

maximal function, 40

narrow convergence, 13
nondegeneracy, 83
nonlinearity, 79

ordinary differential equations, 3

Prokhorov compactness theorem, 13

Rademacher theorem, 8
Rankine–Hugoniot condition, 80
rarefaction wave, 80
rectifiability criterion, 94
rectifiable set, 85
regularizing effect, 81
renormalized solution, 19
Riemann problem, 79
Riesz–Fréchet–Kolmogorov compactness criterion, 48

S_u, 61
scalar conservation law, 77, 80

self-similar solution, 80
shock, 80
shock speed, 80
Sobolev space, 83
split state, 95, 98, 101, 103, 105
square root example, 4
stability, 81
structure theorem, 85, 91
superposition solution, 11

tangent measure, 65
tightness, 13
trace, 85
transport equation, 5

uniqueness, 81

vandermonde matrix, 112
vanishing mean oscillation, 86
vanishing viscosity method, 80
velocity averaging, 84

weak solution, 79

Editor in Chief: Franco Brezzi

Editorial Policy

1. The UMI Lecture Notes aim to report new developments in all areas of mathematics and their applications - quickly, informally and at a high level. Mathematical texts analysing new developments in modelling and numerical simulation are also welcome.

2. Manuscripts should be submitted (preferably in duplicate) to
   Redazione Lecture Notes U.M.I.
   Dipartimento di Matematica
   Piazza Porta S. Donato 5
   I – 40126 Bologna
   and possibly to one of the editors of the Board informing, in this case, the Redazione about the submission. In general, manuscripts will be sent out to external referees for evaluation. If a decision cannot yet be reached on the basis of the first 2 reports, further referees may be contacted. The author will be informed of this. A final decision to publish can be made only on the basis of the complete manuscript, however a refereeing process leading to a preliminary decision can be based on a pre-final or incomplete manuscript. The strict minimum amount of material that will be considered should include a detailed outline describing the planned contents of each chapter, a bibliography and several sample chapters.

3. Manuscripts should in general be submitted in English. Final manuscripts should contain at least 100 pages of mathematical text and should always include
   - a table of contents;
   - an informative introduction, with adequate motivation and perhaps some historical remarks: it should be accessible to a reader not intimately familiar with the topic treated;
   - a subject index: as a rule this is genuinely helpful for the reader.

4. For evaluation purposes, manuscripts may be submitted in print or electronic form (print form is still preferred by most referees), in the latter case preferably as pdf- or zipped ps- files. Authors are asked, if their manuscript is accepted for publication, to use the LaTeX2e style files available from Springer's web-server at
   ftp://ftp.springer.de/pub/tex/latex/svmonot1/ for monographs
   and at
   ftp://ftp.springer.de/pub/tex/latex/svmultt1/ for multi-authored volumes

5. Authors receive a total of 50 free copies of their volume, but no royalties. They are entitled to a discount of 33.3% on the price of Springer books purchased for their personal use, if ordering directly from Springer.

6. Commitment to publish is made by letter of intent rather than by signing a formal contract. Springer-Verlag secures the copyright for each volume. Authors are free to reuse material contained in their LNM volumes in later publications: A brief written (or e-mail) request for formal permission is sufficient.
