

Index

A

Adaptive evolution, 59
Alpha satellite DNA, 62
Aneuploidy, 70
Argonaute protein, 6
Artificial chromosome, 171–172
Athila, 155, 163
AT tracts, 58

B

Barley, 158
B chromosome, 9
Biased recombination, 47
Budding yeast, 3–5

C

CAF1. *See* Chromatin assembly factor 1
CATD. *See* CENP-A targeting domain
C-banding, 89–90
Cen8. *See* Centromere of chromosome 8
CenH3. *See* Centromeric histones
CenH3-nucleosomes, 37
CENP-A. *See* Centromeric protein A
CENP-A targeting domain (CATD), 21
CENP-B. *See* Centromeric protein B
CENP-B box, 18, 79
CENP-C. *See* Centromeric protein C
CentC, 158
CentO, 158
Centric fusions, 81
Centric shifts, 81–82
Centromere
 drive hypothesis, 64
 modification, 168–170
 repositioning, 82–83
Centromere-drive model, 43
Centromere identifier (Cid), 39

Centromere of chromosome 8 (*Cen8*), 164
Centromere repeat associated small interacting RNAs (crasiRNAs), 93
Centromere-specific histone H3, 2
Centromere-specific retrotransposons (CRs), 158
Centromeric histones (CENH3s), 37, 160–162
Centromeric protein A (CENP-A), 13, 37, 79
Centromeric protein B (CENP-B), 15, 57, 79
Centromeric protein C (CENP-C), 41, 69, 162
Centromeric RNAs, 70
Cereals, 158
Chromatin immunoprecipitation (ChIP), 79, 155
Chromosomal breakage, 172
Chromosomal rearrangement, 15–17, 114
Cid. *See* Centromere identifier
Concerted evolution, 56
Constitutive heterochromatin, 89
CREST sera, 90
Chromatin assembly factor 1 (CAF1), 22
Cse4p, 4

D

Dicentric chromosome, 167
Dicentrics, 84
Dicer, 8
Diffuse centromeres, 55
DNA methylation, 169
Drosophila centromere, 34
Drosophila melanogaster, 11

E

Ectopic centromeres, 84
Epigenetics, 2
Evolutionary new centromere, 104

F

Female meiosis, 42–43
 Fiber FISH, 78
 Fissions, 83, 117
 Fission yeast, 5–8
 Fitness, 35
 Fixation, 36
 Fluorescence *in situ* hybridization, 155

G

Gene conversion, 56
 Gramineae, 154

H

Heterochromatin protein 1, 67, 79
 Heterochromatin protein 1- α (HP1 α), 19
 HFD. *See* Histone fold domain
 Higher-order array, 35
 HIRA, 22
 Histone fold domain (HFD), 39, 160
 Histone methyltransferases, 79
 H3K4me2, 168
 H3K9me2, 168
 Holocentric chromosome, 167–168
 HTR12, 160
 Human artificial chromosome, 18
 Human X centromere, 34
 Hybrid inviability, 35
 Hypomethylation, 170

I

Interspecies hybridization, 96
 Inversions, 81

K

Karyotypic evolution, 81, 107
 KERV, 84
 Kinetochore, 73
 Knob, 11
 Knob elements, 42

L

LINE-1, 95
 Long terminal repeats (LTRs), 93
 Loop1 region, 41

M

Macropodine, 93
 Maize, 158

Mardel(10), 17
 Marsupials, 80
 Meiotic drive, 43–44, 114
 Microdissection, 86
 Minichromosomes, 170–171
 Mis12, 162–163
 Molecular drive, 46, 56
 Mutation, 35
 Mutational rate, 36

N

Natural selection, 57–59
 Neocentromere, 10–11, 78, 105, 166
 Neodicentric chromosome, 17–18
 Neutral evolution, 39
 New World monkeys, 120
 Noncoding RNA, 91–92
 N-terminal tail, 39
 N-terminal tail domain, 160

O

Old World monkeys, 120
 Outgroup, 119

P

Phylogenetic tree, 88–89
 Phylogeny, 109
 Point centromeres, 34, 60–61
 Polycomb group proteins, 92
 Positive selection, 39
 Primates, 105
 Promoters, 59, 95

R

Recombination, 34
 Regional centromeres, 60
 Regulatory elements, 59
 Repositioned centromere, 115
 Retroelement, 94–96
 Retrovirus, 93
 Rice, 158
 RISC. *See* RNA-induced silencing complex
 RITS. *See* RNA-induced transcriptional silencing complex
 RNA-induced silencing complex (RISC), 91–92
 RNA-induced transcriptional silencing complex (RITS), 92
 RNA interference, 69
 Robertsonian fusions, 43
 Rolling-circle replication, 66

S

Satellite-binding proteins, 46
Satellite DNA, 78
 α -satellite DNA, 18
Satellite DNA library, 61
Satellite DNA transcripts, 69
Scm3p, 5
Segmental duplications, 111, 165
Segregation distorter (SD), 43
Selection, 36
Small interfering RNAs (siRNAs), 67, 92
Sugarcane, 158
Swi6, 6
Synteny, 112

T

Tammar wallaby, 95–96
Tandem repeats, 163

Telomere, 117–118

Transcription, 91
Translocation, 108
Transposition, 35

U

Unequal crossingover, 56

W

Wheat, 158

X

Xist transcript, 92
