

Index

A

Abiotic stressor, 232, 234
Adaptation, 79
Adaptive plasticity, 160, 169
Aggression, 5
Alarm calls, 12, 15
Alkaloids, 182, 183, 187, 189, 191
Allelobiosis, 76, 92, 94, 95, 114, 116–121
Allelochemicals, 76, 180
Allelopathy, 4–5, 61–70, 76, 88
Ambrosia dumosa, 8, 9, 12
Antirrhinum majus, 79
Ants, 147
Aphid resistance, 113–122
Artemisia californica, 78
Artemisia vulgaris, 78
Auxin, 79

B

Barley, 81, 92, 116–121
Biogenic volatile organic compounds
(BVOCs), airborne, 77
Biomass allocation, 80
Biosensor, 240–243
Biotic stressor, 232, 234
Blue light, 162, 163
Bruchins, 30
Burst, 237

C

Caeliferins, 32
Cakile edentula, 80
Carbon dioxide
 agriculture, 195–196
 atmospheric increase, 179

 compensatory feeding, 194–196
 decomposition, 196
 fungi, 196–197
 herbivory, 192–196
 nitrogen, 188
 parasitoids, 198
 pesticides, 195–196
 phenolics, 185–188
 pheromones, 198–199
 phytohormones, 191–192
 predators, 198
 soil, 196
 terpenoids, 185–186
 VOCs, 185–186, 198
Carbon–nutrient balance hypothesis (CNB),
 184, 186–188
Cell wall, 168
 expansin, 168
 XTH, 168
Centaurea maculosa, 12
Chemical interaction, 76
cis-Jasmone, 28
Climate change, 179–180
Clonality, 12
CO₂, 233
Coevolution, 145, 150
Coexistence, 75
Collection of plant-emitted VOCs, 238–239
Communication, 83
 biological, 2–3
 evolution, 7
 general definition, 2
 true, 3, 12
Competition, 76, 160
Constitutive defence, 141

Crop health monitoring, 230, 231, 239
 Crosstalk, 51
 Cues, 4, 15
 Cyanogenic glycosides, 189–191
 Cytokinin, 79

D

Defense, 99–108, 171–172
 DELLA proteins, 165, 166, 171
 Dhurrin, 189
 (E)-4,8-Dimethylnona-1,3,7-triene
 (DMNT), 34
 DOXP pathway, 187, 190, 191
 Dynamic headspace collection, 22

E

Ecotypic variation, 170
 Electric fields
 Electronic nose, 240, 241, 243
 Energy transmission, 5
 Ethylene (ET), 44, 47, 49, 78
 Evolution, 75
 Exotic species, 65, 69, 70

F

Female choice, 14, 15
 Fitness, 3, 50, 52, 53
 Flame ionization detector (FID), 240, 243
 Fruit picking, 233, 235
 Fungal infection, 232, 235, 236

G

Gas chromatography (GC), 229, 239,
 240, 242, 243
 Gas chromatography-Fourier transformed
 infrared spectroscopy (GC-FTIR), 27
 Gas-phase reactions, 237
 GC-FTIR. *See* Gas chromatography-Fourier
 transformed infrared spectroscopy
 GC-MS, 240, 242, 243
 Genetic engineering, 223
 Germination, 78
 Greenhouse, 229–243
 Greenhouse gases, 179–180
 Group selection, 9, 12–13
 Growth-differentiation balance hypothesis
 (GDB), 184, 188
 Growth rate, 82

H

Handicap principle, 8, 12
 Herbivore-induced volatiles, 141
 Herbivores, 77, 100, 103–106

(Z)-3-Hexenol, 234
 Hormones, 165, 167–169
 auxin, 166–167, 171
 brassinosteroids, 167
 ethylene, 168, 171, 172
 gibberellin, 165–166

I

Individual selection, 8–12
 Induced defence, 106, 137, 217
 Induced resistance, 100, 106, 107
 Induced systemic resistance (ISR), 43–48, 54
 Information, 2
 In-situ hybridization, 26
 Integrated pest management, 215, 216, 222, 224
 Intercropping, 88
 ISR. *See* Induced systemic resistance

J

Jasmonic acid (JA), 33, 45, 47, 48, 51

K

Kin
 recognition, 80
 selection, 12–13

L

Ladybird, 93, 95
Larrea tridentate, 9
 Leaf temperature, 82
 Light, 233
 Lima bean, 101–104, 106, 107
 Liquid-liquid extraction, 24
 Local emissions, 234–236

M

Mass spectrometer, 240–241
 Mass spectrometry (MS), 26
 Mate choice, 13
 Methyl benzoate, 79
 Methyl jasmonate (MeJA), 81
 Methyl salicylate (MeSA), 81, 235
 Mevalonic pathway, 187, 190, 191
 Modularity in plants, 6, 7
 Monoculture, 79
 Monoterpenoid, 78
 MS. *See* Mass spectrometry
 Multiple stress, 169, 171
 Mutualism, 129, 131
 Myrmecophyte, 130

N

Natural enemies, 88
 Nicotiana attenuate, 78

- Nonstressors, 231, 233, 235
 Nuclear magnetic resonance (NMR), 26
- O**
 Optimal defense hypothesis, 183–184
 Ovule competition, 13
 Oxidative cleavage, 235
 Oxylipins, 28
- P**
 Parasitoid, 94, 95
 Pathogen-associated molecular pattern (PAMP), 45
 Pathogens, 77, 100, 102, 103, 105, 106
 PDMS materials, 25
 Phenolics, 185–187, 189–190
 Phenylalanine, 189–190
 Photoreceptors, 162–164
 cryptochromes, 162–163
 phototropins, 163–164
 phytochromes, 164
 Phytochrome interacting factors (PIF), 164, 165
 Phytohormones, 28, 189–192
 Phytotoxic effects, 78
 Phytotoxin, 63, 65
 PIF. *See* Phytochrome interacting factors
 Plant activators
 BABA, 222
 benzothiadiazole (BTH), 219
 bion, 219
 bio-S, 219
 ‘bioYield Concentrate’, 219
 chitosan, 219
 cis-jasmone, 220
 jasmonic acid (JA), 220
 messenger, 219
 methyl jasmonate, 220
 methyl salicylate, 219
 neudo vidal, 219
 oxycom, 219
 PRORADIX, 219
 Plant communication, 100–102
 Plant defence 21, 25, 27, 28, 34, 36, 37, 49, 50, 101–102, 105–106, 115, 137, 146, 217–222
 Plant diversity, 89
 Plant growth-promoting rhizobacteria (PGPR), 44–45, 47, 52–54
 Plant hormones, 78, 100
 Plant–plant interaction, 79
 Pollen competition, 13
 Porapak Q, 23
 Pre-concentration, 238, 239, 241
 Priming, 47–54, 102, 103, 106, 217–219
 Protein competition model (PCM), 189
 Proton-transfer-reaction mass spectrometry (PTR-MS), 35
 Pruning, 233
 PTR-MS. *See* Proton-transfer-reaction mass spectrometry
 Push-pull, 222–223
- R**
 Reactive oxygen species (ROS), 63
 Real-time mass spectrometry (MS), 35
 Resistance, 100–104, 106, 107
 Resistance breeding, 113–122
 R:FR ratio, 161, 164, 170, 171
 Root biomass, 79, 80
 Root competition, 8, 12
 Root elongation, 78
 Root-emitted volatile, 79
 Root grafting, 13, 15
 Root growth, 79
 Root territoriality, 9, 10
- S**
 Sagebrush, 102–104, 108
 Salicylic acid, 45, 47, 50, 51, 53
Salvia leucophylla, 78
 SBSE. *See* Stir bar sorptive extraction
 Self/non-self recognition, 15
 Sexual signaling, 13
 Shade avoidance, 160–162
 Shikimic acid pathway, 189–190
 Sibling rivalry, 13
 Signal
 ability to ignore, 5
 biological, 3
 costs, 8, 9
 general definition, 2
 naturally selected, 3, 4
 Signal evolution, 150
 Signalling, 99–108
 Solid phase extraction (SPE), 24
 Solid phase microextraction (SPME), 23
 Sorption, 237
 Sound, 7
 SPE. *See* Solid phase extraction
 Specificity, 231, 233–236
 SPME. *See* Solid phase microextraction
 Stir bar sorptive extraction (SBSE), 25
 Stomata, 238

Stomatal opening, 82
Stressors, 231, 232–233, 234–236, 243
Structure-activity relationships, 32
Super Q, 23
Symbiosis, 129
Systemic acquired resistance (SAR), 45, 48, 50, 54
Systemic emissions, 236
Systemic signaling, 104

T

Talking trees, 100–103
Temperature, 233, 237, 241
TENAX TA, 23
Terpene, 79
Terpenoids, 185, 186, 189–190
Time course of stress-induced volatile emissions from plants, 234, 235
Toxins, 5, 9, 11, 15
Trade-off, 171
Transcription factors
 MYB72, 46, 48

 MYC2, 48, 49
 WRKY, 49
Trichomes, 235
(E,E)-4,8,12-Trimethyltrideca-1,3, 7,
 11-tetraene (TMTT), 34
Trophic levels, 76

V

Vacuum distillation, 24
Vapour phase extraction (VPE), 25
Ventilation, 237
Volatile, 77
Volatile organic compounds (VOCs),
 101–107, 181, 182, 185, 186, 198
Volatile signal, 79
Volicitin, 30

W

Weeds, 92
Within-plant signaling, 99–108
