

Index

A

Abrasion resistance, 59
Absorption, 60
Absorption characteristics, 16
Accelerated carbonation test, 46
Accelerated corrosion, 272
Accelerated pozzolanic activity, 238
Accelerated setting times, 195
Accelerator, 251
Acetylene production, 244
Activated fly ash, 48
Activation of fly ash, 23
Activation techniques, 23
Activation time, 205
Activity index, 141
Aggregate content, 214
Aggregates, 163
Air entrainment, 243
Air/gas permeability, 42
Air-content, 15
Air-cured concrete, 199
Air-curing, 86
Air-entrained concrete, 51
Air-entrained fly ash concrete, 57
Air-entraining admixture, 243
Air-entraining agent, 15
Air-permeability, 267
Alkali-activated cementitious materials, 154
Alkali activated ground granulated
blast-furnace slag, 17
Alkali activator, 155
Alkali aggregate reaction, 54
Alkali concentration, 124
Alkali ions, 52
Alkali metal content, 53
Alkali-silica reaction, 52, 114
Alkali silica reactivity, 54

Alkali silicate gel, 114
Alkaline hydroxyl ions, 53
Alkalis, 190
Amorphization, 191
Amorphous phase, 239
Amorphous silica, 231
Anhydrite, 6
Apparent diffusion coefficients, 214
Autogenous shrinkage, 224
Average diameter, 123
Average particle, 177

B

Bending strength, 209
Black particles, 233
Black rice husk ashes, 276
Blaine fineness, 5
Blast furnace slag aggregates, 96
Bleed characteristics, 130
Bleeding, 75
Bleeding and segregation, 11
Bleeding capacity, 131
Bleeding rate, 131
Blended cements, 232
Blended Portland cement mortar, 257
Blending efficiency, 252
Bond strength, 74
Bulk Density, 69

C

Calcination time, 190
Calcined-clay, 206
Calcined-clay brick, 206
Calcium carbide residue, 244
Calcium hydroxide, 181

C (cont.)

Calcium ions, 53
 Calcium silicate hydrate(s), 52
 Capillary absorption, 96
 Capillary pores, 113
 Capillary stress, 101
 Carbonaceous material, 233
 Carbonation, 273
 Carbonation depth(s), 47
 Carbonation rates, 45
 Cellular structure, 236
 Cement-aggregate bond, 70
 Cement clinker hydration, 203
 Cement paste, 257
 Cement paste-aggregate interface, 86
 Cement-quartz pastes, 180
 Cementing efficiency factor, 79
 Cementitious efficiency, 143
 Cementitious material, 71
 Chemical activators, 255
 Chemical attack, 176
 Chemical composition, 178
 Chloride and hydroxyl ions, 153
 Chloride binding capacity, 214
 Chloride diffusion, 214
 Chloride diffusion coefficients, 214
 Chloride-ion penetration resistance, 266
 Chloride penetrability, 215
 Chloride penetration, 270
 Chloride penetration resistance, 270
 Chloride permeability, 104
 Coefficient, 153
 Combustion, 232
 Combustion temperature, 232
 Compaction factor, 241
 Compressive strength, 238
 Concrete, 241
 Conductivity, 213
 Conductivity measurement, 238
 Consistency, 243
 Controlled permeability formwork, 266
 Corrosion, 12
 Corrosion behaviour, 110
 Corrosion of reinforcing steel, 47
 Corrosion resistance, 48
 Cracking, 55
 Creep, 100
 Creep-time curves, 37
 Cristobalite, 239
 Cristobalite form, 69
 Crumb rubber, 96
 Crushing value, 254
 Crystalline phase, 186
 Crystalline silica, 232

CSH gel, 23
 Curing, 59
 Curing ages, 202
 Curing condition(s), 27
 Curing temperature(s), 189
 Curing time, 181

D

Degree of saturation, 34
 Dehydroxilation, 175
 Dehydroxylation, 190
 Deicing salt resistance, 277
 Deicing salt-scaling resistance, 277
 Deleterious chemicals, 55
 Dense texture, 140
 Density, 100
 Depth of carbonation, 45
 Differential thermal analysis, 188
 Diffusion kinetics, 214
 Diffusivity, 105
 Disintegration, 55
 Dry and wet curing conditions, 34
 Drying shrinkage, 36
 Durability, 70
 Durability factor, 51
 Dynamic modulus, 51

E

Early age reactions, 187
 Early strength development, 257
 Efficiency factor, 185
 Elastic modulus, 259
 Electrical resistivity, 265
 Elevated temperature(s), 32
 Embedded reinforcement, 166
 cement/sand ratio, 246
 Expanded polystyrene, 89
 Expansion, 278
 Expansion of mortars, 114

F

Ferrosilicon alloys, 67
 Fibre reinforced mortar, 82
 Filler, 70
 Fineness, 3
 Fineness modulus, 254
 Flash-calcination, 190
 Flexural fatigue performance, 149
 Flexural strength, 259
 Flow diameter, 241
 Flow rate, 193

Flow table, 80
 Fluidity, 132
 Fluidity Ratio, 132
 Fly ash, 1
 Freeze-thaw attack, 79
 Freezing and thawing, 106
 Freezing and thawing resistance, 90
 Freezing-thawing resistance, 50
 Fresh density, 242
 Frost resistance, 107

G

Gap-graded mixtures, 241
 Gas permeability, 42
 Gehlenite hydrate, 179
 Geopolymer cement, 184
 GGBS, 17
 Glassy, 1
 Green concrete, 232
 Ground calcined-clay brick, 199
 Ground granulated blast furnace slag, 17
 Ground rice husk ash, 257
 Grouts, 98

H

Hardness, 255
 Heat evolution rate, 187
 Heat of hydration, 10
 Heat of hydration, especially in mass concreting, 10
 Heated and unheated concrete, 84
 Heavyweight concrete, 254
 Heterogeneous nucleation, 225
 High-alkali cement, 114
 High alkali content, 53
 High-calcium Class C fly ashes, 17
 High-performance concrete, 43
 High-performance mortars, 180
 High-range water-reducers, 191
 High-reactivity metakaolin, 212
 High-strength, 101
 High-strength concrete, 216
 High temperature, 91
 High-volume fly ash, 14
 High-volume fly ash concrete, 27
 Hot weather, 143
 Hot-weather conditions, 103
 Hydrated cement matrix, 210
 Hydration, 11
 Hydration mechanism, 126
 Hydration of C_3A , 17
 Hydration of C_3S , 17

Hydration of concrete, 126
 Hydration period, 180
 Hydration products, 184
 Hydration rate, 181
 Hydration reaction, 71
 Hydration time, 196
 Hydraulic lime, 194
 Hydrochloric acid pretreatment, 238
 Hydrogarnet, 181
 Hydroxide ion concentrations, 217
 Hygroscopic, 245

I

Ilmenite aggregates, 255
 Ilmenite concrete, 255
 Image characteristics, 136
 Incineration, 257
 Initial moist curing, 221
 Interfacial transition zone, 252
 Interfacial zone, 237
 Internal expansion, 55
 Intrinsic permeability, 152
 Intruded pore volume, 195

K

Kaolin, 175
 Kaolinite, 175

L

Length change, 226
 Lightweight aggregate, 89
 Lightweight aggregate concrete, 100
 Lignosulfonate, 243
 Lime consumption, 190
 Lime-saturated water, 263
 Loss on ignition, 15
 Low kaolinite content, 198
 Low-calcium Class F fly ashes, 17
 Low-quality coarse aggregates, 87
 Low-quality fly ash, 46

M

Magnesium sulfate solution, 220
 Mean particle size, 223
 Mechanical properties, 254
 Metakaolin, 175
 Metakaolin sands, 194
 Metastable hexagonal phases, 189
 Micro-filler, 180
 Micro-hardness, 210

M (cont.)

Microporous surface, 235
 Micro-silica, 76
 Microstructure, 203
 Microwave curing, 188
 Mineral admixtures, 96
 Mineralogical analysis, 178
 Mineralogical characterization, 5
 Modulus elasticity, 259
 Modulus of elasticity, 208
 Moist-cured, 154
 Moisture, 5
 Moisture content, 5
 Molten slag, 121
 Morphology, 138
 Mortar bars, 111

N

Near surface characteristics, 59
 Nitrogen gas permeability, 43
 Non-crystalline form, 68
 Non-ground RHA, 266

O

Opaline aggregates, 54
 Open porosity, 246
 Oxygen permeability, 42

P

Particle diameter, 207
 Particle packing, 176
 Particle size, 2
 Particle size distribution, 233
 Periclase, 7
 Permeability, 12
 Phenolphthalein indicator method, 224
 Plastic shrinkage strain, 103
 splitting tensile strength, 61
 Poisson's ratio, 32
 Polarization resistance techniques, 48
 Pore diameter, 196
 Pore size, 238
 Pore-size distribution, 98
 Pore-size refinement, 70
 Pore solutions, 217
 Pore structure, 195
 Porosity, 50
 Portlandite, 44
 Pozzolan(s), 57
 Pozzolan action, 252
 Pozzolan activity, 4

Pozzolan admixture, 67
 Pozzolan effect, 87
 Pozzolan material, 69
 Pozzolan reaction(s), 50
 Pozzolan reactivity, 222
 Pumpability, 11

R

Rapid chloride permeability, 154
 Rate of hydration, 205
 Ratios, 144
 Reaction kinetics, 189
 Recycled aggregates, 87
 Refractory, 233
 RHA reactivity, 231
 Rheological properties, 75
 Rhyolite tuff, 143
 Rice husk, 231
 Rice husk ash, 231
 Rubberized concretes, 96

S

Salt-scaling, 106
 Scanning electron microscopy, 157
 Seawater, 111
 Secant modulus of elasticity, 94
 Segregation, 75
 Self-compacting concrete, 90
 Setting time(s), 133
 Setting times and consistency, 191
 Shrinkage, 35
 Silica content, 236
 Silica fume, 86
 Silica fume concrete, 82
 Silica fume efficiency, 72
 Silica powder, 232
 Silicate compounds, 184
 Siliceous aggregate, 53
 Silicon metal, 67
 Slump, 241
 Sodium hydroxide, 129
 Sorptivity, 199
 Soundness of aggregate, 50
 Spacing factors, 51
 Spalling, 112
 Specific gravity, 75
 Specific surface, 75
 Specific surface area, 207
 Spherical particles, 69
 Splitting tensile strength, 253
 Sprayed concrete, 74
 Steel fibre reinforced concrete, 96

Stratlingite, 189
Strength, 237
Strength development, 22
Strength loss, 55
Sulfate attack, 12
Sulfate expansion, 222
Sulfuric acid resistance, 58
Sulfate resistance, 12
Superplasticizer, 241
Super-sulfated cements, 164
Supplementary cementing materials, 114
Supplementary cementitious materials, 98
Surface area, 69

T

Temperature, 16
Tensile creep behavior, 101
Tensile strength, 259
Ternary blended mortars, 246
Tetracalcium aluminate hydrate, 179
Thaumasite form of sulfate attack, 160
Thermal analysis, 182
Thermal conductivity, 100
Thermogravimetry, 182
Threshold value, 196
Time to cracking, 272
Tire chips, 96
Tire rubber, 96
Tobermorite gel, 8
Total cementitious material, 14
Total porosity, 198
Toughness, 73
Transition zone, 70
Tricalcium aluminate, 7
Tridymite, 231

U

Uniaxial compression, 202
Uniaxial compressive strength, 206
Unit weight, 254

V

Vapour diffusivity, 59
Vebe time, 79
Void ratio, 254

W

Water absorption, 200
Water-binder ratio, 61
Water-cement, 44
Water-cement ratio, 147
Water-cementitious material
ratio, 204
Water curing, 26
Water demand, 193
Water penetration, 154
Water permeability, 39
Water-reducer, 77
Water-to-binder ratio(s), 61
Waterglass activation, 126
Waterglass-alkali-activated slag, 163
Workability, 12

X

X-Ray diffraction, 182

Y

Young concrete, 202
