

Subject Index

A

ACRP30 158
adenosine 42, 43
adipocyte (and adipose tissue) 15, 20, 26,
56, 81–89, 91, 111, 123, 126, 134, 145, 156,
158
adiponectin 158
adipose tissue as part of the immune
system 81–89
adiposity 1–11, 16, 17, 20, 24–30, 39, 85, 134
adipsin 83
aging 37, 38, 40–42, 44
agouti-related protein 2, 9, 21, 22, 56, 180,
181, 184
amygdala 23
anorexia nervosa 45, 104–106, 133, 143, 144,
146, 147
antipsychotic drug 149–151
apoptosis 85
appetite (cf. also feeding behavior) 45, 143
arcuate nucleus 2, 6–10, 21–23, 39, 46, 53,
56–58, 60, 66, 70, 74, 76, 77, 95, 100, 130

B

biological rhythm 38–40
bipolar affective disorder 143
body weight homeostasis during pregnancy
and lactation 91–98
bone formation 145, 146

C

caloric restriction 39
candidate gene approach 156, 157
central nervous system 37–51
chromatin 166, 171–173
cocaine-and amphetamine regulated tran-
script (CART) 21, 22, 57, 60, 85, 121, 124,
130, 131
corticosterone 18, 38, 39
cytokine 19, 81–89, 143, 144, 151
cytokine in energy metabolism 84–86
cytokine signaling-3 39

D

Darwin 165, 166, 184, 185
db/db mouse 5, 9, 19, 83, 121
diabetes 9, 19, 25, 26, 29, 30, 38, 39, 111, 122,
134, 158, 159, 174, 175, 182
dietary habit 167
DNA microarrays 24, 25
dopamine 43
dorsal medial nucleus 38, 54

E

energy balance 9, 11, 15–20, 26, 39, 45–46,
81, 84–86, 95, 122, 134, 144, 146, 168, 174
epigenetic inheritance hypothesis 165–189
epimutation 173, 174
evolution 165, 166, 184

F

fa/fa mouse 5, 29, 121
fatless mouse 111–119
feeding behavior 5, 9, 19, 21–23, 38, 44–46,
57, 77, 85, 86, 92–95, 99–109, 122, 123, 126,
129, 130, 131, 134, 143–146
folate 183, 184
food restriction 18, 19, 24, 60, 111, 126, 147,
178, 179
Fos 2, 7, 8, 10, 76

G

galanin 53, 54, 59, 61
galanin-like peptide 53–64
gene expression 24, 25
genetic factor 16, 17, 26–29, 147, 155–189
genome-wide scan approach 157–159
ghrelin 1–11, 37, 42–46, 65–80, 95, 96,
99–109, 121, 122, 133–135
GHRP-6 5, 6, 8, 67
gonadotropin 30, 60, 125
gonadotropin-releasing hormone 53, 56–58,
60, 122–127, 130, 131, 133, 134
growth 121–142
growth hormone 37, 40–46, 53, 54, 65–80,
99–109, 121, 123, 131–135, 144

growth hormone-releasing hormone 7, 53,
65–77, 99, 100, 107, 123, 132–134
growth hormone secretagogue 1–14, 37–51,
95, 133
growth hormone secretagogue
receptor 37–51, 67, 69, 74–76, 95, 99,
100, 102

H

11 β -hydroxysteroid dehydrogenase
type 1 39
hypothalamus 1–14, 16–28, 38–42, 45, 46,
53–61, 65–70, 76, 77, 85, 86, 91–95, 100,
102, 104, 106, 107, 122–128, 130, 131,
133–135, 144, 145, 148

I

immunity 18, 81–89
imprinted gene 172, 173, 181–184
infertility 18, 60, 127
inflammation 81–86
insulin 8–11, 25, 26, 30, 38, 39, 111–117, 122,
134, 145
insulin growth factor-1 40, 42, 106, 107
interaction of genes and environment 169,
170
interleukin-1 83
interleukin-2 144
interleukin-6 83, 85, 86
interleukin-8 82
IRS-2 111, 115–117

L

lactation 91–98, 122
Lamarck 165, 166, 177, 184, 185
leptin 1–35, 38, 45, 46, 53, 56–58, 60, 81–89,
91–95, 107, 111–153
leptin and human obesity 27–30
leptin receptor 19–23, 28
leptin-sensitive brain network 1–14
leukemia inhibitory factor 82, 83
lipodystrophy 111–118
lipogenesis 85
luteinizing hormone 39, 57, 58, 60, 121, 123,
124, 126–128

M

macrophage colony-stimulating factor 82,
83
macrophage inhibitory factor 82, 83
macrophage-like activity of adipose cells 84
maternal effect 174–176
MC-4 receptor 21, 29, 30, 129, 130, 155
medial preoptic area 53

melanin concentrating hormone 21, 22, 30,
91, 95, 145
melanocortin 2, 121, 129, 130
 α -melanocyte stimulating hormone 21, 22,
29, 30, 57, 121, 122, 124, 129, 130, 131, 145
MK-0677 37, 40–45
mobile element/transposon 180, 181
motilin 101, 102
mutations associated with human obe-
sity 28, 29

N

neural circuit regulating body weight and
metabolism 1–35
neuronal “metabolic imprinting” 174–176
neuropeptide Y 2, 3, 5–7, 9, 21–23, 37–39, 67,
69, 70, 74, 76, 85, 91, 95, 99, 106, 107, 121,
123–130, 132–135, 145

O

obesity 11, 15–19, 25–30, 38, 45, 106, 118,
122, 123, 126, 129, 133, 144, 155–163,
167–171, 177, 182, 184
ob/ob mouse 5, 9, 16–19, 21, 22, 24–26, 60,
83, 84, 113–117, 121, 123, 127, 129, 130
Ob-Rb 19, 20, 23, 28, 53, 57, 58, 91–94, 127,
131
orexin 95, 121, 122, 131, 145

P

paraventricular nucleus 2, 3, 21, 22, 56–58,
66, 70, 131
paternal effect 176
peroxisome proliferator-activated
receptor 170
Pima indian 27, 158
pituitary 43, 44, 53–66, 77, 123, 124
positional cloning 159
pregnancy 91–99, 183, 184
prepromotilin-related peptide 99
prohormone convertase 1 (PC-1) gene 29,
155
prolactin 38
proopiomelanocortin (POMC) 5, 7, 22, 29,
53, 56, 57, 60, 85, 122, 127, 130, 133, 155
psychiatry 143–153
pyriform cortex 22, 23

R

reproduction 121–142

S

schizophrenia 143, 144, 147–149, 151
sexual behavior 53

sexual maturation 125–127
sleep regulation 99–109
somatostatin 40, 65–72, 75–77, 99–102, 106,
107, 132
starvation 17, 18, 21, 168, 177, 185
stearoyl CoA desaturase 25
sterol-regulatory-element-binding protein
(SREBP) 24, 25, 111–117
suprachiasmatic nucleus 38
syndrome X 38, 118

T

testosterone 39
therapy 29, 30, 40, 42, 45, 113, 117, 118

thrifty phenotype 168, 169, 174
thyroid hormone 18
transgenerational effect 177–180
transposon (cf. mobile element)
tumor necrosis factor- α 39, 83–86

U

UCSNP-43 159
uncoupling protein 157

V

vasopressin 59, 60
ventromedial nucleus 54, 70, 74, 131
visceral fat 39
