

Index

5-hydroxy methyl furfurals, 65

A

Acceptable daily intake, 313
Acetic acid, 67, 68
Activated charcoal, 65
Agro-residues, 39–46, 48, 49, 51–54, 56, 57
Alcohol, 310
Aliphatic acids, 72
Alkanine processes, 16
Ammonium hydroxide, 73
Ammonia Fibre Explosion (AFEX), 21
Analytical method, 245, 248, 249, 259, 260
Antimicrobial action, 327, 328, 333, 335
Antioxidant, 313
Arabitol, 312
Autohydrolysis, 10–13, 16, 23, 26

B

Batch process/operation, 236
Batch systems, 166, 170, 172
Bioenergetic(s), 206, 214, 216, 218–220
Biomass, 64
Biorefinery, 292, 295, 298, 301–303
Biosensor, 259
Birchwood, 66
Boronic acid, 72
Bulking agent, 313

C

Calcium hydroxide, 73, 74
Calcium hydroxide overliming, 65
Caloric value, 310

Candida guilliermondii, 206, 208, 210–212, 216–220, 232, 240
Candida tropicalis, 235, 240
Carbohydrates, 310
Cellulose, 64
Charcoal, 72, 74
Chromatographic separation, 352
Chromatography/chromatographic, 233, 234
Continuous fermentation, 161, 170, 181
Continuous process/operation, 236
Cooling effect, 313
Corn cob, 66
Corn fiber, 66, 71
Corn stover, 72

D

D-arabinose, 66
Debaryomyces hansenii, 206, 212, 213, 216, 219, 220, 232, 238
Decanol, 72
Deconstruction, 3
Depolymerisation, 65
Detection method, 248, 252, 256
D-galactose, 66
D-glucose, 66
Diabetics, 309, 315
Dietetic usage, 332–333
Diets, 309, 315
Dilute acid hydrolysis, 11–13, 26, 28, 39–41, 44–46, 48–57
Direct implication of microorganisms, 65
D-mannose, 66
D-xylitol, 245–260
D-xylose, 66, 311

E

Endothermic heat, 313
 Enzymatic hydrolysis, 4, 10, 11, 22, 25
 Enzymatic synthesis, 193, 194, 196, 197,
 199–202
 Ethanol, 64
 Eucalyptus, 72
 Evaporation, 65

F

Fed-batch systems, 183
 Fermentation, 68, 268–270, 278–281, 285, 286
 Ferulic acid, 67
 Fluidized bed reactors, 161, 174, 176, 177,
 182, 183
 Food, 309
 Formic, 70
 Formic acids, 67
 Fractionation, 3, 4, 10, 17, 18, 23, 25, 26
 Fractionation selectivity index, 25
 Furan, 68, 72, 74
 Furan derivatives, 67
 Furfural, 68
 Furnans, 70

G

Genomics, 77
 Glucose dehydrogenase, 199
 Guaiacol, 67

H

Health, 309
 Heat of solution, 310
 Hemicellulose, 3–7, 9, 10, 14–23, 25, 26, 28,
 64
 Hemicellulose hydrolysate, 268, 270, 273,
 275, 276, 279, 283, 311
 Hemicellulose hydrolysis, 15
 Hemicellulose/hemicellulosic hydrolyzate(s),
 206, 211, 216, 218, 221, 233,
 237, 238, 240
 Hemicelluloses fractionation, 4, 10
 Hydrolysis, 3–5, 10–13, 15–18, 20, 21, 24, 25
 Hydrothermal treatments, 10
 Hydroxymethyl furfural, 74

I

Immobilization, 77, 172, 174–182
 Inhibitors, 66
 Inorganic salts, 10, 18, 27, 28

In situ coenzyme regeneration, 199
 Ion-exchange resins, 65
 Ionic liquids, 10, 18, 27, 28

L

Laccase, 65, 77
 Levulinic acid, 72
 Lignin, 64
 Lignocellulose/lignocellulosic(s), 64, 206, 218
 Lignocellulosic materials, 4, 7, 14, 17, 133,
 136, 139, 156, 199

M

Maillard reaction, 312
 Mannitol, 312
 Mass production, 268
 Material balance(s), 206, 207, 210, 211,
 216–218
 Medical applications, 335–338
 Membrane based separations, 65
 Microorganism, 68, 109, 110, 115, 124

N

Naphthalene-2-boronic acid, 72
 Neutralization, 65, 73

P

Pachysolen tannophilus, 206, 212, 216, 232
 Packed bed reactors, 161, 165, 174, 176,
 181, 182
 Pectin, 66
 Pentiol, 64
 Pentitol, 311
 Peroxidases, 77
 Peroxidases applications, 65
 Phenolic, 70
 Physicochemical properties, 311
 Polymers, 72
 Posthydrolysis, 11, 12, 14, 16, 17, 22,
 25, 26, 28
 Pretreatment, 39, 40, 44, 46, 48, 54,
 55, 57
 Proteomics, 77

R

Reactor design, 41
 Reducing power, 208, 212, 214, 218, 221
 Rice straw, 66

S

- Selectivity, [17](#), [22](#), [25](#), [26](#)
- Semi-aerobiosis/semi-aerobic, [206](#), [208](#), [212](#), [215](#), [218](#), [220](#)
- Sepa beads, [77](#)
- Shelf life, [312](#)
- Sodium hydroxide, [73](#)
- Solid (super) acids, [17](#), [27](#)
- Solid fraction, [15](#), [26](#)
- Solvent extraction, [65](#), [72](#)
- Sorbitol, [312](#)
- Spectroscopy, [248](#), [249](#), [255](#), [256](#)
- Spruce, [66](#)
- Spruce acid, [75](#)
- Statistical approaches, [133](#), [136](#)
- Steam explosion, [10](#), [14](#), [27](#)
- Steam stripping, [65](#)
- Sucrose, [309](#)
- Sugar, [309](#)
- Sugarcane, [16](#)
- Sugarcane bagasse, [66](#), [193](#), [194](#), [199–201](#)
- Supercritical fluids, [10](#), [20](#), [27](#), [28](#)
- Sweetener, [309](#)
- Systems Biology, [77](#)

T

- Thermochemical conditions, [66](#)

V

- Vanillin, [68](#), [70](#)

W

- Wet oxidation, [22](#)
- Wheat straw, [71](#)

X

- Xylan, [3](#), [5](#), [6](#), [9](#), [22](#), [23](#), [25](#)
- Xylanase, [23](#)
- Xylitol, [3](#), [4](#), [7](#), [10](#), [11](#), [14](#), [16](#), [21](#), [26](#), [64](#), [193–197](#), [199–202](#), [268](#), [269](#), [271](#), [272](#), [278](#), [280](#), [281](#), [283](#), [284](#), [287](#), [292–295](#), [297](#), [300](#), [309](#), [326](#), [328](#), [329](#), [333](#), [336–338](#)
- Xylitol bio-production, [133](#), [136](#), [139](#), [150](#), [151](#)
- Xylitol crystal(s), [232](#), [233](#), [236](#), [237](#)
- Xylitol crystallization, [232](#), [234](#), [238](#), [240](#), [241](#)
- Xylitol dehydrogenase/XDH, [208](#), [211](#), [212](#)
- Xylitol formation, [208](#), [211](#), [212](#), [216](#), [217](#), [219](#), [220](#)
- Xylitol production, [109–125](#), [128](#)
- Xylitol recovery, [232–234](#), [239](#)
- Xylitol separation, [234](#), [237](#), [238](#)
- Xylo-oligosaccharides (XOS), [16](#), [21](#)
- Xylose, [3–5](#), [8](#), [9](#), [12](#), [18](#), [20](#), [21](#), [24](#), [26–28](#), [65](#), [68](#), [292](#), [296–300](#), [302](#)
- Xylose reductase (XR), [194](#), [195](#), [196](#), [208](#), [211](#), [212](#)
