

Subject Index

- ADAM questionnaire 112
Adult offspring 9, 10
Ag(e)ing 56, 67, 104, 106–108, 110, 112, 127, 129
Age at first (child) birth 3, 117, 120, 122–128
Age at last birth 117, 120, 122–126
Alzheimer disease 111
Anthropoid 75–77, 80, 84
Apolipoprotein B 44
Apolipoprotein E 44, 45, 56
- Baboon 91–96, 98
Behaviour 59–60
British Aristocrats Study 1–5
- Cardiovascular disease 111
Care taker 80–82, 84, 86
Care taking 75
Care 76, 78–80
Centenarians 39, 43–46, 48–49, 51, 55–56
Childbearing 8, 50, 67–68, 117–118, 121, 125–127
Childhood 65
Chronic disease 129, 132–134, 137
Cognitive function 104, 110
Cohort survival history 129, 131, 134, 136–139
Corticosurrenal hormone 81
- Demographic selection 44
Disposable soma 1, 51, 127
DNA Damage 9, 12–13, 26
Dutch Longitudinal Study among the Elderly (DLSE) 129, 132–138
- Education 117, 119–124, 126, 128
Environment 4–6, 33, 35, 39, 43, 60
Environmental factors 45, 49, 52, 104
Estrogen(s) 81, 103, 109
- Fat Mass 109
Fertility 2–5, 51, 59, 61, 63–64, 66, 71, 92, 117, 121–122, 124, 126, 138
Follicle stimulating Hormone (FSH) 105
Functional limitation 129, 132–133, 137–138
- Gambia 63, 69, 71
Gambian(s) 59, 61–62, 64, 67
Gender 34, 36, 39
Genes 43, 49–52, 55–56, 82–83, 86
Genetic adaptation 60
Genetic contribution 33, 38
Genetic damage 10
Genetic factors 45, 49, 52, 104
Genotype 5–6
Grandchildren 94–95, 99–100
Grandmother 68–70, 91, 94–95, 99
Growth 59, 61, 63, 65
- Health indicator 135–136
Health status 130, 132, 138
Healthy Aging 105
Hormonal replacement 103
Hypothalamus 104
- Infant dependency 94, 97–99
Infanticide 64–65
Inheritance of longevity 33–34, 36–40

- Late parenting 7–9
 Leptin 109
 Libido 107
 Life expectancy 16–17, 24, 35, 52–54, 80, 98, 129–132
 Life history 2, 6, 59–62, 63, 68, 71
 Life span 18–27, 33–34, 43, 51–55, 59, 61, 69, 103
 Life style 35
 Lion 91–96, 98
 Longevity 2–5, 7–11, 14–15, 33–39, 43, 45–47, 50–51, 53, 55, 62, 104, 112, 117–118, 125–127, 139
 Longitudinal Aging Study Amsterdam (LASA) 129, 131–137
 Luteinizing Hormone (LH) 104–105
- Marital status 119, 120
 Marriage 66
 Maternal age 11–12, 14–18, 23, 26–28, 49
 Maternal effect 36–38
 Maternal mortality 64, 68
 Maternal survival 94
 Maternity 92
 Menopause 50–55, 59, 67–69, 91, 93–94, 97–100
 Mortality risk 5
 Mortality 59, 61–62, 65, 71, 81–87, 92, 103, 117–119, 121–122, 124–128, 129–133, 136–138
 Mutation 7, 12–15, 27
- Natural selection 55, 82, 86
 Norwegian census 117–126
- Offspring 22, 55, 75, 77–78, 80, 82, 84, 85, 94, 97, 99, 100
 Offspring longevity 10–12, 14, 16–17, 28, 36
 Osteoporosis 109
- Parental longevity 36
 Parental phenotype 36, 39
 Parity 117–118, 120, 122–123, 125–126
 Paternal age 9–12, 14–19, 20–26, 28
 Paternal effect 36–38
 Perinatal mortality 64
 Primate 75–77, 80–82, 84–85
 Prostate disease 111
 Puberty 65–66
- Rate of aging 50, 55
 Reproduction 1, 51, 61–63, 67–69, 79, 92–93, 95–96, 99, 118, 126–127
 Reproductive factors 50
 Reproductive maintenance 51
 Reproductive senescence 91, 93–94, 97–98, 100
 Reproductive success 49
- Sarcopenia 108
 Self rated health 129, 132–133, 135–137
 Sex differential 129, 136, 138–139
 Siblings 45–46, 48, 64, 67, 78
 Socio-economic status 2–5, 35
 Somatic maintenance 1, 51, 127
 Stress 81–82, 86
 Study design 37–39
 Survival 40, 51–52, 75–86, 95–96, 129–130, 134–138
- Testosterone 103–104, 107–112
 The Netherlands 129, 130, 135
- Valserine 33, 35
- X Chromosome 7–8, 13, 27, 28, 40, 51–52, 66
- Y Chromosome 13
