# Glaucoma Update

International Glaucoma Symposium,  
Nara/Japan, May 7-11, 1978

Editors: W. Leydhecker, G. K. Krieglstein

1979. 48 figures, 27 tables. XII, 224 pages  
ISBN 3-540-09350-8

With contributions by numerous experts

The world's foremost experts on glaucoma describe their most recent discoveries concerning the early diagnosis and treatment of this sinister disease. The emphasis of this meeting was on discussion between the participants following each paper. The result is a lively and critical dialogue on a number of interesting topics, such as the ones below:

- The significance of intraocular pressure on the loss of the visual field due to glaucoma
- Ocular hypertension
- Is loss of vision due to glaucoma predictable?
- How to treat congenital glaucoma
- Observer variation in different investigative methods in the early diagnosis of glaucoma
- New procedures with computerized perimeters
- Advances in the pharmacotherapy of glaucoma, particularly with beta-blocking agents
- Evaluation of success in glaucoma surgery

*Glaucoma Update* contains insights no serious ophthalmologist will want to disregard.

## Clinical Anatomy of the Head

**Neurocranium - Orbit - Craniocervical Regions**

Translated from the German by R. R. Wilson, D. P. Winstanley  
1983. 388 color photographs and 189 diagrams. XIV, 489 pages  
ISBN 3-540-11014-3

**Contents:** Synopsis of the Skull. - Diploic Veins, Meninges and Scalp. - Orbit and Contents. - Anterior Cranial Fossa, the Approach to the Orbit and the Ethmoid Bone. - The Floor of the Orbit. - Pituitary Region and Anterior Cranial Fossa: Approaches via the Cranium. - Transnasal Approach to the Pituitary Region. - Cisternae and Vessels of the Pituitary and Diencephalon. - Cavernous Sinus and Trigeminal Ganglion. - Cerebral Ventricles of the Anterior and Middle Cranial Fossae. - Floor and Contents of the Middle Cranial Fossa. - Midbrain and Adjacent Structures. - Posterior Cranial Fossa and Contents. - Craniocervical Junction. - Skull: Data for Computed Tomography. - References. - Subject Index.

*Clinical Anatomy of the Head* is an unusually instructive, full-color atlas emphasizing the neurocranium, the orbita and craniocervical transitional regions. The result of cooperative efforts involving leading clinicians, it provides neurosurgeons, neuroradiologists, neuropathologists, ophthalmologists and otorhinolaryngologists with a practice-oriented anatomical foundation for their work. The presentation is based on investigations undertaken with the aim of clarifying problems of immediate interest to clinicians today. The carefully selected full-color photographs are supplemented by drawings and tables showing mean and limit values as well as structural variants.

## Computer Reformations of the Brain and Skull Base

**Anatomy and Clinical Application**

By R. Unsöld, C. B. Ostertag, J. DeGroot, T. H. Newton  
1982. 237 figures including 76 plates in color. VI, 234 pages  
ISBN 3-540-11544-7

**Contents:** General Considerations. - Orbit and Paranasal Sinuses. - Anterior Cranial Fossa. - Temporal Lobe and Insula. - Sella, Pituitary Gland, Suprasellar Cistern, and Parasellar Area. - Supratentorial Periventricular Structures. - Quadrigeminal Cistern. - Occipital Lobe. - Prepontine and Cerebellopontine Cisterns. - Cerebellum and Fourth Ventricle. - Lower Brain Stem, Cisterna Magna, Posterior Skull Base. - Index. I. - Index. II.

The first guide to the optimal use of computer reformation in almost every conceivable plane of the brain and skull base regions is provided in this book. It contains detailed descriptions of normal anatomy in the clinically most important section and reformation planes and compares them with normal CT anatomy. Diagnostic techniques and approaches are then described and illustrated on the basis of case histories.

Functional and pathologic anatomy of the cranial compartments is covered with a view toward localizing the symptoms most often encountered in clinical practice. The optimal choice of section and reformation plane prior to radiologic examination itself is facilitated by an index of clinical signs indicating the location of the suspected lesion or pathologic process. A brief description of common surgical approaches is also provided to allow radiologists to correctly interpret lesions resulting from earlier operations.

With its wealth of information, concise presentation and handy format, this book will prove an indispensable manual for work at the light box and at the CT console.
