Entropy, Environment and Resources

An Essay in Physico-Economics

With the cooperation of L. Freytag

Translated from the German by I. Pellengahr

1987. 33 figures. XII, 205 pages. Hard cover DM 78,-.
ISBN 3-540-18248-9

The special features of the book are that the authors utilize a natural scientific variable, entropy, to relate the economic system and the environment, that environmental protection and resource use are analyzed in combination, and that a replacement of techniques over time is analyzed. A novel aspect is that resource extraction is interpreted as a reversed diffusion process. Thus a relationship between entropy, energy and resource concentration is established.

The authors investigate the use of the environment both as a supplier of resources and as a recipient of pollutants with the help of thermodynamic relationships. The book therefore provides a new set of tools for workers in the field.

R. Pethig, University of Oldenburg;
U. Schlieper, University of Mannheim, FRG (Eds.)

Efficiency, Institutions, and Economic Policy

Proceedings of a Workshop held by the Sonderforschungsbereich 5 at the University of Mannheim, June 1986

1987. 21 figures. IX, 225 pages. Hard cover DM 75,-.
ISBN 3-540-18450-3

This volume addresses the issue of efficiency and institutions from different angles. First, the efficiency of modern welfare states is analyzed on a general level where topics like social justice, redistribution and rent seeking are studied in an environment of pressure groups and self-interested politicians (papers by Streit, Schlieper, Wickström). Second, several papers deal with more specific issues like intergenerational transfers in a social insurance system, the efficiency of law, and contractual arrangements in the labor market (Witt, Rowley and Brough, Monissen and Wenger). Third, allocation procedures for nonexclusive public goods are analyzed (Güth and Hellwig, Pethig).
