# Laser Spectroscopy of Solids

Editors: **W.M. Yen, P.M. Selzer**

1981. 117 figures. XI, 310 pages. (Topics in Applied  
Physics, Volume 49)  
ISBN 3-540-10638-3

## Contents:

G. F. Imbusch, R. Kopelman: Optical Spectroscopy of  
Electronic Centers in Solids. – T. Holstein, S.K. Lyo,  
R. Orbach: Excitation Transfer in Disordered Systems.  
– D.L. Huber: Dynamics of Incoherent Transfer. –  
P.M. Selzer: General Techniques and Experimental  
Methods in Laser Spectroscopy of Solids. – W.M. Yen,  
P.M. Selzer: High Resolution Laser Spectroscopy of  
Ions in Crystals. – M.J. Weber: Laser Excited Fluores-  
cence Spectroscopy in Glass. – A.H. Francis, R. Kopel-  
man: Excitation Dynamics in Molecular Solids.

Recent applications of tunable-laser-based spectroscopic techniques to the study of optical properties of insulators are presented in this volume. Emphasis has been placed on new experimental findings and theoretical advances in our understanding of the static and dynamic properties of optically excited states in organic and organic crystals as well as amorphous materials. The areas dealing with relaxation and energy transfer in the condensed states are given special attention.

An introductory chapter summarizes the status of classical spectroscopy in insulators. Theoretical reviews of the microscopic and macroscopic aspects of optical energy transfer in solids are integral parts of this volume. Experimental methods are then reviewed comprehensively. Finally, concise and up-to-date summaries are given of the experimental status of laser spectroscopic studies in crystals, glasses and organic materials.

This volume should serve as an introduction to laser spectroscopy of solids to people beginning in this field, and as a concise and comprehensive compendium of work in this area to veteran spectroscopists.

## Phonon Dispersion Relations in Insulators

1979. 162 figures in 271 separate illustrations. VIII, 241 pages (Springer Series in Solid-State Sciences, Volume 10)  
ISBN 3-540-09399-0

**Contents:** Summary of Theory of Phonos: Introduction. Phonon Dispersion Relations and Phonon Models. – Phonon Atlas of Dispersion Curves and Densities of States: Rare-Gas Crystals. Alkali Halides (Rock Salt Structure). Metal Oxides (Rock Salt Structure). Transition Metal Compounds (Rock Salt Structure). Other Cubic Crystals (Rock Salt Structure). Cesium Chloride Structure Crystals. Diamond Structure Crystals. Zinc-Blende Structure Crystals. Wurtzite Structure Crystals. Fluorite Structure Crystals. Rutile Structure Crystals.  $ABO_3$  and  $ABX_3$  Crystals. Layered Structure Crystals. Other Low-Symmetry Crystals. Molecular Crystals. Mixed Crystals. Organic Crystals. – References. – Subject Index.

## The Theory of Magnetism I

Statics and Dynamics

1981. 58 figures. XV, 300 pages. (Springer Series in Solid-State Sciences, Volume 17)  
ISBN 3-540-10611-1

**Contents:** History of Magnetism. – Exchange. – Quantum Theory of Angular Momentum. – Many-Electron Wavefunctions. – From Magnons to Solitons: Spin Dynamics. – Magnetism in Metals. – Bibliography. – References. – Subject Index.

Springer-Verlag  
Berlin  
Heidelberg  
New York  
Tokyo

Starting with a thorough historical introduction to the study of magnetism – one of the oldest sciences known to man – through the most modern developments (magnetic “bubbles” and “soap films”, effects of magnetic impurities in metals and “spin glasses”), this book develops the concepts and the mathematical expertise necessary to understand contemporary research in this field.

Volume I treats exchange forces, the theory of angular momentum, proves important theorems concerning the nature of the ground state and excited states, develops theories of magnons, vortices and solitons and gives a survey of the rapidly evolving field of magnetism in metals. The approach is thorough: all important theories are worked out in detail, using methods and notation that are uniform throughout. Footnotes and bibliography provide a guide to the original literature, and a number of problems test the reader's skill.
