# INDEX

---

---

Page numbers in italics denote figures (f) or tables (t).

## A

actinomycin D, 170  
adenovirus, 39, 40t  
adriamycin, 149, 204  
AIDS, 43, 123  
  -like symptoms, 123  
  rhesus monkey model for, 121  
albumin, 19, 70, 94, 115  
  bovine serum (BSA), 150-153, 190  
alkaline phosphatase, 115  
American Cancer Society, 6  
*Ammi majus*, 22  
anti-inflammatory corticosteroids, 118  
apoptosis, 145, 167-171. *See also* cell death  
argon laser light, 27  
athymic mice, 127, 130f, 137  
ATP, 157, 161

## B

Baylor Research Foundation, 15, 18  
*bcl-2* gene, 168-169  
Benniston AC, 97-99  
benzoxazole subunit(s), 58, 60, 63, 71, 75, 87, 89, 98  
benzothiazole, 81  
bipyridine, 154-155  
bis-oxonols, 102  
bityrosine, 151, 152t  
bone marrow purging, 19-20  
bone marrow transplantation, 17, 208-209  
breast cancer, 34, 126  
  BT-20, 32, 155  
  MB231, 36t  
  MB436, 35, 36t  
  MB453, 35t, 36t  
  MCF-7, 32, 35, 126-129, 131-132, 133f, 134f, 135, 136f, 155, 158-163, 165, 172, 176, 177, 178f  
  MDA-MB-231, 155, 158, 160-163, 165  
  MDA-MB-435, 136-137, 139-140  
  preclinical activity of pMC540 against, 124  
  T47D/BT474, 34, 35t, 36t, 155, 158, 163, 165  
busulfan, 110

## C

*c-fos*, 187  
*c-myc/c-myc*, 187-200  
*Camptotheca acuminata* Decaisne, 156  
Cancer Research, 17-18  
CD4, 44-46  
cell death, 97, 170. *See also* apoptosis  
Center for Fast Kinetics Research, 53-54  
Chan T, 39, 121

chemotherapeutic drugs, 76, 187-188  
chemotherapy, 2, 7, 110  
Chester Beatty Institute, 3  
*cis*, 62-63, 75  
  isomer, 76-78, 81, 87  
cyanine dyes, 17, 94  
cyclohexenyl ring, 87  
cycloheximide, 170

## D

daunorubicin, 149  
Davila J, 90, 97  
DBA/2 mice, 112-113, 195  
DETAPAC, 154  
diffusion coefficient, 97  
dihematoporphyrin ether (DHE), 39  
Dixit NS, 69-70  
Dougherty, 22  
Dowben R, 16

## E

echovirus, 39, 40t  
electron transfer reactions, 90-94  
equinine infectious anemia (EIA), 118  
estradiol, 128, 132, 134, 137  
estrogen  
  deprivation, 132-136  
  receptor, 131, 136-137, 155  
ethanol, 65, 68, 72-74, 79, 81, 83, 90  
euchromatin, 172, 175f

## F

factors V, VII, IX, X, XI, 116-117  
feline immunodeficiency virus (FIV), 117-121  
  FIV-infected cats, 47  
feline leukemia virus (FeLV), 118-119, 142  
fetal bovine serum, 18, 34  
fibrinogen, 116  
fibronectin, 8  
Forest E, 16  
Fourier transform infra-red (FTIR) spectra, 63  
Franck B, 28, 57  
Fridovich I, 146

## G

*gag* antigens, 45  
Gersman, 146  
Gilbert DL, 146

Glucksmann A, 167  
 gp120, 44, 150  
 Grindey GB, 4  
 Gulliya KS, 54  
 Günter WHH, 90, 98, 102

## H

Hamburger AW, 4  
 Harriman A, 19  
 hematoporphyrin derivative (HPD), 15-16, 20, 22, 39  
 Herpes simplex virus (HSV), 38, 39*f*, 101, 140  
 hexamethylmelamine, 110  
 hormones, 110  
 human AB serum, 18-19  
 human fibrosarcoma HT-1080 cells, 138-139  
   human immunodeficiency virus (HIV), 39-44, 46,  
   48, 118, 121, 123, 142, 150, 152, 205, 207  
   HIV-infected SCID mice, 47  
 hydrogen peroxide, 148  
 hydroperoxides, 149, 150*t*, 151*t*  
 hydroxyl radical(s), 146, 148-149, 153, 155

## I

immunofluorescence, 122  
 intracellular calcium, 171

## J

Jacobson MD, 168

## K

Kaufmann S, 193

## L

L117, 44  
 L-asparaginase, 110  
 laminin, 8  
 leprosy, 22  
 leukemia, 4, 19  
   human, HL-60, 32, 33*t*, 35*t*, 94-97, 99*f*  
   murine, L1210, 33*t*, 35*t*, 188, 189*f*, 190-191,  
   193-197, 199  
 lipophilicity, 59, 68, 97-100  
 low density lipoprotein (LDL), 65, 66*f*, 67*f*, 68  
 lung carcinoma(s), 32, 110  
 lymphocytic plasmacytic stomatitis, 118  
 lymphoma, 3, 19  
   human, Daudi, 32-33, 34*f*, 35*t*, 153-154, 167-171,  
   187-188

## M

Mackay RA, 69-70  
 magnesium, 157

malignant melanoma G361, 32  
 Marsoni S, 3  
 Matthews L, 15  
 McCord JM, 146  
*mdr1* gene, 159  
 mechlorethamine, 187-188  
 menadione, 146, 153  
 mercury, 1  
 merocil, 28, 31*f*, 32, 126, 145, 153-155, 168-171  
 merocyanine 1, 60, 61*f*, 62*t*, 64, 85*f*, 86*f*  
 merocyanine 2, 75*f*  
 merocyanine 540 (MC540), 17-19, 23, 25-29, 55, 65  
   biocidal activity of, 100  
   cytotoxicity of, 33*t*, 57  
   dimerization of, 95  
   excited state of, 78-79, 82*sc*  
   ground-state structure of, 58-72  
   illumination of, 56, 70, 81, 93-94  
   photophysical properties of, 56, 58, 72-84  
   preactivated (pMC540), 23, 27  
     action of, 145, 192  
     apoptosis induced by, 169-171  
     activity of, in a human tumor cloning assay, 36-  
       49  
     biodistribution of, 113-117  
     cytotoxicity of, 32-35, 112-113, 149-153,  
       155, 188  
     dose(s) of, 32, 37, 111-112  
     effect(s) of, 34, 35*t*, 44-45, 48*t*, 117-121, 126,  
       128, 138-140, 172-178, 185, 188  
     injections of, 134  
     physical properties of, 28-29  
     plasma clearance of, 113  
     preclinical antiviral activity of, 117-121  
     stability of, 29-32  
     toxicity of, in pigs, 116*t*  
     treatment with, 151-152, 176, 177  
   solution of, 68  
   structure(s) of, 31*f*, 60, 64*st*  
   unactivated, 197  
   zwitterionic form of, 63*st*, 82  
 merocyanine dye(s), 55, 60, 65, 67, 70, 81, 85*t*, 88*t*,  
   89*t*, 90, 94, 100, 103, 104*t*  
 merodantoin, 28, 31*f*, 32, 34, 57, 124-127, 131-  
   132, 135-137, 139, 153, 157-158, 163, 164,  
   174  
   action of, 145  
   activity of, in a human tumor cloning assay, 36-49  
   apoptosis induced by, 169  
   cytotoxicity of, 155  
   effect of,  
     on breast cancer cell lines, 36*t*, 126, 134*t*  
     on MCA-7 human breast cancer xenografts, 126,  
       130*t*  
     on mitochondrial morphology, 172-178  
     on tumor invasiveness, 138-139  
     on tumor metastasis, 139-140  
   injections of, 134  
   therapy with, 140  
   treatment with, 176  
 meroxazole, 28, 31*f*, 126, 153

2-methyl-1,4-benzoquinone (MBQ), 90, 91*f*  
methyl viologen, 92  
Meyer-Betz, 22  
mitochondria, 172, 174, 176-177  
mitochondrial morphology, 143, 172-178  
mitotane, 8  
MT-4 cells, 41, 122  
Muggia FM, 4  
multidrug resistance (MDR), 155-159  
multiple myeloma ARH77, 32

## N

National Cancer Institute (NCI), 3, 5-6, 46-47, 54, 57, 122, 203-204  
  screens, 4  
Navelbine, 124  
Newman J, 38  
NIH/3T3 mouse fibroblast cells, 138  
nitrogen mustard, 7  
nitrosourea, 8  
nuclear magnetic resonance (NMR) spectroscopy, 60, 61*f*, 62  
nude mice, 140-141  
  human tumor xenografts in, 125-126  
  MCF-7 breast tumors in, 128-129

## O

oncogenes, 185-187, 192  
  activated, 188  
  chemotherapeutic drugs and, 187-188  
orthosodium vanadate, 37

## P

p24 antigen, 41-43, 47-49, 122  
p53 gene, 169  
*P. berghei*, 15  
paraquat, 146  
partition coefficient(s), 68, 69*f*, 87, 97, 98*f*, 99*f*, 102  
peripheral blood mononuclear cells (PBMC), 42-44  
peroxidation, 146  
peroxisomes, 148  
photobiology, 15  
photodynamic therapy (PDT), 22-24, 26, 94, 96, 203-204  
  photosensitizers, 100  
photofrin II, 20, 129  
photoisomerization, 83-84, 97  
phtalocyanine, 22  
pink dye, 54  
polyene bridge, 58, 82, 87  
polymethine bridge, 60, 63, 65, 74, 87, 88*t*, 94, 101-102  
porphyrin, 22  
preactivation, 20-21, 23-26, 32, 40, 55, 57, 113, 203-205  
  notion of, 56  
  process of, 27, 167, 185

prostate cancer, 186-187  
  DU 147, 32  
proteinase K, 156-157  
prothrombin, 116-117  
proto-oncogenes, 185, 187  
psoralens, 22

## Q

quinone, 153

## R

radioimmunoprecipitation experiments, 44  
*ras*, 187-188  
Redmond RW, 99  
rhesus macaque, 121  
rhodamine, 172, 174*f*

## S

Salmon SE, 4  
selenium, 89-90, 100  
serum bilirubin, 115  
serum transaminase, 115  
Sieber F, 18  
simian immunodeficiency virus (SIV), 42-43, 46, 48, 122, 142  
  SIV-infected monkeys, 47  
  treatment of, infection in rhesus monkey model, 121-124  
singlet molecular oxygen, 54-56, 79, 95  
Sloan-Kettering Institute, 3  
small cell lung carcinoma H-69, 32, 33*t*  
Smart CR, 203  
sodium dodecyl sulfate, 156-157  
streptozocin, 8  
superoxide dismutase (SOD), 146-148, 154-156  
superoxide radical, 148  
syphilis, 1

## T

tamoxifen, 131-132, 133*t*, 134-136  
Taxol, 124, 156  
Taxotere, 124, 156  
thiobarbiturate subunit, 63, 65, 87, 89, 102  
topoisomerase(s) I/II, 8, 124, 155-166, 177  
  -induced cleavage sites, 197-200  
*trans*, 60, 62-63  
  isomer, 76-78  
transition state (TS), planar, 78  
tryptophan fluorescence, 150  
tubular necrosis, 123  
tumor invasiveness, 138-140

## U

University of Tokyo, 3

**V**

valium, 114  
vinca alkaloids, 8, 156  
viremia, 119-120  
vitiligo, 22  
Von Hoff DD, 4, 37  
Von Tappeiner, 22

**W**

Wayne State University, 5  
Wiggs B, 117-118

**Z**

zwitterionic resonance forms, 63-65
