Index

A
Ab initio methods, 147
Ab initio molecular dynamics (AIMD), 150, 156
Ab initio multiple spawning (AIMS), 29
Acetaldehyde, 111
Acetyloximes, 130
Acid–base equilibria, 1
Alcoholates, 3
Aldoximes, 131
Alkenes, epoxidation, Mn-porphyrin catalyzed, 55
Alkylideneimidazoles, 1, 16
1-Alkyl-3-methylimidazolium, 150
AMBER, 32
Amide-pyrazoles, 138
Amino acids, 61
Ammonium ion, 47
AMOEBA, 33
Atoms in molecules, quantum theory, 105
Ayala–Schlegel method, 44
Azolium, 5

B
Balanced redistributed charge (BRC), 36
Basic ionic liquids, 1
Basin hopping (BH), 40
Benzaldehyde, Ti-catalyzed cyanation, 55
Benzaldoxime, 130
Benzimidazole, 136
[(Benzimidazol-1-yl)methyl]-benzamide, 136
Benzisoxazole, 53
Benzoic acid, 12
Benzoin condensation, 5
Binary ionic liquid mixtures, 147
1,3-Bis(2,6-diisopropylphenyl)imidazolium hydroxide, 16
1,4-Bis[(3,5-dimethyl-1-yl)methyl]benzene, 132
1,4-Bis[(pyrazole-1-yl)methyl]benzene, 132
Bis(trifluoromethanesulfonyl)imide, 147
B3LYP, 28
Bond critical point (bcp), 105
Bonds, characterization, 110
Born–Oppenheimer approximation, 103
1-Butyl-2,3-dimethylimidazolium, 151

C
Cage critical point (ccp), 105
CAM-B3LYP, 29
Carbenes, 1
Carbeniophosphanes, 6
Car–Parinello dynamics, 29
CASSCF, 31, 62
Catalysis, 1
C–C couplings, 5
Cellulose, 157
Cellulose-dissolving ionic liquids, 164
Charge-on-spring (COS) model, 34
Charge-shift bonding, 102
Charge-transfer (CT) states, 62
CHARMM force field, 27
Chemical reaction prediction, 102
Chignolin protein (PDB-ID: 1UAO), 41
6-Chloro-2-hydroxypyridine, 127
Chorismate mutase (CM), 28
Climbing-image-NEB (CI-NEB), 42
CO_2 capture, 1
Cocrystallizations, 128
Cocrystals, 124
  ternary, 139

Coherence, 46
Combined distribution function (CDF), 152
Conceptual DFT, 102
Conformational Family Monte Carlo (CFMC), 40
Conformational search, 25
Conformational Space Annealing (CSA), 40
Cope elimination, 51
Coupled-cluster (CC) theory, 28
CR-EOM CCSD(T), 29
Crystal engineering, 124
Cyanooximes, 131
Cyclopentadiene, 53
Cytosine, 61

D
Density-functional theory (DFT), 1, 28, 153
Deoxy Breslow intermediate, 16
1,3-Diadamantylimidazole-2-ylidene 4, 6
Dialkylimidazolium bis (trifluoromethylsulfonyl)imides, 155
1,3-Dialkylimidazolium hydrogen carbonates, 15
Diels–Alder cycloadditions, 51
Diffusion equation method (DEM), 40
4,5-Dihydro-1,3,2-dithiazolyl, 60
1,4-Dihydropyridines, 17
5,5'-Di(hydroxymethyl)furoin, 13
Dimethylamine, 52
Dimethylammonium, 52
Dimethylazudicarboxylate, 53
1,3-Dimethylimidazol-4-ylidene, 16
Dimethylpyrazole, 131
Dinitrobenzoic acid, 140
Dipole-field/QM combination (DF/QM), 43
Disulfide, oxidation, 55

E
Effective core potentials (ECP), 47
Ehrenfest force, 102, 109
  partitioning, 116
Electronic energy transfer (EET), 45
Electronic stress tensor, 102, 104
  eigenvectors, 103
Electronic wavefunction, 107
Electron transfer (ET) reactions, 55
Electrostatic potential, 141
Empirical valence-bond (EVB) method, 31
Energy leveling, 39
Enol to aldehyde tautomerization, 111
Enzymes, 32
EPR, 25
1-Ethyl-3-methylimidazolium acetate, 1, 147
1-Ethyl-3-methylimidazolium bis (trifluoromethanesulfonyl)imide, 153
1-Ethyl-3-methylimidazolium chloride, 53
1-Ethyl-3-methylimidazol-2-ylidene, 10
Evolutionary programming (EP), 40
EXAFS, 46

F
Field-adapted adjustable density matrix assembler (FAADMA), 36
Fluctuating charge (FQ) model, 34
Fluidity, 46
4-Fluoronitrobenzene, 50
Force fields, 25
Formamide, 62
Fourier Transform of Time-Correlation Function (FTTCF) formalism, 60
Fractional number of electrons approach (FNE), 55
Fracture, 111
Free energy perturbation (FEP), 31, 43
Fulvene, 18

G
Generalized solvent boundary potential (GSBP), 37
General liquid optimized boundary (GLOB), 59
Genetic algorithms, 39
GLYCAM06, 32
Glycine, 61
GROMOS, 34
Guanine, 61

H
HOMO–LUMO gap, 29
Hybrid approaches, 25
Hybrid delocalized coordinates (HDLC), 39
Hydroacylation reactions, 12
Hydrogen bonds, 1, 124, 125, 147
Hydroxybenzoic acid, 141
5-Hydroxymethylfurfural, 13
Hydroxypyridine–pyridone tautomers, 127

I
Imidazole-2-ylidenes, 1, 3
Imidazolium-hydroxides, 7

Intermolecular synthon, 127
Interstellar medium, 34
Ionic liquids, 1, 8, 45, 53, 147
Isodesmic reaction, 4
Iso-Nicotinamide, *134, 139*

K
KcsA ion channel, 48

L
Lagrange points, 117
LCCSD(T0), 28
Lone pair, 4

M
Mass spectroscopy (MS), 1
Merck molecular force field (MMFF94), 32
Meta-analysis, 147
Metadynamics, 39
Methanol synthesis, 55
1-Methylcyclopentadiene, 114
5-Methylcyclopentadiene, 114
Methyl-transfer reactions, 52
Migration, 111
Minimum energy pathway (MEP), 42
MM2 force field, 32
Molecular dynamics (MD), 39
Molecular mechanics valence bond (MMVB) approach, 31
Molecular orbital (MO) methods, 31
Molecular polarizability, 60
Molecular simulation, 147
Møller–Plesset perturbation theory (MP2), 153
Monte Carlo (MC), 39
minimization (MCM), 40
Montmorillonite, 16
Multi-reference (MR) approaches, 29
Mutually orthogonal Latin squares (MOLS), 39

N
Nelder–Mead downhill simplex minimization, 37
N-Heterocyclic carbenes (NHCs), 1
Nitrogen activation, Mo-catalyzed, 55
N-Methylacetamide, 62
NMR, 25, 57, 177
Nucleic bases, 61
Nudged elastic band (NEB), 44

O
ONIOM, 35, 57, 61
Organocatalysis, 1
Orotidine 5'-monophosphate decarboxylase, 44
Oximes, 130
2-Oxo-1,2-diphenylethyl benzoate, 12

P
Pairwise distance directed Gaussian function (PDDG), 30
Partitioned rational-function optimizer (P-RFO), 42
PDDG/PM3, 50
Pentamethylbenzoic acid, 133
Peroxynitrite, 52
Perylene radical cation, 30
Phenyloximes, 130
4-Phenyl-1,2,4-triazoline-3,5-dione (PTAD), 51
Photoelectron spectroscopy, 1
para-Hydroxybenzoate hydroxylase (PHBH), 28
Physicochemical properties, 147
Piperidine, 53
Pleurotus eryngii peroxidase, 59
Polarizable dielectric continuum (PDC), 37
Poly-glutamic acid, 61
Potential energy surfaces (PESs), 29
Potential flooding, 39
Potential of mean force (PMF), 43
Potential of mean force surface (MFEP), 43
Pre-catalytic solvent, 5
Proteins, 32
Proton transfer, 1
PSAMD/GAc (Parallel Simulated Annealing Molecular Dynamics using Genetic Crossover with knot theory), 40
Pyrazoles, 131
Pyrazoles, methyl-substituted, 131
4-[(Pyrazol-1-yl)methyl]-benzamide oxalic acid, 138
Pyridines, 127
Pyridine-ylidenes, 1, 17
Pyridinium-ylides, 1, 17
Pyridones, 127
Pyridyl nitrogen heterosynthon, 139

Q
QM/MM, 25
QTAIM, 102, 105, 116

Quadricyclane, 53
Quantum capping potentials, 36
Quantum chemical (QM) approaches, 25
Quantum theory, atoms in molecules (QTAIM), 102, 105, 116

R
Raman optical activity (ROA), 60
Reaction force partitioning, 102
Reaction pathways, 42
Replica-Exchange Monte Carlo-with-Minimization (REMCM), 40
Restricted open-shell Kohn–Sham (ROKS), 29
Ring critical point (rcp), 105

S
SCC-DFTB, 30, 60
Second-density-derivative tensor, 102
Semiconductors, organic, 25
Simulated annealing (SA), 39
Smoothing/deformation search techniques, 39
Solvated macromolecule boundary potential (SMBP), 37
Solvent effects, 25
Solvent shells, 25
Spawning, 30
Spectroscopy, 25
Static quantum chemical calculations, 153
Stetter (Stetter–Michael) reaction, 5
Stiffness, 46
Structure affecting interactions, 147
Supramolecular synthesis, 125
Symmetry Adapted Perturbation Theory (SAPT), 33
Systematic Screening of Conformers (SSC), 40

T
Tabu-Search-based approaches, 41
TDDFT, 29
Tetramethylammonium, 52
Theoretical organic chemistry, 25
Thermodynamic integration (TI), 43
Thiazole-2-ylidene, 4
1,2,3-Trialkylimidazolium salts, 16
Triazole-5-ylidene, 4
Trimethylsulfonium, 52
2,4,6-Tri(tert-butyl)phenol, 7

U
Umbrella sampling (US), 43
Umpolung, 5
Uracil, 61
Urea, 52
UV/Vis, 25

V
Valence bond (VB), 31
Vaporization mechanism, 1
Vibrational circular dichroism (VCD), 60
VUV, 25

Z
Zinc(II)-diamine, 48
Zwitterion, 3
