

Index

A

Absorption spectrum, 150
Anisotropic etching, 32
Antiferromagnetic state, 134
Antiferromagnetic configuration, 141
Antiferromagnetic edge states, 88
Antiferromagnetic order, 35
Armchair, 29, 32
Armchair edges, 44, 145
Atomic force microscope, 4
Attractive direct interaction, 149

B

Backscattering, 21, 62
Band structure, 14
Band-edge excitons, 162
Benzene ring, 40, 53
Bernal stacking, 23, 78, 130
Berry's phase, 20
Bessel functions, 46, 47
Bilayer graphene, 22
Bilayer triangular quantum dots, 78, 130
Binomial coefficients, 66
Bipartite lattice, 116
Bloch's theorem, 16
Blue-shift, 151
Bohr radius, 92
Brillouin zone, 18

C

Chemical vapor deposition, 12
Chirality, 21, 30
Circularly polarized light, 162
Colloidal graphene quantum dots, 31, 159
Conductivity, 120

Configuration Interaction, 103
Coulomb blockade, 32, 36, 52, 120
Coulomb interactions, 93
Coulomb matrix elements, 94, 95, 103
Coulomb oscillations, 32
 C_{3v} symmetry group, 69

D

Dangling bond, 55, 125
Dark transitions, 162
Degenerate energy shell, 62
Degenerate shell, 45, 63, 82, 85
Density Functional Theory, 101
Density matrix, 97
Density of states, 45
Depolarization, 115, 140, 156
Dielectric constant, 92, 94
Dipole matrix elements, 162
Dipole moment matrix element, 147
Dirac electrons, 4, 92
Dirac equation, 20, 48
Dirac Fermions, 9, 46, 146
Dirac Hamiltonian, 46, 50
Dirac point, 53
Dirac spectrum, 147

E

Edge reconstruction, 125
Edge states, 30
Edges, 55
Effective mass, 46
Effective mass approximation, 49
Effective Rydbergs, 92
Electric dipole approximation, 147
Electron–electron interactions, 91

Electron-beam lithography, 29, 32
 Electron-hole interactions, 154
 Electron-hole symmetry, 18, 41, 87, 143
 Electronic charge density, 85
 Electronic correlations, 112, 156
 Electronic density, 64
 Electronic probability densities, 43
 Energy gap, 145
 Exchange interaction, 157
 Exchange-correlation energy, 101
 Exciton binding energy, 116
 Excitonic absorption spectrum, 150
 Excitonic effects, 150
 Excitonic spectrum, 151
 Extended Hubbard model, 122

F

Fermi energy, 85
 Fermi level, 18, 40
 Fermi velocity, 46, 92
 Ferromagnetic configuration, 141
 Ferromagnetic order, 35
 Filling factor, 88
 Four-band tight-binding Hamiltonian, 76
 Four-component spinor, 24
 Four-orbital tight-binding model, 55, 57
 Fractional quantum Hall effect, 92
 Fullerene, 3

G

Generalized gradient approximation, 102, 125
 Generalized Laguerre polynomial, 51
 Ghost states, 48
 Gram-Schmidt process, 68
 Gramm-Schmit orthogonalization, 76
 Graphene, 1, 3
 Graphene conductivity, 6
 Graphene nanoribbon, 59, 62
 Graphene nanoribbon rings, 86
 Graphene quantum dots, 39
 Graphite, 1, 11
 Graphite intercalation compounds, 4, 8
 Graphite quantum dots, 32

H

Half-integer quantum Hall effect, 12
 Hamiltonian matrix, 40, 74, 83
 Hartree energy, 101
 Hartree-Fock approximation, 95
 Hexagonal dot, 40

Hexagonal mesoscopic quantum rings, 81
 Hexagonal quantum dot, 145
 Hidden symmetry, 75
 Hilbert space, 108
 Hofstadter butterfly, 53
 Honeycomb lattice, 32
 Hopping integral, 40, 83
 Hubbard model, 35, 100, 116, 131
 Hund's rules, 142
 Hydrogen passivation, 126

I

Infinite-mass boundary condition, 48, 52
 Integer quantum Hall effect, 7
 Intercalation, 4
 Intermediate band solar cells, 149
 Irreducible representation, 68–70, 72–74

J

Joint optical density of states, 148

K

Kane-Mele Hamiltonian, 58, 76
 Kane-Mele model, 54
 Klein paradox, 29
 Klein tunneling, 7
 Kohn-Sham quasiparticles, 101
 Kramers degeneracy, 59, 77

L

Lanczos method, 107
 Landau level, 7, 49, 52, 53, 68
 Lieb's theorem, 111, 116, 130
 Light-matter interaction, 147
 Linear energy dispersion, 146
 Local density approximation, 102
 Local magnetic moments, 134
 Long-range Coulomb interactions, 122
 Long-range interactions, 114, 124

M

Möbius, 141
 Möbius geometry, 141
 Möbius ring, 86, 87
 Magnetic flux, 53
 Magnetic length, 51
 Many-body configuration, 104
 Many-body effects, 8
 Many-body Hamiltonian, 94, 136

Many-body spectrum, 118
 Mass spectrometry, 159
 Mean-field approximation, 35
 Mechanical exfoliation, 4, 11
 Mott transition, 99
 Mott-insulator, 166

N

Nanoribbon ring, 87, 140
 Nanoribbons, 81
 Nearest-neighbor approximation, 16, 83

O

Optical selection rules, 160
 Optical spin blockade, 154, 158
 Oscillator strength, 149

P

Pair correlation function, 119
 Parabolic dispersion, 91
 Paramagnetic configuration, 141
 Pascal triangle, 66
 Passivation, 55
 Pauli's spin matrices, 46
 Peierls substitution, 53
 Pentagon-heptagon reconstruction, 125
 Phase transition, 131, 166
 Photon, 147
 Pseudospinors, 20

Q

Quantum dots, 29, 31
 Quantum Monte Carlo, 93
 Quantum rings, 132
 Quantum spin Hall effect, 58, 62
 Quasiparticle, 114
 Quasiparticle spectrum, 151
 Qubits, 10

R

Reactive ion etching, 32
 Red-shift, 164
 Reducible representation, 70
 Repulsive exchange interaction, 150
 Ribbons, 29

S

Scanning electron microscope, 5

Self-consistent iteration, 132
 Semiconductor nanocrystals, 40
 Semimetal, 2, 3, 18
 Single-spin filter device, 77
 Singlet exciton states, 162
 Skyrmion, 120
 Spectral function, 122
 Spin blockade, 122
 Spin depolarization, 118
 Spin domain wall, 143
 Spin filtered edge states, 62
 Spin Hall insulator, 141
 Spin phase diagram, 140
 Spin to photon conversion, 154
 Spin-flip excitations, 115, 137
 Spin-orbit coupling, 10, 54, 55, 57, 58, 76, 141
 Spin-orbit matrix elements, 57
 Spinor, 50
 Spinor function, 48
 Spintronic, 136
 Sublattice symmetry, 42
 Sublattices, 40, 65, 81
 Symmetric gauge, 53
 Symmetry operators, 69, 71

T

TB+HF+CI method, 108
 TB+HF+CI methodology, 111
 Terahertz absorption, 154
 Thermal conductivity, 14
 Tight-binding, 14
 Tight-binding Hamiltonian, 40, 78, 87
 Tight-binding model, 39
 Topological insulator, 141
 Transmission electron microscopy, 14
 Triangular cavity, 48
 Triangular graphene quantum dot, 32
 Triangular mesoscopic quantum rings, 79
 Triangular quantum dot, 43
 Trion, 118
 Triplet exciton states, 162
 Tunneling matrix element, 40, 56

V

Van Hove singularities, 46

W

Wannier orthogonal orbitals, 40
 Wigner, 124
 Wigner crystal, 114

Wigner molecules, [114](#)

Y

Young modulus, [14](#)

Z

Zero-energy shell, [48](#), [63](#), [68](#), [79](#)

Zero-energy states, [65](#), [67](#), [75](#), [76](#), [79](#), [80](#), [84](#),
[102](#), [130](#)

Zigzag, [29](#), [32](#)

Zigzag edges, [44](#), [45](#), [102](#), [111](#), [117](#)
