

About the Author

Takashi Negishi

A member of the Japan Academy, professor emeritus of University of Tokyo, former president of the Econometric Society, and former president of the Japanese Society for History of Economic Thought. Major publications include *General Equilibrium Theory and International Trade* (1972), *History of Economic Theory* (1989), and *Collected Essays of Takashi Negishi*, three volumes (1994 and 2000).

Professor Negishi taught and conducted research at Stanford University, the University of Tokyo, the University of New South Wales, the University of Minnesota, and the London School of Economics.

His major contributions range from general equilibrium theory and welfare economics (existence, optimality, and stability), theory of monopolistic competitions (kinked demand curves), and micro foundations of Keynesian macroeconomics to the history of economics. For the details of these contributions, see the *International Journal of Economic Theory*, volume 4, number 2, June 2008: A Special Issue on Social Welfare, Market Equilibrium and Stability in Honor of Professor Takashi Negishi.
