International Master Study Programme Global Change Management (M.Sc.)

The University of Applied Sciences Eberswalde, located in the State of Brandenburg (Germany), close to Berlin, provides since 2006 an innovative Master Study Programme Global Change Management (M.Sc.).

The aim of the programme is to educate young professionals who are able to cope with challenges of natural resource management under global change, developing goal-oriented and science-informed solutions. The emphasis is on both mitigation of and adaptation to the negative effects of global environmental change (such as climate change and loss of biodiversity). Considering Global Change Management as a new cross-sectoral challenge we strive for an adaptive, proactive and precautionary approach to natural resource management.

Partners

The programme is distinguished by the partnership of the University of Applied Sciences of Eberswalde with internationally renowned research institutes as well as application-oriented institutions which contribute various modules specifically designed for this study programme: German Technical Cooperation (GTZ), Germanwatch e.V., Munich Re, Naturschutzbund Deutschland (NABU), Potsdam Institute for Climate Impact Research (PIK), and the Johann Heinrich von Thünen- Institute (vTI).

Career opportunities

Mitigation of and adaptation to global change has become a cross-cutting issue in natural resource management. Correspondingly, there is an increasing need for global change experts who meet the requirements of the national and international labour market, such as

- Land use and forest management as contribution to climate change mitigation
- Adaptation of natural resource use to climate change (e.g.: adaptive management of protected areas, global-change oriented management of development projects)
- Acting as change agent in various kind of organisations (NGOs, companies, public sector)
- Research on global change and sustainability. As a graduate of this programme it is possible to continue your academic career via a doctorate degree programme.
