

# Index

## A

- Adaptive management, 132
- Aggregation, 47–79, 144–147, 198
- Amenity value, 105
- Any-aged management, 110, 206
- Area potentially available, 233
- Artificial regeneration, 200, 214
- Assessment, 9, 31, 33, 44, 46–50, 56, 58–60, 71, 75, 139–143, 233, 273–286

## B

- Balanced structure, 11, 57
- Basal area in larger trees (BAL), 37, 38, 93, 232, 234
- Bilberry, 116–121
- Bimodal diameter distribution, 35–36
- Biodiversity, 3, 20, 30, 55, 56, 58, 86, 112, 114, 119, 132, 157, 158, 190, 243, 244, 246, 252
- Biofuel, 104, 116–119, 122, 123, 125

## C

- Carbon
  - balance, 86, 115–120
  - sequestration, 114, 115, 118, 209, 243
  - sink, 118
  - source, 118
- CCF. *See* Continuous cover forestry (CCF)
- Clear felling, 2–4, 13, 20, 21, 23, 25, 26, 31, 32, 65, 85, 86, 91, 103, 118, 120–122, 129, 130, 133, 137, 167, 184, 186, 189
- Cohort-based model, 230, 231
- Community forestry, 32, 76
- Competitive influence zone, 233

- Continuous cover forestry (CCF), 1–26, 30, 33, 34, 40, 46, 50, 60, 62–65, 67, 69–71, 74–76, 85–126, 129, 130, 132, 134, 138, 139, 158, 159, 167–190, 195, 196, 200, 210, 217, 219, 220, 222, 223, 229–231, 233–237, 244, 267, 273–286
- Cost savings, 187
- Cubic spline, 96
- Cutting cycle, 11, 95, 97, 99, 102, 105, 108, 109, 112–115, 117, 118, 124, 129, 136, 138, 150, 151, 169, 172, 173, 182, 188, 203, 243, 258, 263

## D

- Decision variable, 96–98, 103, 124, 208, 213–215
- Decomposition, 116–118
- Devastating, 23, 168
- Diameter distribution, 6, 8, 9, 11, 15–19, 26, 30, 31, 33–37, 51, 52, 57, 62, 95–98, 101, 103, 106–114, 119, 125, 177, 200, 203–206, 221
- Diameter increment, 92–94, 134, 153, 155, 156, 211, 212, 232
- Diameter increment model, 92
- Diameter-limit cutting, 88–90, 172, 174, 176, 221, 222
- Differential evolution, 98
- Discounting, 24, 95, 100, 101, 118, 120, 178, 179, 196, 199, 243–269
- Discount rate, 24, 25, 95, 98–101, 103, 105, 115, 117, 119, 121, 172, 203, 256, 259, 267
- Disturbance dynamics, 21, 23, 91, 120, 124, 147
- Diversification, 178, 185–186, 190

Diversity, 3, 9, 12, 19–21, 29–76, 86, 91, 104, 105, 114, 120, 121, 133, 146, 186, 208–210, 216, 221, 222, 229, 234, 235, 243, 244, 250, 251, 255, 258–268, 273–275, 278, 279, 286

Dynamically optimized, 170

Dynamic framework, 173

## E

Ecology, 31, 32, 56, 76

Economic analysis, 126, 168, 169, 174, 178, 197, 198, 209, 211

Economic efficiency, 195, 200, 210, 216–221

Economic profitability, 99–101, 104, 114, 207

Economies of scale, 25, 178, 185, 186, 190

Ecosystem services, 1, 30, 275

Equilibrium state, 18

Even-aged forest management, 20, 85, 89–91, 100, 101, 103, 109, 114, 117–121, 129, 138, 181, 196–198, 200, 205–207, 210–223, 243, 244, 246

Even-aged management, 85, 89, 100, 101, 103, 117–121, 196–198, 206, 207, 210, 214, 216–222, 243

Even-aged monocultures, 31, 32, 167

Even-aged silviculture, 122, 175, 246

Evolution strategy optimization, 98

Expansion factor, 231

Extensive forest management, 103, 122, 158

Extraction road, 100, 114, 124, 125

## F

Financial maturity, 26, 107, 171, 178, 182–185, 187, 189

Fire risk, 210–222

Forest gardening, 189

Forest management, 1, 2, 4, 10, 20–24, 56, 60, 85, 86, 89, 90, 103, 120, 122, 124, 129–132, 138, 157, 158, 167, 169–171, 179, 180, 188, 189, 195–223, 230, 232, 234, 235, 243–269, 273, 275, 278, 280–282, 285, 286

## G

Generalized additive model (GAM), 39

Geo-statistic, 30, 278, 283, 284, 286

Gini coefficient, 69–71

GIS, 286

Gradient-based methods, 188

Group selection, 2, 63, 123, 125, 177, 231

Growth and yield model, 91–95, 202, 211, 286

Growth model, 18, 66, 71, 87, 92, 125, 152, 176, 197–199, 205, 207, 209, 232, 234, 236, 250, 268

## H

Habitat, 1, 21, 23, 30, 32, 53, 76, 120, 143, 207, 209, 210, 215, 221, 223, 235, 243, 244, 246, 251

Hartman formula, 115

Harvest event, 9, 13, 18, 19, 31–34, 38, 50, 62–69, 75, 76, 130, 136, 152

Harvesting cost, 24, 25, 95, 100, 103, 112, 172, 186, 187

Harvesting emissions, 116

High thinning, 21, 23, 26, 32, 38, 63, 65, 91, 101, 103, 107, 110, 118, 123

Hollow formation, 235

## I

Industrial timber plantation, 1, 129

Ingrowth, 15, 85, 91, 92, 94, 97, 100, 105, 122, 123, 126, 171, 188

Ingrowth model, 92, 94, 126, 171, 188

Inoptimality loss, 25, 26

Inter-specific competition, 126, 229, 233

Inventory, 5, 50, 71, 91, 92, 211, 248, 273, 275–286

Investment efficiency, 169

Investment efficient optima, 169, 172–173

## J

Johnson's SB distribution, 96

## K

K function, 41, 42

## L

Land expectation value, 24, 25, 203

Level of forest estates, 174

L function, 31, 33, 41, 42, 75

Limitations, 32, 58, 76, 140, 141, 174, 185–189, 204, 230, 233

Low thinning, 21, 23, 63, 86, 88–90, 101, 103, 187

## M

Mapped information, 282–286

Mechanistic model, 231

Merchantability, 235  
 Mixed DBH-height distribution, 38–39  
 Mixed forest, 10, 21, 167, 168, 186, 273  
 Mixed stand, 21, 23, 94, 96, 103–105, 110, 123, 124, 126  
 Model evaluation, 236  
 Modeling approaches, 188–189  
 Monitoring, 57, 71, 90, 233, 274–286  
 Monoculture, 1, 2, 9, 23, 31, 32, 36, 65, 167, 206, 222  
 Mortality, 8, 30–32, 75, 89, 91, 95, 116, 130, 133, 134, 136, 139, 143, 144, 147, 151, 197, 198, 203, 210–213, 217, 218, 223, 230, 231, 234, 245, 250, 269  
 Multifunctional forestry, 87, 118, 122  
 Multiple-use forestry, 122  
 Multi-species forest, 32, 37–38, 47, 55, 63, 66, 76, 273

## N

Natural disturbances, 8, 9, 21, 23, 31, 57, 91, 120  
 Natural forest, 2, 20–24, 38, 56, 74, 131, 157, 182, 186, 187, 222, 275, 282, 286  
 Natural regeneration, 6, 21, 30, 86, 90, 103, 139, 179, 199, 206, 207, 223, 286  
 Nearest neighbor statistics, 31, 54, 75  
 Near-natural forest management, 20–24, 56  
 Nelder-Mead method, 98  
 Net present value (NPV), 24, 25, 89, 90, 95, 97–103, 105, 107, 109, 112, 113, 115, 117, 118, 121, 122, 171, 179, 185, 186, 188, 196, 197, 199, 206, 214, 215, 217, 219–221, 246  
 Non-timber benefits, 87, 110–114, 122, 207, 209, 222  
 Non-timber products, 86, 115, 237  
 Non-timber services, 114  
 NPV. *See* Net present value (NPV)

## O

Old-growth stage, 20–22  
 Opportunity cost, 23, 26, 107, 182, 203  
 Optimization, 94–115, 117, 122, 125, 126, 130–134, 140, 142, 147, 150–159, 169, 171–173, 178, 188, 200, 202–206, 208–210, 213–215, 222, 244, 245, 268  
 Optimization problem, 96, 103, 106, 107, 122, 125, 203, 206, 214

## P

Pair correlation function, 42, 43  
 Particle swarm optimization, 98  
 Penalty function, 115  
 Plantation forest, 21, 24, 25, 103, 190  
 Plantation forestry, 21, 24, 25, 103, 190  
 Plantations, 1, 9, 21, 23–25, 32, 103, 129, 150, 158, 189, 190, 205, 210, 214, 220, 223, 229, 233–235  
 Plenter forest, 3–8, 15, 16, 18  
 Plenter system, 4–6, 8  
 Predefined management strategies, 170  
 Predefined treatments, 169–172  
 Primary forest, 1, 8, 9, 11, 139, 142, 158, 221  
 Processing release, 116

## Q

q ratio, 11, 16, 221

## R

Random forest, 68, 73, 74  
 R archive network, 34, 40, 41  
 R code, 41, 45, 53, 54, 70, 73  
 Recreational value of forest, 86  
 Recruitment in any case, 188  
 Regeneration, 2–4, 6, 8, 9, 11, 18, 21, 23, 30, 75, 85, 86, 90–92, 100, 103–105, 107, 110, 112, 122–126, 129–143, 145–150, 152, 158, 170, 172, 177, 179, 180, 188, 199, 200, 206, 207, 210, 211, 214, 215, 217, 223, 229, 234–235, 237, 273, 286  
 Regeneration simulator, 235  
 Remote sensing, 33, 71, 75, 233, 277, 278, 280–283, 285, 286  
 Resistance, 5, 6, 32, 149, 168, 177, 178, 180, 185–186  
 Reverse J-shaped distribution, 11  
 RFM. *See* Rotation forest management (RFM)  
 Ripley, 31, 41, 44, 46, 75  
 Risk, 7, 23, 32, 130, 142–146, 158, 171, 175, 176, 178, 181, 185–186, 189, 190, 195, 196, 210–222, 243, 244, 267, 279  
 Risk and uncertainty, 178, 186  
 Road side price, 103  
 Rotation, 2, 5, 24–26, 32, 41, 76, 85, 88–101, 117, 118, 129, 130, 132, 137, 138, 142, 167, 170, 171, 175, 177, 179, 180, 189, 190, 198, 199, 214, 215, 217, 220, 222  
 Rotation forest management (RFM), 2, 20–25, 85, 86, 88–90, 100, 103, 120–122, 129, 130, 132, 134, 138, 158, 167–181, 185–187, 189, 190

**S**

SBFM. *See* Structure-based forest management (SBFM)

Scenic quality, 119

Second order statistics, 31, 33, 75

Seed tree method, 86, 103

Segmentation, 112–114

Selection system, 2, 139, 141, 177, 182, 184, 185, 187

Selective cutting, 11, 25, 85, 86, 122, 168

Self-thinning line, 234

SEV. *See* Soil expectation value (SEV)

Shelter wood method, 23, 86, 103

Shelterwood system, 2, 18, 135, 137–140, 148

Silvicultural experiment, 86, 88–92

Simulation, 32, 46, 66–69, 71–74, 95, 96, 112, 113, 126, 131, 140, 151, 152, 159, 188, 202, 205, 207–215, 221, 229, 230, 235–237, 243–269, 285

Single tree model, 198, 230

Single-tree selection, 2, 88–91, 177, 182, 187, 205

Site productivity, 121, 232–234, 237, 268

Size differentiation, 47–49, 72

Size-distance, 233

Soil expectation value (SEV), 179–181, 197

Spatial heterogeneity, 2, 112

Spatial model (spatially-explicit model), 202, 237

Spatial structure, 30, 31, 47, 57, 58, 71, 75, 279

Species dynamics, 110, 123, 125, 126, 130, 144–145

Species mingling, 9, 47–49, 59, 66, 72

Species richness, 30, 55–60

Spruce butt rot, 123
