

Index

B

Beam profile

- beam broadening, 35, 70
- beam deflection, 15, 74, 75
- central moments, 35
- dipole moment distribution function, 41, 63

C

Cluster

- bimetallic, 95
- carbon, 22, 75
- doped, 64
- fullerenes, 67
- germanium, 69
- jellium model, 2, 3, 31
- silicon, 68
- sodium, 2, 3, 64
- water, 62

Cluster source

- dual laser, 76
- gas aggregation, 63
- laser vaporization, 68
- pick-up, 64

Coordinate systems

- body-fixed, 28
- lab-fixed, 71

D

Dielectric properties

- Clausius-Mosotti, 67
- electric dipole moment, 1, 68
- polarizability, 7, 32, 61

E

Experimental setup

- apparatus constant, 14
- collimator, 8
- deflection unit, 9
- electric field, 7, 54, 55, 81, 82, 87
- electric field gradient, 14
- electron impact ionization, 63
- mass spectrometry (MS), 95
- nozzle, 8
- photo multiplier tube (PMT), 89
- photo-ionization, 10
- position-sensitive, 15, 16
- quadrupole mass spectrometry (QMS), 15
- quadrupole trap, 92
- seeded beams, 88
- skimmer, 11
- supersonic, 39
- time-of-flight (TOF), 15, 16, 89–92
- two-wire field, 17
- vacuum system, 10
- velocity, 20

G

Global optimization

- basin-hopping (BH), 23, 24
- crossover, 25
- fitness, 24, 25
- generation, 25
- genetic algorithm (GA), 23
- geometry optimization, 4
- global minimum, 4, 23
- mating, 24
- Monte-Carlo (MC), 91

natural selection, 25
 offspring, 25
 potential energy surface (PES), 23–25
 structure determination, 4, 69, 74

H

Hartree-Fock (HF), 26–30
 Hydrogen-bonded systems, 61

L

Light force
 de Broglie wavelength, 84
 diffraction grating, 85, 86
 interferometry, 82, 84, 86
 standing light wave, 82–86
 Talbot-Lau, 85, 86
 transmission function, 84
 visibility, 85–87

M

Moments of inertia, 3

Q

Quantum chemistry
 density functional theory (DFT), 26
 electron density, 30
 exchange-correlation, 31
 Fock-operator, 27
 Kohn-Sham (KS), 31
 linear response theory, 29
 Moller-Plesset (MP), 27
 orbitals, 26
 Slater determinant, 27
 wave function based methods, 28

Quantum numbers

J, 39, 47, 88
 K, 47, 49, 88
 M, 47, 49, 88
 Ω , 88

R

Rigid rotor
 asymmetrical, 42, 51
 linear, 31
 spherical, 73
 symmetrical

oblate, 48, 65
 prolate, 41, 42, 50

S

Stark effect

adiabatic polarization, 52, 55
 avoided crossing, 52
 chaotic motion, 54, 96
 deceleration, 90
 energy, 1, 2, 23, 36, 38
 floppy cluster
 Arrhenius, 71, 76
 isomerization, 17, 22, 54
 Langevin-Debye, 54, 55
 transition state, 23
 high field seeking, 44, 49
 low field seeking, 36, 46, 51, 54
 rigid cluster
 diagonalization (Hamiltonian), 46, 49
 Euler angle (molecular dynamics simulation), 39, 40
 Euler equations (molecular dynamics simulation), 40
 matrix elements (Hamiltonian), 47, 48
 pendulum, 49, 51
 perturbation theory, 17, 22, 30, 36, 38, 95
 probability density, 53, 54

Stark manipulation

deceleration, 88, 89, 91, 96
 diatomic radical, 88
 light induced fluorescence (LIF), 32, 89, 92
 trajectories, 9, 18, 81, 87

T

Temperature, 13
 nozzle, 12, 13, 55, 61
 rotational, 17, 21, 37, 39, 42, 43, 54, 63
 vibrational, 13, 21, 56, 63
 Transition metal complexes, 65

W

Wade-Mingos, 74

Z

Zintl, 74
