SUBJECT INDEX

- Absorption coefficients, 7
- Abundances,
 - primordial, 102, 137-138
 - see also helium
- Atoms,
 - maximum size of, 8-13
 - see also Bohr atom
- Background radiation,
 - quantum density, 13
- Bohr atom, 3
 - line frequencies, 1
 - size of, 103
 - see also Atoms
- Carbon radio recombination lines, 51, 123-130, 189-201, 203-208, 209-217, 222-223, 280-281
 - link with molecular clouds, 198-199, 206-208
 - low frequency, 10-11, 175-188, 189-202, 203-208, 209-219
 - near HII regions, 4
 - planetary nebulae, 143, 153
 - see also CII Regions
- CII regions, 69, 123-130, 175-188, 189-201, 203-208, 209-217, 222-223, 280-281
 - emission mechanisms, 69
 - location with respect to HII gas, 62
 - near Be stars, 169, 278
- CIII regions, near Be stars, 169
- Clumping, 136
 - Galactic center, 250
 - ISM, 259-265
 - ultracompact HII regions, 89
- Collisional broadening, see pressure broadening
- Compact HII regions, 73-82, 279
 - Alfvén waves, 78
 - association with OH masers, 76
 - definition of, 73
 - density-size relation, 74
 - internal kinematics, 76, 77
 - line to continuum intensity ratios, 74, 79
 - line widths, 74, 81
 - line widths, variation with density, 77, 79
 - magnetic fields in, 78
 - motions with respect to host cloud, 76
 - observed characteristics of, 75
 - pressure equilibrium, 81
 - stimulated emission in, 81
 - turbulence, 77
 - velocity variation with opacity, 76
- Compact planetary nebulae, 155-160
 - definition of, 155
 - distances to, 159
 - electron densities in, 155
- Compton Effect, inverse, 138
- Cosmic background, 138, 204
- Cosmic rays, 219-221, 223
- Decameter wave radio recombination lines, see Low frequency radio recombination lines
- Degeneracy, in angular momentum, 38, 40, 95-96, 278
- Departure coefficients, 7, 37, 40, 42, 44, 47, 87, 94-95, 108, 177, 197-198, 277
 - effect of Lyman lines on, 100-101
 - helium and heavy elements, 47
 - stellar masers, 165
- Diffuse component of the ISM, 259-265, 280-281
- Dust,
 - compact planetary nebulae, 155
 - planetary nebulae, 141
- Electron densities, 189-191, 197, 203-205, 214-217
 - carbon radio recombination lines, 179-186
 - CII regions, 175-188
 - compact planetary nebulae, 155-157
 - determining, 115-120
 - diffuse ISM, 243-247
 - planetary nebulae, 141, 143-147, 149, 152
 - pulsars, 244, 259
- Electron temperature, 64, 107, 189-191, 197, 203-205, 214-217
 - calculation of, 95, 278
 - compact planetary nebulae, 156, 158-159
 - comparison with optical, 93-94, 97, 109
 - diffuse ISM, 243-247
 - Galactic center, 255
 - mmwave radio recombination lines, 99, 161
 - planetary nebulae, 150-151
 - Ori A, 111
 - variation with L/C ratios, 157-158
 - variation within compact planetary nebulae, 158-159
 - variation within HII region, 64, 97, 129
 - variation with emission measure, 96
 - variation with principal quantum number, 96
- Emission measure, 155-156, 189-191, 197, 203-205

- Emission measure, (*continued*)
 - collisional determination, 38,42
 - diffuse ISM, 243-247
 - Lyman lines, 100-102
- Excitation,
 - Lyman lines, 44
 - non-thermal radiation field, 38
 - planetary nebulae, 143
 - radiation, 38
- Excitation rates, 38
- Extragalactic radio recombination lines, 70, 119, 267-275, 282
- Flares,
 - H α in Be stars, 169-173
 - radio recombination lines in MWC349, 161-167
- Galactic center, 249-257, 259-265, 282
 - molecular gas in, 250-251
 - separation of thermal from nonthermal continuum, 255
- Galactic distribution,
 - 3-kpc arm, 231-234
 - diffuse RRL emission, 14-15
 - HII region temperatures, 13
 - ionized gas, 14-15, 225-235, 237-247, 249-257, 259-265, 281-282
 - ionized gas in galactic center, 249-257
 - northern versus southern hemispheres, 229-231, 233-234, 239-240, 282
 - surface density of ionized gas, 229-231
 - spiral structure, 234-235
- Galaxy, the, chemical evolution of, 131
- Heavy elements, 132
- HeII regions, 64, 66
 - location with respect to HII gas, 62
 - see Helium
 - see Helium radio recombination lines
- Helium,
 - abundance relative to hydrogen, 4, 66, 102, 131, 137, 279
 - galactic center, 249-257
 - planetary nebulae, 143
 - variation within HII region, 133
 - velocity with respect to hydrogen, 112
- HII regions, 63, 65-67, 105, 129-130, 237-247
 - age of, 137
 - blister model, 131, 134
 - champagne flow models, 105, 111
 - clumping, 108
 - compact, 73, 83, 279
 - densities of, 115-120
 - distances to, 229
 - expansion of, 109
 - extragalactic sources, 267-275
 - galactic center, 259-265
 - Galactic distribution of, 225-235, 237-247
 - internal kinematics, 66
 - mm wavelengths, 93-102
 - model of DR21, 131-137
 - model of Ori A, 106
 - models of, 60-62, 106, 131-137
 - morphology of, 241-242
 - opacities of, 65
 - relation to molecular gas, 229-231
 - relationship to continuum emission, 241-242
 - surveys, 225-235, 237-247
 - surveys, selection effects, 226-227
 - surveys, sensitivity of, 226-227
 - turbulence in, 109
 - ultracompact, 83-92
 - see Hydrogen radio recombination lines
- Hydrogen, 21 cm line, 203,206
 - towards Cas A, 192, 194, 197, 199
- Hydrogen ionization rate, 200-201, 205
 - local ISM, 219-223
- Hydrogen radio recombination lines
 - diffuse ISM, 14, 243-245
 - early calculations of, 2
 - early searches for, 2-4
 - extragalactic sources of, 267-275
 - first detection of, 2-4
 - frequencies of, 2
 - galactic center, 249-257, 259-265
 - H 0 region, see H 0 regions
 - low frequencies, 10
 - theory, 2, 277
 - Zeeman splitting of, 249, 256
- H 0 regions, 66-67, 123-130, 280
 - distribution of, 126-128
 - internal kinematics, 68
 - ionization of, 69
 - location with respect to HII gas, 62
 - relation to CII regions, 129
 - stimulated emission in, 68
- Infrared emission,
 - cirrus, 219
 - planetary nebulae, 141-149
- Intensity of radio recombination lines, 94-95
 - see Line intensities
- Interstellar dust, 83
 - see Dust
- Lamb shift, 2,7

- Line blanketing,
 - effect on departure coefficients, 102
- Line intensities,
 - conflict with optical observations, 8
- Line profiles,
 - normalization of, 115-120
 - see Pressure broadening
 - see Profiles
- Line widths,
 - compact HII regions, 74,76
 - ultracompact HII regions, 90
 - variation with density, 77,79
- Local ISM, 219-223
 - definition of, 219-220
- Low frequency radio recombination lines,
 - 175-188, 189-201, 203-208, 209-217, 222-333, 280-281
 - α/β intensity ratios, 182
 - frequency separation, 183
 - Galactic center, 259-265
 - history, 9-10, 176
 - models of, 176-177, 181-182, 194-201, 203-208, 214-217
 - observing techniques, 178-180
- Lyman discontinuity, 100
- Lyman line excitation, 277
- Maser effect, 94, 161-167, 197, 278
 - size of stellar maser, 167
 - time variability, 163-167
- Maser radio recombination lines, 153
 - see Maser effect
- Matter ejection, 162
 - Be stars, 169, 278
