

ACKNOWLEDGEMENTS

The typework of the manuscript in several phases has been in the able hands of Mrs. Hanneke Wentholt-Eggels and Miss Kitty Schoute. The figures have been prepared in the technical illustration department by W.T.J. van Kan and J. Keuvelaar and by the photographers J.C. van der Krogt, P.A. Beijlsmit, H.F. Breuker and P. de Meijer. J.M. Brans has contributed an important part as a dedicated literature retriever; Mrs D.J. Weisz-van Limburgh has been a great help in acquiring the publications selected and in correcting the list of references. In the Computer Group Cardiology, R. van Poelgeest, J. Heethaar and G. Rol have dealt with many software problems; the discussions with A.J. Hoelen in the initial stage have proved very inspiring. The timing system for using the X-ray installation as a measurement tool has been realized by the devoted work of J.H.J. Sneek. A. Richtering Blenken has developed essential hardware with great ingenuity. I. van Egmond, C.J. Verleg and J. Rikken have given invaluable assistance in the construction of prototypes. The ventricular casts have been prepared by E. van Dam. The advice on ergonomic problems given by J.H.J.M. Vulker has filled gaps which otherwise would have been pitfalls. I am grateful to dr. W. Herstel and dr. H.R. Marcuse for many discussions and to G.R. van den Broek for correcting the English text. The smooth contacts with the publisher have facilitated the realization of this publication.
