

INDEX †

Acoustic sensor: Howarth

Actuators,
discrete: Das, Duclos
distributed: Anderson, Tzou, Lee,
Baz, Destuynder, Hubbard,
Yang, Duclos

Axial moving media: Yang

Control,
axial moving media: Yang
discrete: Duclos, Das
distributed: Hubbard, Tzou, Lee,
Baz, Duclos, Destuynder,
Yang

Damage assessment: Zimmerman

Electrorheological,
devices: Duclos, Anderson
fluid: Duclos, Anderson, Baz

Gyroscopic system: Yang

Identification: Zimmerman

Modal sensors/actuators: Lee, Tzou

NITINOL: Baz

Piezoelectric,
actuators: Anderson, Tzou,
Lee, Baz, Destuynder,
Hubbard
lamination: Lee
plate: Lee, Hubbard, Destuynder,
Tzou
sensors: Howarth, Hubbard,
Tzou, Lee, Baz, Destuynder,
Anderson
shells: Tzou
strain sensors: Lee, Tzou
theory: Tzou

Precision truss: Das

Sensor,
piezoelectric: Howarth, Hubbard,
Tzou, Lee, Baz, Destuynder,
Anderson

Shape memory alloys,
actuators: Baz

Smart,
structures: Anderson, Zimmerman
materials: Anderson

† Note that the subject areas are mainly cited in the respective chapters indicated by the leading author.

Mechanics

SOLID MECHANICS AND ITS APPLICATIONS

Series Editor: G.M.L. Gladwell

Aims and Scope of the Series

The fundamental questions arising in mechanics are: *Why?*, *How?*, and *How much?* The aim of this series is to provide lucid accounts written by authoritative researchers giving vision and insight in answering these questions on the subject of mechanics as it relates to solids. The scope of the series covers the entire spectrum of solid mechanics. Thus it includes the foundation of mechanics; variational formulations; computational mechanics; statics, kinematics and dynamics of rigid and elastic bodies; vibrations of solids and structures; dynamical systems and chaos; the theories of elasticity, plasticity and viscoelasticity; composite materials; rods, beams, shells and membranes; structural control and stability; soils, rocks and geomechanics; fracture; tribology; experimental mechanics; biomechanics and machine design.

Mechanics

FLUID MECHANICS AND ITS APPLICATIONS

Series Editor: R. Moreau

Aims and Scope of the Series

The purpose of this series is to focus on subjects in which fluid mechanics plays a fundamental role. As well as the more traditional applications of aeronautics, hydraulics, heat and mass transfer etc., books will be published dealing with topics which are currently in a state of rapid development, such as turbulence, suspensions and multiphase fluids, super and hypersonic flows and numerical modelling techniques. It is a widely held view that it is the interdisciplinary subjects that will receive intense scientific attention, bringing them to the forefront of technological advancement. Fluids have the ability to transport matter and its properties as well as transmit force, therefore fluid mechanics is a subject that is particularly open to cross fertilisation with other sciences and disciplines of engineering. The subject of fluid mechanics will be highly relevant in domains such as chemical, metallurgical, biological and ecological engineering. This series is particularly open to such new multidisciplinary domains.
