

AFTERWORD

The 13th Five-Year Plan period is endowed with the extremely prominent historical features of China's economic transformation. Growth, transformation and reform are highly integrated. Economic transformation and upgrading contain enormous development potential and market space. But, the contradictions and risk factors facing economic transformation are increasing day by day. In this particular context, not only structural adjustment is called for, but also structural reform is. Not only demand-side structural reform is called for, but also supply-side structural reform. Therefore, the 13th Five-Year Plan needs to take strongly promoting supply-side structural reform as a major option for economic transformation and upgrading.

The 38 years of reform and opening up have shown that, whether a region or an enterprise, it often wins not at the starting point but at the turning point. At present, facing the structural contradictions of economic transformation, we need to make breakthroughs in the structural reform with greater determination and boldness and blaze a trail in resolve them through structural reform. To adapt to the trend of economic transformation to promote the structural reform during the 13th Five-Year Plan period, the key is to properly handle the relationship between the market, the enterprise and the government, to more liberally allow the market to play a decisive role in the allocation of resources, to further stimulate the enterprise's vitality, to increase more effective

system supply, in order to achieve a crucial breakthrough in economic transformation.

This book is based on my public speaking at home and abroad and my in-depth thinking in the past year or two. The completion of the book was assisted by my colleagues Fang Shuanxi, Zhang Fei, Tan Huaiyu, Li Xuka, Yang Tianying, Chen Wei, etc. Zhejiang University Press has given great support to the editing and publishing of the book, and hereby I would like to express my gratitude.
