25. Until recently, all gold that was ever mined continued to be in circulation. Bullions, ornaments, and artifacts made of gold would be melted down and made into something else, but the gold would not be wasted. It is only in the last couple of decades that the electronics industry has been using gold in quantities too small to be recovered during recycling.

6. In some cases, the mail service even had its own train lines. The Post Office Railway, or the Mail Rail, is a 6.5-mile-long train system under London’s streets between Paddington and Whitechapel that was used to move mail between sorting offices. The underground rail opened in 1927 and service stopped only in 2003. The British Postal Museum is now planning to open part of the route to the public.

7. The Two Penny Blue, to be used on heavier letters, was issued just a few days later. Fewer Two Penny Blues were printed; consequently they are much rarer today.

20. The real risk-free interest rate is the opportunity cost of foregoing consumption (i.e., the rate that must be offered to individuals to persuade them to save rather than consume). The expected inflation rate over the term of the instrument is also something that the lender needs to be compensated for. The Fisher Hypothesis hence says that the interest rate on short-term risk-free securities is given by the sum of the real risk-free interest rate and the expected inflation rate over the term of the instrument. As the inflation rate goes up, the interest rate that has to be offered also goes up accordingly.

Chapter 10

1. Financial intermediaries are businesses that specialize in borrowing funds from people who have saved and lending to people who want to borrow. These refer to indirect financing. Financial markets, on the other hand, refer to direct financing. These are markets in which funds are transferred from people who have a surplus of it (savers) to people who have a shortage (borrowers). Examples are securities markets like the stock market and the bond market.

8. The vote was partly reflective of the polarized politics in Washington. However, temperatures in Washington dropped to single digits that day due to the polar vortex, and the readings in the upper Midwest and Great Lakes regions fell to 30 below zero in some spots. As a result, a lot of the senators were also away from the Hill.
