
Index

A

Absorption kinetics, 310
Additives, chemical, 72
Adiabatic venting, 105–108
Ampt-Green model, 317
Ash particles, 77–78
Asymptotic flux, 250–257
Avogadro number, 6
Avrami–Kolmogorov model, 150

B

Banach–Caccioppoli lemma, 184
Banach theorem, 265
Beavers–Joseph condition, 300
BEM. *See* Boundary element method
Beneficiation, 28
Bingham fluids, 27–34, 53, 73
Blobs, 13, 14, 17, 18
Block copolymers, 5
Blowdown process, 96–117
Boltzmann factor, 22
Bottles, 203
Boundary conditions, 92
Boundary element method (BEM), 196
Brittle-fracture point, 84
Brownian motion, 9, 22
Buried pipeline problem, 113–117

C

Cable-coating, 126
Capillarity effects, 310–331

Capillary rheometer, 128
Catalyst particles, 216
Cellular automata theory, 247
Ceramic melts, 282
Characteristics, method of, 42, 92
Chemical additives, 72
Cheng–Evans theory, 64–65
Classical flows, 132–133, 137–140
Clausius–Clapeyron equation, 155
Clip algorithm, 209, 210, 213
Coal-water slurries (CWS), 25–64
 heterogeneous, 75–79
 homogeneous, 65–69, 79–80
 pipeline flows, 63–64
 sedimentation in, 31–34, 40–61
 shearing in, 31–34
 See also specific parameters
Coalescence, 198–202
Coincidence set, 312
Colebrook–White correlation, 87
Composite materials, 277, 281
Composite velocity, 296
Compressible flows, 63
Compression molding model, 302
Condition number, 56
Connective terms, 179
Conservative flows, 84
Constitutive instability, 128
Contact radius, 199
Convection, 165, 180, 230
Coupled continuity equation, 162
Cracking, 284
Creeping flow, 73, 195

Crystallization, 230
 isobaric, 149–189
 kinetics of, 151, 156–161
 mathematical modeling of, 149
 of polymers, 149
 polypropylene, 149–189
 semicrystals, 153

Curing
 cycle, 282
 infiltration and, 290
 nonisothermal, 291–294

Curve fitting, 53–57

D

Darcy's law, 241, 243, 285, 286,
 289, 297, 309

Deformability, entropy and, 11

Dedegil equation, 32

Degradation process, 27, 69–72

Diaper, analysis of, 307

Diffusion

diffusivity, 308

equation for, 222

Fick's law, 222

motion in, 15

quasi-steady, 231

reptation in, 15

Dilution, viscosity and, 5–10

Dimensional analysis, 14,
 32, 190

Discharge process, 84

Discrete models, 125–145

Drag force, 28–30, 73, 74

Dry region, 286

E

Eckhard number, 205

Effective volume, 6

Ehrenfest equation, 155

Eigenvalue condition, 56

Einstein's formula, 6, 16

Elasticity, 12, 294

Elliptic integrals, 199

Entangled networks, 15, 19–20

Entropy, 11

Error function, 207

Espresso coffee problem, 241–280

Euler equations, 87, 117, 284, 297

Euler method, 209–211

Eulerian–Lagrangian approach, 225

Evolution equation, 136

Exit jet, 93–94

Expansion model, 223

Extrusion process, 125–145

F

Fair–Hatch formula, 320–321

Fanning friction factor, 86

FBP. *See* Free boundary problem

FEM. *See* Finite element method

Fick's law, 222

Filtration, 242

Finite element method (FEM), 30,
 208, 213

Fixed point procedure, 259, 290

Flory temperature, 7

FLUENT code, 84, 100

Fokker–Planck-type equation, 230

Food packing method, 192

Ford approach, 88

Fourier's law, 225

Fourth-generation catalysts, 216

Fracture point, 84

Fragmentation front, 221

Frechet derivative, 53

Fredholm equation, 54, 55

Free boundary problem (FBP), 218,
 219, 283, 309

Friction coefficients, 9, 16, 20

Friction factor, 86, 94–95

Friction, in pipes, 110–113

Froude number, 194

G

Gas bubbles, 277

Gas models, 96–97

Gel-blocking, 308, 321

Generalized solutions, 55

Glass processes, 192–207

Glassy transition temperature, 151

Godunov method, 83, 89, 91

Grain size distribution, 72

Gram matrix, 56
 Granules, swelling, 307–331
 Green–Ampt model, 317
 Gronwall inequality, 330
 Gross-melt factor, 127

H

Hatch–Fair formula, 320–321
 Heat balance equation, 226
 Heaviside function, 135
 Herschel–Bulkley model, 65, 73
 Holder space, 174, 179–181, 220, 233
 Homogenization theory, 247, 300
 Hydrodynamic interactions, 6, 10
 Hydrophile granules, 307
 Hyperbolic curing equation, 288
 Hysteresis, 134

I

Impingement, 150
 Inertial factors, 284–285
 Infiltration, 281, 290
 Injection molding, 126, 288–294, 300
 Instability
 computational, 198
 constitutive, 128
 spurt and, 127–128
 Insulation, 192
 Intrinsic viscosity, 5–10
 Inverse problems, 30
 Ionic strength, 9
 Irrotational flow, 197
 Isentropic flow, 93

J

Jars, 203

K

Kinetic undercooling, 314–315
 Kolmogorov theory, 150
 Kronecker delta, 196
 Kuhn segment, 7

L

Lagrangian derivatives, 166
 Lagrangian displacement, 209
 Latent heat release rate, 184
 Lipschitz constant, 259, 265, 274
 Liquid composite molding, 300
 Liquid structure, 12
 Localized interactions, 21–23

M

Mach numbers, 63, 83
 Machnet code, 84, 94
 Malkin's law, 156
 Mass conservation, 210–213, 284
 Maximum principle, 233, 237, 326
 Melting point, 151
 Melts
 extrusion and, 125–145
 plastics and, 126–128
 polymer, 7, 19–21
 screening, 7, 20
 spurt forms, 125–145
 viscosity and, 20
 Mesh size, 14
 Methane, 110
 Molecular theory, 1–24
 Moulds, 126, 203, 288–294, 300
 Moving layer, 40
 Multigrain model, 218, 219, 221–225

N

Navier–Stokes equation, 34, 162
 conservative form, 87
 nonlinear behavior, 29
 Neck effects, 198
 No flux condition, 313
 No-slip condition, 125, 129–131, 207
 Non-Newtonian fluids, 29, 63, 65
 Nonisothermal flows, 291–294
 Nonlinear equations, 91, 233, 302
 Nonlinear systems, 63–124
 Nonlocal boundary condition, 219
 Nucleation, 150
 Numerical methods, 45–50, 85, 89–92

O

Optical fibers, 192
 Orifices, 94–95
 Overlapping, 13
 Overshoot, 142

P

Parabolic equations, 179–180,
 230, 302
 Parison, glass, 192, 203
 Peclet number, 205
 Percolation, 246–247
 Permeability, 285
 Perturbation methods, 85,
 302
 Phase change method, 150
 Pigging operations, 80
 Pipeline flow, 25–61, 112–114
 Piston-driven flow, 133
 Plateau modulus, 15, 19
 Plunger, 203
 Poiseuille flow, 143
 Polyelectrolytes, 4, 9
 Polymers
 block, 5
 coil size, 7
 cross-linking, 11
 friction coefficient, 9
 hydrodynamic interactions,
 9, 10
 hydrophobic, 21
 intrinsic viscosity, 5–10
 melts, 7, 19–21, 125–145
 molecular theory of, 1–24
 network structure, 11–12
 polymerization, 215–238
 PVT diagrams, 149
 rod-like, 8–9
 temperature and, 225
 viscoelasticity, 12
 viscosizing efficiency, 8
 Polypropylene, 149–189
 Porosity, of bed, 42
 Porous media, 307–332
 Power law fluids, 29
 Prandtl number, 88
 Preforms, 294–299

Pressing, of glasses, 190
 PVT diagrams, 149

Q

Quasi-stationary approximation,
 220, 231

R

Race-tracking problems, 300
 Radiation laws, 173–174
 Random walk, 7
 Rankine–Hugoniot relations,
 85, 117
 Reflection method, 74
 Reflection, of shock, 96–99
 Regularity problems, 230
 Relaxation process, 125–145
 Relaxation times, 12, 15
 REOCARB technology, 64
 Reptation, 15, 17
 Resin transfer molding, 281
 Resistivity, 251
 Retarding effects, 56, 300
 Reynolds numbers, 28, 30, 87, 162,
 194, 286
 Riemann problems, 86, 91, 96, 117
 Riesz theorem, 54
 Rigid preforms, 288–290
 Roe's method, 86, 91
 Rotating viscometer, 31–34
 Rouse model, 20

S

Sand experiments, 56
 Saturation, 313, 314, 315
 Scaling law, 4, 14
 Schauder's theorem, 259, 265, 291
 Schlieren photographs, 93
 Screening, in melts, 7
 Sedimentation, 72, 75
 coal-water slurry and, 31–34
 column, 75
 evolution of, 34–45
 general facts, 28–31
 hindered, 73, 74, 76

pipeline, 34–45
 settling rate, 32, 37, 75, 79
 static, 75–78
 viscosity of, 32
 Seepage, 313
 Self-avoiding walk (SAW), 7
 Semidilute solutions
 scaling law, 14
 screening length, 13
 solvents, 13–19
 Settling. *See* Sedimentation
 SGM law, 154
 Shape memory, 134, 144
 Sharkskin distortions, 127
 Shear stress, 12, 30–34, 131–134
 Shock tube problem, 85, 117
 Shock waves, 85, 93, 94, 97, 99
 Shooting technique, 299
 Shutdown, 68–69
 Sieder–Tate correlation, 88
 Singular system, 55
 Sink term, 228
 Sintering, 190, 192, 195
 viscous, 195–198
 Slip model, 135, 136
 Snamprogetti facilities, 25–61,
 65–124
 Sol-gel process, 192
 Solid core model, 217–221
 Solvents, semidilute, 13–19
 Sorption–desorption processes, 277
 Spencer–Gilmore equation,
 154, 185
 Spherulites, 150, 184
 Spurt
 distortions, 127
 instability and, 127
 in melts, 125–145
 relaxation and, 143
 viscosity and, 125, 132
 zone, 134
 Squeeze casting, 282
 Stability conditions, 79
 Stefan problem, 221, 297, 315
 Sticky points, 3, 21, 23
 Stokes creeping flow, 195–198
 Stokes equations, 203, 300
 boundary conditions, 207–208

Stokes formula, 17, 28, 32
 Stokes paradox, 29
 Stokes regime, 9
 Stress equilibrium equation,
 284
 Stress-free condition, 296
 Stress-strain relation, 295
 Strong wave period, 87
 Structure factor, 65
 Swelling, 223
 Switch curve, 135

T

Telechelic chains, 22
 Tensor forms, 73
 Thermal field analysis, 164–166
 Thixotropic properties, 65, 78
 Three-dimensional codes, 84
 Tobin's law, 156
 Traction problems, 300
 Transient phases, 66
 Transonic flows, 85
 Trapezoidal algorithm, 210
 Tube model, 16
 Turbulence, 26, 84

U

Undercooling, 315
 Uniqueness conditions, 331

V

Valves, 94–95, 103–104
 Van der Waals forces, 7
 Venting, adiabatic, 105–108
 Viscoelastic properties, 300
 Viscosity
 effective, 30
 intrinsic, 5–10
 nonlinear behavior, 5
 parameters of, 12
 polymers and, 1–24
 scaling laws, 4
 sintering and, 195–198
 spurt layer and, 142
 zeroshear, 3

Vogel–Fulcher–Tamman relation,
204
Void ratio, 297
Voigt–Kelvin equation, 302
Volterra equations, 290
Volumetric velocity, 325–326

W

Wall effects, 73, 78, 97, 125
Warping, 186

Wetting fronts, 313, 316
White–Metzner equation, 301

Y

Yield stress, 29, 66, 73–74

Z

Zeroshear viscosity, 3
Ziegler–Natta process, 215–238
