

Index

A

Accelerometer, 133, 137
Aggregate Message Authentication Code (AMAC) technology, 5
Amount of new cases per day (AONCPD), 124, 127
Application Service Provider (ASP), 50
Arduino, 136–137
Austro-Hungary, 158, 159, 161
Automatic annotation, 170–171

B

Biodegradable waste
 biomass combustion systems
 centralized systems, 66
 decentralized systems, 65
 chemical properties, 69–70
 energetic properties, 69
 processing
 energy biomass, 64
 gas-based bio-waste, 63
 liquid bio-wastes, 63–64
 solid biodegradable wastes, 64
 testing methods
 ash and moisture content, 67
 calorific values, 67–68
 humidity and calorific values, 70, 71
 nitrogen, carbon, and hydrogen module, 68
 sulfur module, 69
 treatment
 agricultural production, 62

 forest management, 62–63
 municipal waste, 62

Blockchain, 26
Bootstrap profile, 45

C

Cellular technologies, 40
Closed cycle of local renewable resources, 61
Computer, for dispatcher, 149
Confusion matrix of the multinomial classifier, 181
Counting every person
 directly by means of image processing, 77–78
 directly by means of non-image processing, 78–79
 indirectly by counting features, traits of humans, 79
COVID-19
 transport logistics, digitalization in, 151
 transport system, 121–123, 125, 128
Czech countries
 first industrial revolution, 157–158
 second industrial revolution, 158–159, 161
 third industrial revolution, 159–160

D

D2D authentication technique, 6
Data practices, 164, 165, 167, 168
Data privacy, 153
Data processing, 172–173

- Data Science method, 26
 - Data visualization, Drive Health, 140–141
 - Device to device (D2D) communication, 3

- P**
- Passive infrared sensor (PIR sensor), 79–80
 - People counting in public transport
 - comparison with other methods, 89–91
 - counting every person
 - directly by means of image processing, 77–78
 - directly by means of non-image processing, 78–79
 - indirectly by counting features, traits of humans, 79

- People counting in public transport (*cont.*)
 estimating number of people in a group,
 76–77
 four-people scenarios, 89
 Gaussian filter, 88
 IR-UWB, 80
 one-person walking scenarios, 88–89
 overview, 76
 passive infrared sensor (PIR sensor), 79–80
 proposed solution
 counting node design, 81–82
 data gathering, 84–86
 determining direction, 83
 human detection, 82–83
 placing of counting node, 83–84
 pre-processing, 82–83, 86–88
 ultrasonic sensor, 80
 Personal Identifiable Information (PII), 164
 Petri networks, 26
 Potholes, 133–134, 142
 Privacy policies analysis (PPA)
 annotation, 166–167
 difficulties in readability, 166
 IoT (*see* IoT privacy policy analysis)
 text categorization analysis, 166–167
 Progressive Snapshot, 141
 Public key cryptography (PKC), 5
 Public transport multimodality, 109
 Python, 137
- Q**
 Quantum Cryptography, 4
- R**
 R-square value, 31
 Radio access network (RAN), 3
 Raspberry Pi, 136
 Real-time data reporting, Drive Health, 141
 Regression model, 34
 Rivest–Shamir–Adleman (RSA), 8, 12–13
