(h, k) -dichotomies, 46, 108
 L -diagonal form, 11, 179
 L^p -perturbations with $p > 1$, 143, 381
 T -operator, 14
 l^1 perturbations for scalar equations, 311
 l^p -perturbations for $p > 1$, 188

A

alternative form of Levinson's dichotomy conditions, 18
approximate equations, 120, 121, 180, 181
asymptotic comparison results, 255
asymptotic diagonalization, 5, 12, 36
asymptotic equivalence, 54, 106
asymptotic factorization, 5, 119, 266, 358
asymptotic integration, 1, 5
asymptotic solution, 5
averaged growth conditions, 334

B

block-triangular perturbations, 224
bounded variation coefficients, 352

C

column-wise exponential dichotomy, 87
conditionally convergent perturbations, 195
conditionally integrable perturbations, 152, 159, 383
conditioning transformation, 120, 121, 179, 180

Coppel's theorem, 14, 71, 373
coupled dichotomy-growth conditions, 49

D

dichotomy condition, 1, 13, 16, 18, 20, 23, 70, 73, 75, 81
discrete Hartman–Wintner theorem, 93, 189
discrete ordinary dichotomy, 70
discrete version of Coppel's theorem, 71
discrete version of Levinson's fundamental theorem, 72
discrete version of Wintner theorem, 197

E

error term estimate, 41, 44, 102, 248, 311
exponential dichotomy, 28

F

fundamental matrix, 6

G

growth condition, 12

H

H-ordinary dichotomy, 111
harmonic linear oscillator, 270
Hartman–Wintner theorem, 35, 143
higher derivatives, 140

J

Jordan systems, 209, 233

K

Koornik theorem, 76

L

Levinson's dichotomy conditions, 16
 Levinson's fundamental theorem, 2, 16, 72
 Levinson–Eastham theorem, 136
 linear asymptotic equilibrium, 155
 Liouville–Green approximations, 244, 282, 309
 Liouville–Green transformation, 243

M

meromorphic differential equations, 4
 method of averaging, 172

N

non-resonance, 165, 275
 noninvertible systems, 110
 nonoscillatory second-order equations, 257

O

Olver-type error estimate, 248, 311
 ordinary dichotomy, 13, 70, 373

P

perturbations of constant systems, 38, 96
 perturbations of harmonic linear oscillator, 270
 perturbed constant scalar equations, 239, 297
 perturbed Jordan difference systems, 233
 perturbed Jordan differential systems, 209

Poincaré, 96, 239, 297

preliminary transformation, 5, 119, 120, 174, 179, 204

R

reduction to eigenvalues, 123, 182, 379
 regular growth coefficients, 325
 regular variation coefficients, 342
 resonance, 154
 Riccati transformation, 247
 row-wise results, 59, 62

S

scalar linear differential equations, 237
 second-order difference equations, 311, 325, 334, 342, 352, 365
 second-order linear differential equations, 242
 second-order matrix equations, 285
 sharpness of dichotomy/growth conditions, 20, 81
 shearing transformations, 175
 state transition matrix, 88

T

third-order equations, 282
 time scales, 369
 time scales version of Coppel's theorem, 373
 time scales version of Levinson's fundamental theorem, 374
 transformation equation, 121
 triangular perturbations, 148, 193

U

uniform asymptotic integration, 66

W

weak dichotomies, 23, 83, 222, 378
 Wintner theorem, 154, 197

Edited by J.-M. Morel, B. Teissier; P.K. Maini

Editorial Policy (for the publication of monographs)

1. Lecture Notes aim to report new developments in all areas of mathematics and their applications - quickly, informally and at a high level. Mathematical texts analysing new developments in modelling and numerical simulation are welcome.
Monograph manuscripts should be reasonably self-contained and rounded off. Thus they may, and often will, present not only results of the author but also related work by other people. They may be based on specialised lecture courses. Furthermore, the manuscripts should provide sufficient motivation, examples and applications. This clearly distinguishes Lecture Notes from journal articles or technical reports which normally are very concise. Articles intended for a journal but too long to be accepted by most journals, usually do not have this "lecture notes" character. For similar reasons it is unusual for doctoral theses to be accepted for the Lecture Notes series, though habilitation theses may be appropriate.
2. Manuscripts should be submitted either online at www.editorialmanager.com/lnm to Springer's mathematics editorial in Heidelberg, or to one of the series editors. In general, manuscripts will be sent out to 2 external referees for evaluation. If a decision cannot yet be reached on the basis of the first 2 reports, further referees may be contacted: The author will be informed of this. A final decision to publish can be made only on the basis of the complete manuscript, however a refereeing process leading to a preliminary decision can be based on a pre-final or incomplete manuscript. The strict minimum amount of material that will be considered should include a detailed outline describing the planned contents of each chapter, a bibliography and several sample chapters.
Authors should be aware that incomplete or insufficiently close to final manuscripts almost always result in longer refereeing times and nevertheless unclear referees' recommendations, making further refereeing of a final draft necessary.
Authors should also be aware that parallel submission of their manuscript to another publisher while under consideration for LNM will in general lead to immediate rejection.
3. Manuscripts should in general be submitted in English. Final manuscripts should contain at least 100 pages of mathematical text and should always include
 - a table of contents;
 - an informative introduction, with adequate motivation and perhaps some historical remarks: it should be accessible to a reader not intimately familiar with the topic treated;
 - a subject index: as a rule this is genuinely helpful for the reader.

For evaluation purposes, manuscripts may be submitted in print or electronic form (print form is still preferred by most referees), in the latter case preferably as pdf- or zipped ps-files. Lecture Notes volumes are, as a rule, printed digitally from the authors' files. To ensure best results, authors are asked to use the LaTeX2e style files available from Springer's web-server at:

[ftp://ftp.springer.de/pub/tex/latex/svmonot1/](http://ftp.springer.de/pub/tex/latex/svmonot1/) (for monographs) and

[ftp://ftp.springer.de/pub/tex/latex/svmult1/](http://ftp.springer.de/pub/tex/latex/svmult1/) (for summer schools/tutorials).

Additional technical instructions, if necessary, are available on request from lnm@springer.com.

4. Careful preparation of the manuscripts will help keep production time short besides ensuring satisfactory appearance of the finished book in print and online. After acceptance of the manuscript authors will be asked to prepare the final LaTeX source files and also the corresponding dvi-, pdf- or zipped ps-file. The LaTeX source files are essential for producing the full-text online version of the book (see <http://www.springerlink.com/openurl.asp?genre=journal&issn=0075-8434> for the existing online volumes of LNM). The actual production of a Lecture Notes volume takes approximately 12 weeks.
5. Authors receive a total of 50 free copies of their volume, but no royalties. They are entitled to a discount of 33.3 % on the price of Springer books purchased for their personal use, if ordering directly from Springer.
6. Commitment to publish is made by letter of intent rather than by signing a formal contract. Springer-Verlag secures the copyright for each volume. Authors are free to reuse material contained in their LNM volumes in later publications: a brief written (or e-mail) request for formal permission is sufficient.
