- $O(n)$  model, 7
  - phase transition in, 21
- (FA-jf) facilitated models, 315
- 0-1 Kinetically constrained spin models, 314
- 120-degree model, 72
- autonomous evolution, 275, 281
- bisection-constrained approach, 328
- Boltzmann entropy, 275, 281
  - quantum, 289
- bootstrap map, 314
- boundary condition, 6
  - free, 13
  - minus, 12
  - periodic, 13
  - plus, 12
- capacity, 187, 236
  - bounds on, 198
- capacity matrix, 213
- chessboard estimate, 50
  - bounds using, 62
- concentrating projections, 289
- conformations, 178
- conservative dynamics, 228
- constraint, 311
- contact fraction, 136
- critical droplet, 229
- crossover time, 229
- Curie-Weiss model, 111, 198
  - in transverse field, 112, 115
    - critical curve for, 121
    - large deviations, 119
    - near criticality, 126
- current, 259, 266
  - fluctuations, 267
- detailed balance, 251, 259, 265
  - local, 260
- Dirichlet form, 10, 26, 187, 236, 312
- Dirichlet principle, 187
- Dirichlet problem, 186, 323
- disorder relevance, 142
- disordered pinning model, 134
- DLR condition, 11
- DNA denaturation, 140
- East model, 316
- eigenfunction, 207
- eigenvalue
  - principal, 208, 210
  - small, 210
- eigenvalues, 207
- entropy production, 254, 279
- equilibrium measure, 187
- equilibrium potential, 186
- escape probability, 188
- Focke-Planck equation, 183
- free energy, 14
  - mean-field, 32

Gallavotti-Cohen symmetry, 267

Gaussian

double-well model, 59

free field, 10

Gaussian domination, 22, 47

generator, 183

Gibbs measure, 11, 200

in infinite volume, 11

Girsanov formula, 263

Glauber dynamics, 179, 200, 226

gradient field, 66

Green's function, 20, 191

H-theorem, 276, 282

quantum, 291

Hamiltonian, 6

Harris criterion, 145

heat, 262

Heisenberg model, 7

quantum, 77

hitting time, 185

mean, 192

homogeneous pinning model, 142

induced measure, 201

infinite gas reservoir, 227

influence classes, 311

infrared bound, 21

proof of, 48

interacting models, 324

interpolation technique, 147

invariant measure, 183

inverse temperature, 11

Ising model, 7, 226

in transverse field, 103

classical, 88

phase transition in, 12

Jarzynski equality, 264

Kawasaki dynamics, 226

kinetically constrained spin models  
(KCSM), 307

large deviations, 17, 180

quantum, 297

lattice gas, 226, 252

Lie-Trotter Formula, 92

liquid-crystal model, 9

localization-delocalization transition,  
136

macroscopic irreversibility, 279

macrostate, 279, 280

quantum, 289

magnetization, 30

marginal disorder, 147

Markov process, 182

mean hitting time, 192, 196

mean-field theory, 29

Mermin-Wagner theorem, 25

metastability, 223

definition of, 193

metastable points, 193

metastable regimes, 228

Metropolis dynamics, 227

non-conservative dynamics, 228

North-East model, 316

one-dimensional chain, 188

orbital compass model, 70

partition function, 11

path-space measure, 257, 263

pathwise approach to metastability,  
224

Pauli matrices, 89, 103, 299

persistence function, 317

phase coexistence, 12

phase transition, 12, 178

potential theory, 186

potential-theoretic approach to  
metastability, 226

Potts model, 8

mean-field theory of, 32

phase transition in, 35

protocritical droplet, 234

quantum random graphs

critical curve for, 117

quasi-equilibrium, 178, 224

- quenched versus annealed free energy, 138
- random-cluster model, 8, 36
- reflection positivity, 43
  - condition for, 45
- renewal bound, 192
- renewal equation, 192
- renewal process, 132
- reverse process, 184
- reversible Markov chain, 184
- reversible measure, 184
- semi-group, 183
- smoothing effect of disorder, 162
- spectral gap, 317
- spectral theory, 206
- spin, 6
- spin configuration, 6
- spin model, 5
- spin wave, 70
  - condensation, 22
- Spiral model, 315
- steady state, 261
- stochastic process, 182
- stochastic representation
  - classical Fortuin-Kasteleyn (FK), 96
  - classical random current (RC), 99
    - decay of correlations, 101
    - switching lemma for, 100
  - path integral approach, 91, 93
  - quantum FK, 104
    - reduced density matrix, 107
  - quantum RC, 107
    - reduced density matrix, 111
- stopping time, 185
- symmetry breaking, 17
- time-reversal, 251, 258, 264
- transition kernel, 10, 182
- transition matrix, 183
- ultrametricity, 194
- universality in metastable behavior, 224
- valley, 195
- Wentzell-Freidlin theory, 180
- wetting model, 140
- work, 262
- Wulff shape, 242
- XY-model, 77

**Editorial Policy** (for Multi-Author Publications: Summer Schools/Intensive Courses)

1. Lecture Notes aim to report new developments in all areas of mathematics and their applications - quickly, informally and at a high level. Mathematical texts analysing new developments in modelling and numerical simulation are welcome. Manuscripts should be reasonably self-contained and rounded off. Thus they may, and often will, present not only results of the author but also related work by other people. They should provide sufficient motivation, examples and applications. There should also be an introduction making the text comprehensible to a wider audience. This clearly distinguishes Lecture Notes from journal articles or technical reports which normally are very concise. Articles intended for a journal but too long to be accepted by most journals, usually do not have this "lecture notes" character.
2. In general SUMMER SCHOOLS and other similar INTENSIVE COURSES are held to present mathematical topics that are close to the frontiers of recent research to an audience at the beginning or intermediate graduate level, who may want to continue with this area of work, for a thesis or later. This makes demands on the didactic aspects of the presentation. Because the subjects of such schools are advanced, there often exists no textbook, and so ideally, the publication resulting from such a school could be a first approximation to such a textbook. Usually several authors are involved in the writing, so it is not always simple to obtain a unified approach to the presentation.

For prospective publication in LNM, the resulting manuscript should not be just a collection of course notes, each of which has been developed by an individual author with little or no co-ordination with the others, and with little or no common concept. The subject matter should dictate the structure of the book, and the authorship of each part or chapter should take secondary importance. Of course the choice of authors is crucial to the quality of the material at the school and in the book, and the intention here is not to belittle their impact, but simply to say that the book should be planned to be written by these authors jointly, and not just assembled as a result of what these authors happen to submit.

This represents considerable preparatory work (as it is imperative to ensure that the authors know these criteria before they invest work on a manuscript), and also considerable editing work afterwards, to get the book into final shape. Still it is the form that holds the most promise of a successful book that will be used by its intended audience, rather than yet another volume of proceedings for the library shelf.

3. Manuscripts should be submitted either online at [www.editorialmanager.com/lnm/](http://www.editorialmanager.com/lnm/) to Springer's mathematics editorial, or to one of the series editors. Volume editors are expected to arrange for the refereeing, to the usual scientific standards, of the individual contributions. If the resulting reports can be forwarded to us (series editors or Springer) this is very helpful. If no reports are forwarded or if other questions remain unclear in respect of homogeneity etc, the series editors may wish to consult external referees for an overall evaluation of the volume. A final decision to publish can be made only on the basis of the complete manuscript; however a preliminary decision can be based on a pre-final or incomplete manuscript. The strict minimum amount of material that will be considered should include a detailed outline describing the planned contents of each chapter.

Volume editors and authors should be aware that incomplete or insufficiently close to final manuscripts almost always result in longer evaluation times. They should also be aware that parallel submission of their manuscript to another publisher while under consideration for LNM will in general lead to immediate rejection.

4. Manuscripts should in general be submitted in English. Final manuscripts should contain at least 100 pages of mathematical text and should always include
  - a general table of contents;
  - an informative introduction, with adequate motivation and perhaps some historical remarks: it should be accessible to a reader not intimately familiar with the topic treated;
  - a global subject index: as a rule this is genuinely helpful for the reader.

Lecture Notes volumes are, as a rule, printed digitally from the authors' files. We strongly recommend that all contributions in a volume be written in the same LaTeX version, preferably LaTeX2e. To ensure best results, authors are asked to use the LaTeX2e style files available from Springer's web-server at

<ftp://ftp.springer.de/pub/tex/latex/svmonot1/> (for monographs) and  
<ftp://ftp.springer.de/pub/tex/latex/svmultt1/> (for summer schools/tutorials).

Additional technical instructions are available on request from: [lnm@springer.com](mailto:lnm@springer.com).

5. Careful preparation of the manuscripts will help keep production time short besides ensuring satisfactory appearance of the finished book in print and online. After acceptance of the manuscript authors will be asked to prepare the final LaTeX source files and also the corresponding dvi-, pdf- or zipped ps-file. The LaTeX source files are essential for producing the full-text online version of the book. For the existing online volumes of LNM see: <http://www.springerlink.com/openurl.asp?genre=journal&issn=0075-8434>.

The actual production of a Lecture Notes volume takes approximately 12 weeks.

6. Volume editors receive a total of 50 free copies of their volume to be shared with the authors, but no royalties. They and the authors are entitled to a discount of 33.3% on the price of Springer books purchased for their personal use, if ordering directly from Springer.
7. Commitment to publish is made by letter of intent rather than by signing a formal contract. Springer-Verlag secures the copyright for each volume. Authors are free to reuse material contained in their LNM volumes in later publications: a brief written (or e-mail) request for formal permission is sufficient.

#### Addresses:

Professor J.-M. Morel, CMLA,
