<i>List of Figures</i>	vii
<i>List of Tables</i>	ix
<i>Notes on the Contributors</i>	xii
Introductory Comments, Definitions, and Research on Indexes of Monetary Services <i>Michael T. Belongia</i>	1
Part I New Results in Theory and Practice	
1 Beyond the Risk-neutral Utility Function <i>William A. Barnett and Yi Liu</i>	11
2 Neural Networks with Divisia Money: Better Forecasts of Future Inflation? <i>Robert E. Dorsey</i>	28
Part II Evidence from European Economies and the Planned EMU Area	
3 Weighted Monetary Aggregates for the UK <i>Leigh Drake, K. Alec Chrystal and Jane M. Binner</i>	47
4 Weighted Monetary Aggregates for Germany <i>Heinz Herrmann, Hans-Eggert Reimers and Karl-Heinz Toedter</i>	79
5 Simple-sum versus Divisia Money in Switzerland: Some Empirical Results <i>Robert Fluri and Erich Spoerndli</i>	102
6 Weighted Dutch and German Monetary Aggregates: How Do They Perform as Monetary Indicators for the Netherlands? <i>Norbert G. J. Janssen and Clemens J. M. Kool</i>	120
7 Divisia Aggregates and the Demand for Money in Core EMU <i>Martin M. G. Fase</i>	138
Part III Evidence from the Pacific Basin	
8 Broad and Narrow Divisia Monetary Aggregates for Japan <i>Kazuhiko Ishida and Koji Nakamura</i>	173

9	The Signals from Divisia Money in a Rapidly Growing Economy <i>Jeong Ho Hahm and Jun Tae Kim</i>	200
10	Divisia Monetary Aggregates for Taiwan <i>Yen Chrystal Shih</i>	227
11	Weighted Monetary Aggregates: Empirical Evidence for Australia <i>G. C. Lim and Vance L. Martin</i>	249
	Part IV Evidence from North America	263
12	The Canadian Experience with Weighted Monetary Aggregates <i>David Longworth and Joseph Atta-Mensah</i>	265
13	Consequences of Money Stock Mismeasurement: Evidence from Three Countries <i>Michael T. Belongia</i>	292
	<i>Index</i>	313

List of Figures

2.1	Artificial neural network used for model 1	35
2.2	M1 AR model forecast (92Q1 to 94Q1 out-of sample)	39
2.3	M2 AR model forecast (92Q1 to 94Q1 out-of sample)	40
2.4	Divisia M1 AR model forecast (92Q1 to 93Q4 out-of sample)	40
2.5	Divisia M2 AR model forecast (92Q1 to 93Q4 out-of sample)	41
3.1	Divisia M4 and Bank of England Divisia M4	51
3.2	Divisia M4 and simple-sum M4 aggregates	52
3.3	Annual growth rates of Divisia M4 and simple-sum M4 (quarterly data)	53
3.4	Velocity of circulation indices for Divisia and simple-sum M4	53
3.5	Sixteen-quarter ECM forecasts of Divisia M4 and actual Divisia M4	62
3.6	Sixteen-quarter ECM forecasts of simple-sum M4 and actual simple-sum M4	62
3.7	CUSUMSQ test statistic for Divisia M4 ECM	63
3.8	CUSUMSQ test statistic for simple-sum M4 ECM	63
3.9	Annual growth rates of Divisia and simple-sum M4 (lagged 2 years) and the annual rate of price inflation	68
3.10	Divisia M4 growth (lagged 2 years), base rate and inflation	69
3.11	LRGDP responses to money shocks	74
3.12	LGDPDEF responses to money shocks	74
3.13	TBR responses to money shocks	75
4.1	Shares of the components of M3	86
4.2	Interest rates	88
4.3	Share values around mean	89
4.4	Monetary aggregates	90
5.1	Divisia M2 versus simple-sum M2	104
5.2	Simple-sum M1 versus Divisia M2 (old)	105
7.1	Inflation in Germany <i>plus</i> Benelux, using DM and US\$ exchange rates	148
8.1	Simple-sum and Divisia M1 indices	176
8.2	Growth rate of simple-sum and Divisia M1 (year-to-year)	176
8.3	Velocity of simple-sum and Divisia M1 (trend: I Q/69–I Q/94)	178
8.4	Simple-sum and Divisia M2+CDs Indices	179
8.5	Growth rate of simple-sum and Divisia M2+CDs (year-to-year)	179
8.6	Velocity of simple-sum and Divisia M2+CDs (trend: I Q/69–I Q/94)	180
8.7	Velocity gap and holding cost of Divisia M2+CDs	181
8.8	Simple-sum and Divisia L indices	182

8.9	Growth rate of simple-sum and Divisia L (year-to-year)	183
8.10	Velocity of simple-sum and Divisia L (trend: IQ80–IVQ93)	184
8.11	Simple-sum and Divisia A1 indices	185
8.12	Velocity of simple-sum and Divisia A1 (trend: IQ80–IVQ93)	185
8.13	Simple-sum and Divisia A2 indices	186
8.14	Velocity of simple-sum and Divisia A2 (trend: IQ80–IVQ93)	187
8.15	Results of stepwise Chow test (F-value) simple-sum M1	189
8.16	Results of stepwise Chow test (F-value) Divisia M1	189
8.17	Results of stepwise Chow Test (F-value) simple-sum M2+CDs	192
8.18	Results of stepwise Chow Test (F-value) Divisia M2+CDs	192
8.19	Extrapolation test for money demand function of simple-sum M2+CDs	193
8.20	Extrapolation test for money demand function of Divisia M2+CDs	194
8.21	Extrapolation test for money demand function of simple-sum M2+CDs with wealth variable	195
9.1	Levels and growth rates of SM2A and DM2A	213
9.2	Levels and growth rates of SM2 and DM2	213
9.3	Levels and growth rates of SM2B and DM2B	214
9.4	Levels and growth rates of SM3 and DM3	214
9.5	Velocities of SM2A and DM2A	215
9.6	Velocities of SM2 and DM2	215
9.7	Velocities of SM2B and DM2B	216
9.8	Velocities of SM3 and DM3	216
10.1	The representative rates of return on monetary assets	233
10.2	Movements in money growth	235
10.3	Velocities of monetary aggregates	237
10.4	Recursive estimated coefficients of real GNP	243
11.1	Subordinate monetary aggregates	251
11.2	Monetary aggregates: unweighted and weighted	252
11.3	Velocity: unweighted and weighted	253
11.4	A test for bimodality	257
11.5	Density snapshots of $\log(D_6/P)$: 1984:7–1993:12	258
12.1	The four-quarter growth rates of the monetary aggregates	273
12.2	Rolling Chow tests for simple-sum monetary aggregates	285
12.3	Rolling Chow tests for Fisher Ideal monetary aggregates	286
13.1	Growth of simple-sum and Divisia CE, and Divisia M2 plus (USA: 1980Q1–1992Q4)	302
13.2	Growth of simple-sum and Divisia M3, and Divisia WS3 (Germany: 1980Q1–1990Q1)	303
13.3	Simple-sum and Divisia M2+CDs, and Divisia WS2 (Japan: 1980Q1–1991Q2)	304

List of Tables

2.1	Forecast errors, 1970–1982	32
2.2	Mean absolute CPI forecast errors, 1986Q1–1991Q3	32
2.3	Root mean squared errors of in-sample forecasts	37
2.4	Out-of-sample forecast errors	38
3.1	Order of integration tests	55
3.2	Summary of Johansen cointegration results for Divisia M4 normalised coefficients	56
3.3	Johansen cointegration results for simple-sum M4 normalised coefficients	57
3.4	Johansen cointegration results for Divisia M4 incorporating both real GDP and real TFE	59
3.5	St Louis equation: non-nested tests	65
3.6	Cointegration results for the ‘causality vector’ based on the maximal eigenvalue of the stochastic matrix	67
3.7	Granger causality tests	69
3.8	Vector autoregressive models: Simple-sum M4	71
3.9	Vector autoregressive models: Divisia M4	72
4.1	Aggregation and weighting schemes of monetary assets	83
4.2	Expenditure on monetary services, 1989 (DM bn)	84
4.3	Weighted monetary aggregates	85
4.4	Long-run money demand equations ($m - p$)	92
4.5	Dynamic money demand equations ($\Delta_4(m - p)$)	92
4.6	Dynamic price equations in four-period differences (Δ_4p)	95
4.7	Forecast errors of the inflation rate (1987:1 to 1993:4)	97
5.1	Test results of equation $\Delta p_t = c + \alpha \cdot \Delta p_{t-1} + \beta_{11} \cdot \Delta m_{t-11} + \varepsilon_t$	108
5.2	Test results of equation $\Delta y_t = c + \sum_{i=1}^h \alpha_i \cdot \Delta y_{t-i} + \sum_{i=1}^j \beta_i \cdot \Delta p_{t-i} + \sum_{i=1}^k \gamma_i \cdot \Delta r_{b,t-i} + \sum_{i=1}^l \delta_i \cdot \Delta m_{t-i} + \varepsilon_t$	109
5.3	VECM with lags 1 to 4 plus lag 11 for Δs of m , p , y , r_b plus r_{ta} for M1a and error correction term (cointegrating equation), including a constant term but no deterministic trend	111
5.4	Keynesian model	113
5.5	ADF-cointegration tests for velocity and bond yield (1977:2–1994:1)	114
6.1	Summary statistics for quarterly growth rates of monetary aggregates (1979:4–1993:4)	125
6.2	Trace and λ_{max} statistics (1979:4–1993:4)	126
6.3	Exclusion tests in VAR causality regressions (1979:4–1993:4)	128

6.4	Trace and λ_{max} statistics with German monetary aggregates (1979:4–1993:4)	131
6.5	Exclusion tests in VAR causality regressions between German monetary aggregates and the Dutch real economy (1979:4–1993:4)	132
6.6	Forecast errors of Dutch real income growth and inflation in percentages (initial estimation sample: 1979:4–1985:4)	133
7.1	Various methods of constructing Divisia monetary measures for (sub) EMU monetary aggregates	141
7.2	Summary statistics for core EMU countries Germany <i>plus</i> Benelux; all variables in growth rates	142
7.3	Equilibrium elasticities for M3	147
7.4	Long-run properties of money demand	150
7.5	Standard error of residuals ($\times 10^3$)	152
7.B.1	Summary statistics for core EMU: Germany, France plus Benelux	164
7.C.1	Results of specification analysis, long-run relationship	165
7.C.2	LB tests on residual autocorrelation	167
7.C.3	Results of cointegration analysis	168
8.1	Basic statistics	177
8.2	Estimation results of money demand functions	190
8.3	Results of GARP tests	197
9.1	A taxonomy of monetary assets and interest rate series	202
9.2	Parametric restrictions for approximate weak separability tests	211
9.3	Test statistics and critical values	212
9.4	Stability tests on monetary velocities (1980.1–1993.4)	218
9.5	Cointegration tests on relationship between price level and monetary quantity index (1980.1–1993.4)	219
9.6	Error correction models (dependent variable: inflation rate)	220
9.7	Summary statistics for error correction forecasts of inflation	221
10.1	A taxonomy of monetary assets and variable names of component asset and interest rate series	232
10.2	Correlations of the growth rates of monetary aggregates	234
10.3	Estimated trends in the velocities of GNP and standard deviations from the trends	236
10.4	Results of Dickey–Fuller tests for unit roots	239
10.5	Results of the Engle–Granger tests for cointegration	241
10.6	Results of the estimation of money demand equations	242
10.7	R^2 and J -tests for linkages between inflation and money growth	244
10.8	Controllability of monetary aggregates	246
11.1	Descriptive statistics	254
11.2	Cointegrating variables: $\log(M/P)$; $\log(Y/P)$; R	256

11.3	BM decomposition of the series: $A_0/P, A_1/P, \dots, A_5/P, Y/P$ (squared) coherence, 43-month cycle	260
11.4	BM decomposition of $[A_0, A_1, \dots, A_5, Y]$	260
12.1	Mean and standard deviation of the four-quarter growth rates of the monetary aggregates	272
12.2	Mean and standard deviation of the four-quarter growth rates of the goal variables	272
12.3	The three best indicator models in estimation, based on the minimum Akaike Information Criterion (AIC)	274
12.4	Davidson and MacKinnon (1981) J-tests	275
12.5	Best aggregates in estimation: a comparison of various studies	276
12.6	Lowest RMSE for one-quarter-ahead forecast (annualised growth rates)	277
12.7	Best aggregates in prediction: a comparison of various studies (one-quarter-ahead prediction)	277
12.8	The three best aggregates in the prediction of the annualised average growth rates of the goal variables (based on lowest RMSE)	278
12.9	Encompassing J-test results for the dynamic out-of-sample forecasts (annualised average growth rates) (Forecast horizon: 1982Q1–1989Q3)	280
12.10	Estimated cointegrating vectors that fit the characteristics of a money demand function	282
12.11	Estimated coefficients of the ECM term in the dynamic money-demand functions	284
13.1	Asset categories, abbreviations and size characteristics	296
13.2	Results of tests for weak separability	300
13.3	Correlation coefficients between changes in money growth rates	305
13.4	Means and standard deviations of money growth rates	307
13.5	Unit root tests on differences between the growth rates of alternative money stock measures	308

Notes on the Contributors

Joseph Atta-Mensah is a senior analyst at the Bank of Canada. He gained his PhD in Financial Economics from Simon Fraser University, Vancouver, Canada. His research interests include: monetary policy issues, information extraction from financial assets, valuation of financial instruments and economic forecasting models.

William A. Barnett is the originator of Divisia monetary aggregates. He derived the formula for the monetary services' user cost, which he used in establishing the relevancy of aggregation and index number theory to monetary economics. He is editor of the Cambridge University Press journal, *Macroeconomic Dynamics* and the Cambridge University Press monograph series, *International Symposia in Economic Theory and Econometrics*, and is a fellow of the American Statistical Association.

Michael T. Belongia is Hearin-Hess Professor of Economics and Finance at the University of Mississippi. Prior to this appointment he served as economist and economic advisor at the Federal Reserve Bank of St Louis. He has also served as consultant or visiting scholar at several central banks in Europe.

Jane M. Binner is a Senior Lecturer in Finance at the Nottingham Business School. Previous positions include senior lecturer in Statistics at the University of Derby and Business Analyst with the Experian Group. Jane gained her PhD in Multivariate Time Series Analysis from the University of Leeds in 1990. Her research comprises a diverse range of areas including artificial intelligence applications, game theory modelling in the health and retail sectors, application of advanced time series analysis techniques in the area of contract law, and the evaluation of the econometric performance of Divisia monetary aggregates across Europe as European Monetary Union gets under way.

K. Alec Chrystal is a Research Adviser to the Bank of England within the Monetary Analysis Division. His previous appointment was as the National Westminster Bank Professor of Monetary Economics within the Department of Banking and Finance at the City University Business School, London. He is author of *Controversies in Macroeconomics* (Prentice-Hall) and co-author (with R.G. Lipsey) of *An Introduction to Positive Economics* and *Economics for Business and Management* (both Open University Press).

Robert E. Dorsey is Associate Professor of Economics and Finance at the University of Mississippi. His primary research interests are econometrics of non-linear systems, artificial intelligence and experimental economics. Prior to taking up a post at the University of Mississippi, Robert was head of the Department of Risk Management at the University of Arizona.

Leigh Drake is a Professor in the Economics Department at Loughborough University and Deputy Director of the Loughborough University Banking Centre. He has published widely in the area of Monetary Economics and Banking. Recent journal publications include: *Economic Journal* (1996); *Oxford Economic Papers* (1997); and the *Review of Economics and Statistics* (1997). Leigh Drake is author of *The Building Society Industry in Transition* (Macmillan, 1989).

Martin M.G. Fase is the Deputy Director of the Nederlandsche Bank and manager of the Bank's Econometric Research and Special Studies Department. He is Professor of Monetary Economics at the University of Amsterdam. He has published extensively on statistics, monetary economics and the history of economic thought, and is a member of the Royal Dutch Academy of Arts and Sciences.

Robert Fluri is Deputy Head of the Statistics Section of the Swiss National Bank in Zurich. He has a Masters degree in Economics from the University of Bern.

Jeong Ho Hahm is Deputy General Manager of the Cheongju branch of the Bank of Korea. Previous positions include Chief Economist at the Institute for Monetary and Economic Research at the Bank of Korea, and visiting research fellow at the Kiel Institute of World Economics in Germany. Jeong gained his PhD in Economics at the University of Texas, USA.

Heinz Herrmann is a Senior Economist in the Research Department at the Deutsche Bundesbank, Frankfurt am Main. He is author of the book, *Problems of Monetary Policy Considering Reactions of Commercial Banks* (1977).

Kazuhiko Ishida is Chief Manager and Senior Economist in the Institute for Monetary and Economic Studies, Bank of Japan. His previous positions include Senior Economist at the Research and Statistics Department, Bank of Japan and Economist in the Economic and Statistic Department at OECD, Paris.

Norbert G.J. Janssen has been an analyst in the Bank of England's Monetary Assessment and Strategy Division since 1995. Prior to this, he was a lecturer at Maastricht University, the Netherlands, where he wrote his PhD thesis, 'The

Definition and Policy Relevance of Monetary Aggregates in the Netherlands'. Norbert's work has been published in the *Bank of England's Quarterly Bulletins*, the *Economic Journal*, and the *Swiss Journal of Economics and Statistics*.

Jun Tae Kim joined the Bank of Korea in 1991 as a junior economist in the Institute for Monetary & Economic Research. Currently, Jun Tae Kim is working as an Economist at the Chongju Branch of the Bank of Korea.

Clemens J.M. Kool is the Professor of Money, Banking and European Financial Markets at the University of Maastricht in the Netherlands. Clemens obtained his PhD from Erasmus University, Rotterdam, the Netherlands in 1989. Previous positions held include senior adviser at the Netherlands central bank and visiting professor at both the Federal Reserve Bank of St Louis and the School of Business at Indiana University. Clemens has published widely in journals such as *European Economic Review*, *Journal of Business and Statistics* and the *Journal of International Money and Finance*.

G.C. Lim is an Associate Professor of Economics in the Economics Department at the University of Melbourne. Previous positions include Director of the Monetary and Financial Economics Program at the University of Melbourne, and President of the Victorian Branch of the Economics Society. His main areas of interest include Monetary Economics, exchange rate modelling and non-linear dynamics.

Yi Liu is an Assistant Professor of Economics at the University of South Alabama and obtained his PhD from Washington University in St Louis in 1995. He has published work with William Barnett and Mark Jenson in the journal *Macroeconomic Dynamics* (1997).

David Longworth is currently the Chief in the Bank of Canada's Research Department. Prior appointments include Chief in the Department of Monetary and Financial Analysis, and Deputy Chief in the International Department at the Bank of Canada. He joined the Bank of Canada in 1974 and gained a PhD from Massachusetts Institute of Technology in 1979.

Vance L. Martin is Reader of Economics in the Economics Department at the University of Melbourne. He has edited two books on non-linear models in economics with John Creedy, and his main areas of interest include monetary economics, exchange rate modelling and non-linear dynamics.

Koji Nakamura is an analyst in the Policy Planning Office at the Bank of Japan. He has an MA degree in Economics and an MBA degree from Boston University.

Hans-Eggert Reimers is a Professor in the Economics Department of the Fachhochschule Wismar. From 1991 to 1994 he worked in the Research Department of the Deutsche Bundesbank. He gained his PhD in Economics at the University of Kiel in 1991 and is the author of *Analysis of Cointegrated Variables with Vector Autoregressive Models* (1991).

Yen Chrystal Shih is currently Director General of the Economic Research Department at the Central Bank of China, Taiwan, which she joined in 1988. She served as an Adjunct Associate Professor in the Department of Banking at the National Chengchi University of Taiwan from 1991 to 1994. She gained her PhD in Economics at Ohio State University in 1987.

Erich Spoerndli is currently the Director of the Monetary Operations Division of the Swiss National Bank. Previous positions include, Head of the Economic Studies Section at the Swiss National Bank and Head of the Macro-Forecasting Unit at the Swiss Federal Institute of Technology in Zurich. Erich gained his PhD in Economics at Zurich University in 1971 and his main research interests include monetary economics and the statistical and methodological aspects of business cycle indicators.

Karl-Heinz Toedter is a Senior Economist in the Research Department at the Deutsche Bundesbank, Frankfurt am Main. He is author of *The Specification Problem in Econometrics* (Frankfurt, 1980).
