About the Editors

Sergei Kalinin is currently a research staff member at the Oak Ridge National Laboratory, Materials Sciences and Technology Division and Center for Nanophase Materials Science. He completed his Ph.D. in Materials Science at the University of Pennsylvania in 2002 (with Prof. Dawn Bonnell). His previous undergraduate and graduate work in Materials Science was conducted at Moscow State University, Moscow, Russia. The focus of his current research interests is interplay between electromechanical,

transport, and mechanical phenomena in inorganic and biological systems using local probes. He serves as a member of American Vacuum Society NSTD board and member of editorial board for Journal of Nanoelectronics and Optoelectronics. As a student, he earned multiple research awards including American Vacuum Society Graduate Student Award and several Materials Research Society Graduate Student Awards. He was recognized with the Ross Coffin Purdy Award of American Ceramics Society (2003) for the development of Scanning Impedance Microscopy for characterization of frequency-dependent transport on the nanoscale. He is also a recipient of Wigner Fellowship of Oak Ridge National Laboratory (2002) and an Oak Ridge National Laboratory Early Career Accomplishment Award for Science and Technology (2005). He has authored more than 70 scientific papers, six book chapters and five patents on various aspects of SPM.

Alexei Gruverman is currently a Research Associate Professor in the Department of Material Science and Engineering, North Carolina State University. He received his PhD degree in Solid State Physics from the Ural State University in Russia. After graduation, he worked as a post-doctoral researcher at the Joint Research Center for Atom Technology (JRCAT), Japan, where he initiated a project on scanning probe microscopy studies of ferroelectrics. He then joined Sony Corporation to work on the problems related to characterization and reliability of ferroelectric memory devices by SPM. In 2000, he joined the faculty at North Carolina State University. He has published over 80 articles in refereed journals, several book chapters and edited one book. His current research interests are in the field of ferroelectric nanostructures and thin films, nanoscale phenomena in ferroic materials, mechanical properties of biomaterials and non-volatile information storage technologies. He is a recipient of the Ikeda Award (2004) for contribution to SPM studies of ferroelectrics.
