Preface

Each of the first two editions of *The Prokaryotes* took a bold step. The first edition, published in 1981, set out to be an encyclopedic, synoptic account of the world of the prokaryotes—a collection of monographic descriptions of the genera of bacteria. The Archaea had not yet been formalized as a group. For the second edition in 1992, the editors made the decision to organize the chapters on the basis of the molecular phylogeny championed by Carl Woese, which increasingly provided a rational, evolutionary basis for the taxonomy of the prokaryotes. In addition, the archaea had by then been recognized as a phylogenetically separate and distinguishable group of the prokaryotes. The two volumes of the first edition had by then expanded to four. The third edition was arguably the boldest step of all. We decided that the material would only be presented electronically. The advantages were obvious and persuasive. There would be essentially unlimited space. There would be no restrictions on the use of color illustrations. Film and animated descriptions could be made available. The text would be hyperlinked to external sources. Publication of chapters would be seriatim—the edition would no longer have to delay publication until the last tardy author had submitted his or her chapter. Updates and modifications could be made continuously. And, most attractively, a library could place its subscribed copy on its server and make it available easily and cheaply to all in its community. One hundred and seventy chapters have thus far been presented in 16 releases over a six-year period. The virtues and advantages of the online edition have been borne out. But we failed to predict the affection that many have for holding a bound, print version of a book in their hands. Thus, this print version of the third edition shall accompany the online version.

We are now four years into the 21st century. Indulge us then while we comment on the challenges, problems and opportunities for microbiology that confront us.

Moselio Schaechter has referred to the present era of microbiology as its third golden age—the era of “integrative microbiology.” Essentially all microbiologists now speak a common language. So that the boundaries that previously separated subdisciplines from each other have faded: physiology has become indistinguishable from pathogenesis; ecologists and molecular geneticists speak to each other; biochemistry is spoken by all; and—mirabile dictu!—molecular biologists are collaborating with taxonomists.

But before these molecular dissections of complex processes can be effective there must be a clear view of the organism being studied. And it is our goal that these chapters in *The Prokaryotes* provide that opportunity.

There is also yet a larger issue. Microbiology is now confronted with the need to understand increasingly complex processes. And the *modus operandi* that has served us so successfully for 150 years—that of the pure culture studied under standard laboratory conditions—is inadequate. We are now challenged to solve problems of multimembered populations interacting with each other and with their environment under constantly variable conditions. Carl Woese has pointed out a useful and important distinction between empirical, methodological reductionism and fundamentalist reductionism. The former has served us well; the latter stands in the way of our further understanding of complex, interacting systems. But no matter what kind of synoptic systems analysis emerges as our way of understanding host–parasite relations, ecology, or multicellular behavior, the understanding of the organism as such is *sine qua non*. And in that context, we are pleased to present to you the third edition of *The Prokaryotes*.

Martin Dworkin
Editor-in-Chief

Foreword

The purpose of this brief foreword is unchanged from the first edition; it is simply to make you, the reader, hungry for the scientific feast that follows. These four volumes on the prokaryotes offer an expanded scientific menu that displays the biochemical depth and remarkable physiological and morphological diversity of prokaryote life. The size of the volumes might initially discourage the unprepared mind from being attracted to the study of prokaryote life, for this landmark assemblage thoroughly documents the wealth of present knowledge. But in confronting the reader with the state of the art, the Handbook also defines where more work needs to be done on well-studied bacteria as well as on unusual or poorly studied organisms.

This edition of *The Prokaryotes* recognizes the almost unbelievable impact that the work of Carl Woese has had in defining a phylogenetic basis for the microbial world. The concept that the ribosome is a highly conserved structure in all cells and that its nucleic acid components may serve as a convenient reference point for relating all living things is now generally accepted. At last, the phylogeny of prokaryotes has a scientific basis, and this is the first serious attempt to present a comprehensive treatise on prokaryotes along recently defined phylogenetic lines. Although evidence is incomplete for many microbial groups, these volumes make a statement that clearly illuminates the path to follow.

There are basically two ways of doing research with microbes. A classical approach is first to define the phenomenon to be studied and then to select the organism accordingly. Another way is to choose a specific organism and go where it leads. The pursuit of an unusual microbe brings out the latent hunter in all of us. The intellectual challenges of the chase frequently test our ingenuity to the limit. Sometimes the quarry repeatedly escapes, but the final capture is indeed a wonderful experience. For many of us, these simple rewards are sufficiently gratifying so that we have chosen to spend our scientific lives studying these unusual creatures. In these endeavors many of the strategies and tools as

well as much of the philosophy may be traced to the Delft School, passed on to us by our teachers, Martinus Beijerinck, A. J. Kluyver, and C. B. van Niel, and in turn passed on by us to our students.

In this school, the principles of the selective, enrichment culture technique have been developed and diversified; they have been a major force in designing and applying new principles for the capture and isolation of microbes from nature. For me, the “organism approach” has provided rewarding adventures. The organism continually challenges and literally drags the investigator into new areas where unfamiliar tools may be needed. I believe that organism-oriented research is an important alternative to problem-oriented research, for new concepts of the future very likely lie in a study of the breadth of microbial life. The physiology, biochemistry, and ecology of the microbe remain the most powerful attractions. Studies based on classical methods as well as modern genetic techniques will result in new insights and concepts.

To some readers, this edition of the *The Prokaryotes* may indicate that the field is now mature, that from here on it is a matter of filling in details. I suspect that this is not the case. Perhaps we have assumed prematurely that we fully understand microbial life. Van Niel pointed out to his students that—after a lifetime of study—it was a very humbling experience to view in the microscope a sample of microbes from nature and recognize only a few. Recent evidence suggests that microbes have been evolving for nearly 4 billion years. Most certainly those microbes now domesticated and kept in captivity in culture collections represent only a minor portion of the species that have evolved in this time span. Sometimes we must remind ourselves that evolution is actively taking place at the present moment. That the eukaryote cell evolved as a chimera of certain prokaryote parts is a generally accepted concept today. Higher as well as lower eukaryotes evolved in contact with prokaryotes, and evidence surrounds us of the complex interactions between eukaryotes and

prokaryotes as well as among prokaryotes. We have so far only scratched the surface of these biochemical interrelationships. Perhaps the legume nodule is a pertinent example of nature caught in the act of evolving the “nitrosome,” a unique nitrogen-fixing organelle. Study of prokaryotes is proceeding at such a fast pace that major advances are occurring yearly. The increase of this edition to four volumes documents the exciting pace of discoveries.

To prepare a treatise such as *The Prokaryotes* requires dedicated editors and authors; the task has been enormous. I predict that the scientific community of microbiologists will again show its appreciation through use of these volumes—such that the pages will become “dog-eared” and worn as students seek basic information for the

hunt. These volumes belong in the laboratory, not in the library. I believe that a most effective way to introduce students to microbiology is for them to isolate microbes from nature, i.e., from their habitats in soil, water, clinical specimens, or plants. *The Prokaryotes* enormously simplifies this process and should encourage the construction of courses that contain a wide spectrum of diverse topics. For the student as well as the advanced investigator these volumes should generate excitement.

Happy hunting!

Department of Ecology and Evolutionary
Biology
Tucson, AZ 85721
USA

Edgardo Moreno

Tropical Disease Research Program
(PIET)
Veterinary School, Universidad Nacional
Costa Rica

Ignacio Moriyón

Department of Microbiology
University of Navarra
32080 Pamplona
Spain

Annette Moter

Institut für Mikrobiologie und Hygiene
Universitaetsklinikum Chariteacute
Humboldt-Universität zu Berlin
D-10117 Berlin
Germany

Eppe Gerke Mulder

Laboratory of Microbiology
Agricultural University
6703 CT Wageningen
The Netherlands

Yasuyoshi Nakagawa

Biological Resource Center (NBRC)
Department of Biotechnology
National Institute of Technology and
Evaluation
Chiba 292-0818
Japan

Francis Nano

Department of Biochemistry & Microbiology
University of Victoria
Victoria V8W 3PG
Canada

Kenneth H. Nealson

Department of Earth Sciences
University of Southern California
Los Angeles, CA 90033
USA

Douglas C. Nelson

Department of Microbiology
University of California, Davis
Davis, CA 95616
USA

Klaus Neuhaus

Department of Pediatrics, Infection, Immunity,
and Infectious Diseases Unit
Washington University School of Medicine
St. Louis, MO 63110
USA

Diane G. Newell

Veterinary Laboratory Agency (Weybridge)
Addlestone
New Haw
Surrey KT1 53NB
UK

Irene L. G. Newton

Department of Organismic and Evolutionary
Biology
Harvard University
Cambridge, MA 02138
USA

S.A. Nierzwicki-Bauer

Department of Biology
Rensselaer Polytechnic Institute
Troy, NY
USA

M. Fernanda Nobre

Departamento de Zoologia
Universidade de Coimbra
3004-517 Coimbra
Portugal

Philippe Normand

Laboratoire d'Ecologie Microbienne
UMR CNRS 5557
Université Claude-Bernard Lyon 1
69622 Villeurbanne
France

Steven J. Norris

Department of Pathology and Laboratory
Medicine and Microbiology and Molecular
Genetics
University of Texas Medical School at
Houston
Houston, TX 77225
USA

Howard Ochman

Department of Biochemistry and Molecular
Biophysics
University of Arizona
Tucson, AZ 85721
USA

Gary E. Oertli

Molecular and Cellular Biology
University of Washington
Seattle, WA 98195-7275
USA

Itzhak Ofek

Department of Human Microbiology
Tel Aviv University
69978 Ramat Aviv
Israel

Bernard Ollivier

Laboratoire ORSTOM de Microbiologie des
Anaérobies
Université de Provence
CESB-ESIL
13288 Marseille
France

Scott L. O'Neill

Department of Epidemiology and Public
Health
Yale University School of Medicine
New Haven, CT 06520-8034
USA

Aharon Oren

Division of Microbial and Molecular
Ecology
The Institute of Life Sciences
and
Moshe Shilo Minerva Center for Marine
Biogeochemistry
The Hebrew University of Jerusalem
91904 Jerusalem
Israel

Jani L. O'Rourke

School of Microbiology and Immunology
University of New South Wales
Sydney, NSW 2052
Australia

Jörg Overmann

Bereich Mikrobiologie
Department Biologie I
Ludwig-Maximilians-Universität München
D-80638 München
Germany

Norman R. Pace

Department of Molecular, Cellular and
Developmental Biology
University of Colorado
Boulder, CO 80309-0347
USA

Norberto J. Palleroni

Rutgers University
Department of Biochemistry and
Microbiology
New Brunswick 08901-8525
New Jersey
USA

Bruce Panilaitis

Department of Chemical and Biomedical
Engineering
Tufts University
Medford, MA 02155
USA

Nickolas Panopoulos

Department of Plant Pathology
University of California-Berkeley
Berkeley, CA 94720
USA

Yong-Ha Park

Korean Collection for Type Cultures
Korea Research Institute of Bioscience &
Biotechnology
Taejeon 305-600
Korea

Matthew R. Parsek

University of Iowa
Iowa City, IA 52242
USA

Bruce J. Paster

Department of Molecular Genetics
The Forsyth Institute
Boston, MA 02115
USA

Jerome J. Perry

3125 Eton Road
Raleigh, NC 27608-1113
USA

Jeannette Pham

The CDS Users Group
Department of Microbiology
South Eastern Area Laboratory Services
The Prince of Wales Hospital Campus
Randwick NSW 2031
Australia

Harvey M. Pickrum

Proctor and Gamble Company
Miami Valley Laboratories
Cincinnati, OH 45239
USA

Dietmar H. Pieper

Gesellschaft für Biotechnologische Forschung
Division of Microbiology
Braunschweig D-38124
Germany

Beverly K. Pierson

Biology Department
University of Puget Sound
Tacoma, WA 98416
USA

Mariagrazia Pizza
IRIS, Chiron SpA
53100 Siena
Italy

Jeanne S. Poindexter
Department of Biological Sciences
