<i>List of Tables</i>	vii
<i>List of Figures</i>	viii
<i>Notes on Contributors</i>	x

1 Introduction – Understanding Mergers and Acquisitions in the 21st Century: A Multidisciplinary Approach <i>Killian J. McCarthy and Wilfred Dolfsma</i>	1
---	---

## **Part I Setting the Scene**

### **A Perspective from Economics and Law**

2 The Business Environment – Mergers and Merger Waves: A Century of Cause and Effect <i>Killian J. McCarthy</i>	11
3 The Legal Environment – The Same but Different? A Comparison of the Regulatory Regimes of 21st-Century Europe, the USA and China <i>Odhran James McCarthy</i>	37

## **Part II Explaining M&A Performances**

### **A Perspective from Economics and Business**

4 Firm Size – When Bigger Isn't Always Better: A Study of Merger and Acquisitions by Small and Medium Enterprises <i>Utz Weitzel and Killian J. McCarthy</i>	79
5 Merger Motives – Merger Motives and the Realization of Gains <i>Killian J. McCarthy and Utz Weitzel</i>	109
6 Shareholder Optimism – Shareholders' Expectations, Aspiration Levels and Mergers <i>Enrico Diecidue, Jeroen van de Ven and Utz Weitzel</i>	148

**A Perspective from Psychology  
and Sociology**

- 7 Culture – Addressing Culture in Mergers and Acquisitions 167  
*Christine Coisne*
- 8 Managerial Power – Power, and the Destruction of Value  
in Mergers and Acquisitions 198  
*Claire E. Ashton-James, Killian J. McCarthy and Anca  
Dranca-Iacoban*
- 9 Personality – Mergers as Marriages: Using Attachment  
Theory to Understand Mergers and Acquisitions 223  
*Boyana N. Petkova and Killian J. McCarthy*

**Part III Moving Forward**

**A Perspective from Computer Science**

- 10 A View to the Future – A Data-Driven Approach to  
Mergers and Acquisitions 253  
*Auke-Dirk Pietersma and Killian J. McCarthy*
- Index* 283

# Tables

3.1	Merger Notifications, Investigations and Second Requests	40
3.2	Merger Violations and Remedies	43
3.3	ECMR Phase I & II Outcomes	54
3.4	MOFCOM Challenges	56
4.1	SMEs in Europe	81
4.2	SME Merger Motives	86
4.3	SME M&As	91
4.4	Pairwise Correlations	94
4.5	Completed Deals by Size	95
4.6	Logit Maximum Likelihood Estimation	96
4.7	Frequency and Deal Size of SME M&A	97
4.8	M&As among SMEs	98
4.9	Cash and Stock as a Means of Payment	100
4.10	Cash and Stock Payments: Regression Results	102
5.1	Programming for Merger Motives	119
5.2	Number of Merger Motives per Year	122
5.3	Merger Motives per Industry	123
5.4	Concurrent Merger Motives	124
5.5	Pairwise Correlation, Means and Standard Deviations	125
5.6	Test of Hypotheses 1 to 4 (Individual Motives)	127
5.7	Test of Hypotheses 1 to 4 (Motive Pairs)	129
5.8	Test of Hypothesis 5	132
7.1	Integrative Model of Cultural Orientations	180
7.2	Features of Successful Integration	189
8.1	The Effects of Power on the Merger Process	211
9.1	The Merger Process	226
9.2	Exploratory Factor Analysis Results	237
9.3	Managerial Interactions	241
10.1	Different Types of Non-Linear Kernels That Are Often Used in Support Vector Machines	273

# Figures

2.1	Merger Waves: 1890–2011	12
2.2	The First & Second Merger Waves by Numbers	13
2.3	The Third & Fourth Merger Waves by Numbers	17
2.4	International Deal Values in the Fifth Wave	21
2.5	US Interest Rates 1954–2012	22
2.6	Inflation-Adjusted Deal Values in the Fifth and Sixth Waves	25
2.7	Worldwide Deal Numbers and Values	28
3.1	Introduction of Antitrust Laws	38
3.2	HHI & Merger Regulation	46
3.3	ECMR Applicability	49
3.4	The Rise in M&As in China in Millions of Dollars, and a Trend Line 1990–2010	55
4.1	Average Percentage of Stock Payment over Years and Firm Types	100
5.1	Frequency of Specific Merger Motives per Industry	124
6.1	Expectations and the Degree of Merger-Seeking	157
6.2	Non-monotonicity in the Degree of Merger-Seeking	159
7.1	Managing Cultural Differences: From Neglect to Attention	176
7.2	Cross-Cultural Management as Key Process Moderator	184
8.1	The M&A Process	201
9.1	Attachment Dimensions and Mindsets	231
9.2	Attachment Types of All Participants	238
9.3	Attachment Types of Leaders	239
10.1	Different Types of Functions. The Right Lines and Curves Illustrate Different Ways to Model the Train Data. These Range from Simple Lines to Complex Polynomial Functions	260
10.2	Cross-Fold Validation. Cross-Fold Validation Is a Technique for Assessing a Model's Performance. Its Main Use Is to Estimate How Its Predictions Match up with Practice. This Is Achieved through Multiple Train and Validate Phases, Where Each Phase Observes a Different Portion of the Available Data	261
10.3	Hypothesis Space with ( $k = 1$ ). Hypothesis Space Generated from Ten Successful and Ten Unsuccessful	

	M&As Using a Nearest-Neighbour Approach. The Euclidean Distance Was Used as the Metric. All Features Are Linearly Scaled between $[-1,1]$ to Make the Scales Comparable. Regions and Patterns Coloured Dark Grey Represent Successful Mergers, Whereas the Light Grey Patterns and Areas Represent Unsuccessful Deals	265
10.4	Hypothesis Space with ( $k = 3$ ). Hypothesis Space Generated from Ten Successful and Ten Unsuccessful M&As Using a Nearest-Neighbour Approach. The Euclidean Distance Was Used as the Metric. All Features Are Linearly Scaled between $[-1,1]$ to Make the Scales Comparable. Regions and Patterns Coloured Dark Grey Represent Successful Mergers, Whereas the Light Grey Patterns and Areas Represent Unsuccessful Deals	266
10.5	Hypothesis Space with ( $k = 12$ ). Hypothesis Space Generated from Ten Successful and Ten Unsuccessful M&As Using a Nearest-Neighbour Approach. The Euclidean Distance Was Used as Metric. All Features Are Linearly Scaled between $[-1,1]$ to Make the Scales Comparable. Regions and Patterns Coloured Dark Grey Represent Successful Mergers, Whereas the Light Grey Patterns and Areas Represent Unsuccessful Deals	267
10.6	Support Vector Machines. The Support Vector Machines Algorithm Constructs a Hyperplane. This Acts as a Decision Boundary by Separating the Two Classes, Such That Each Class Is Situated on One Side of the Plane	269
10.7	Two Functions. It Is a Trivial Task 'For the Naked-Eye' to Separate the Two Functions $f$ and $g$ . A Linear Classification Algorithm Has Virtually No Means of Correctly Distinguishing the Two	272
10.8	Linear Separation. In Certain Cases It Can Be Easier to Solve a Problem When It Is Projected into a Different Space. In This Situation, Adding an Additional Feature $z = x^2 + y^2$ to Figure 10.7 Makes Linear Separation Possible, as Can Be Seen from the Gap in the Vertical Axis	273
10.9	Kernels. Kernels Other than the Standard Inner Product Allow the Construction of Non-Linear Models. Although the Models Can Model Non-Linear Relations, the Maximum Margin-Hyperplane Algorithm Is Not Affected	274

# Contributors

**Claire Ashton-James** is Assistant Professor of Social and Organizational Psychology at the VU University, Amsterdam. She holds a PhD in social psychology from the University of New South Wales, Australia. Before moving to the Netherlands, she taught markets and management studies at Duke University, USA, and completed a postdoctoral fellowship at the University of British Columbia, Canada. Her research interests include the effect of non-conscious social influences on thought, emotion, behaviour and power.

**Christine Coisne** is a full-time faculty member who joined EDHEC Business School, France, in 1990 and was appointed Deputy Director of the bachelor's programme from 2002 to 2008, holding responsibility for international programme development. Her primary teaching and research area revolves around cross-cultural communication and management. She was appointed Director of the bachelor's programme in Lille in September 2002. In charge of international relations and the implementation of the International Business and Management Program, she was particularly active in the field of international programme development and accreditations. The Espeme Program has been extremely successful in the last few years and is now ranked in the top-five bachelor's programmes in business administration in France. Christine has been a member of the EDHEC faculty since 1990. She teaches cross-cultural communication and management classes at undergraduate, graduate and executive levels and is responsible for business simulations in the bachelor's and master's programmes. Her academic interests lie in international business and culture. Her initial research work in the area of cross-cultural management focused on studying the cultural fit in international M&A and establishing the relevance of the due cultural diligence process. Her present research deals with managing culture in cross-border mergers and acquisitions.

**Enrico Diecidue** is Associate Professor of Decision Sciences at INSEAD in France, and he holds a PhD from the Center for Economic Research, Tilburg University, the Netherlands. Since 2001 he has been a resident faculty member at INSEAD, except for 2008–2009, when he was

a visiting professor at Wharton, University of Pennsylvania, USA, and 2010–2011, when he was on sabbatical in the School of Economics, Erasmus University, Rotterdam, the Netherlands. His main research interests are in individual decision-making under uncertainty, health decisions and experimental economics. He is interested in the role of regret, aspiration levels and time in individual decisions. His current research also addresses the role of groups in complex and ambiguous decisions. Enrico's research has appeared in leading journals in economics and management. He is on the editorial board of the *Journal of Risk and Uncertainty* and is an associate editor for *Decision Analysis*. He teaches MBA, executive MBA and executive participants on topics such as uncertainty, data and judgement, decision-making under uncertainty, and management decision-making. He has won teaching awards at INSEAD and Wharton.

**Wilfred Dolfsma** is Professor of Innovation at the University of Groningen, the Netherlands. He is an economist and philosopher, and he holds a PhD in economics from Erasmus University, Rotterdam, the Netherlands. He is corresponding editor for the *Review of Social Economy*. His research interests are innovation and technological development, media industries, consumption, and the developments in and effects of intellectual property rights. His *Institutional Economics and the Formation of Preferences* (2004) won him the Gunnar Myrdal Prize. His most recent books include *Media & Economics* (ed. with Richard Nahuis, 2005), *Knowledge Economies* (2008), *Companion to Social Economics* (ed. with John Davis, 2008) and *The Nature of the New Firm* (ed. with Killian J. McCarthy and Maya Fiolet).

**Anca Dranca-Iacoban** is a PhD candidate in the Department of Human Resource Management at the University of Groningen. Anca has a research master's in business, and a bachelor's in organizational psychology from the University of Bucharest, Romania. With a background in a student non-governmental organization, where she focused on human resources, her research interests include leadership and the influence of power on behaviour, cognition and affect.

**Killian J. McCarthy** is Assistant Professor at the University of Groningen. An economist and strategist, he gained a PhD in the

economics of corporate strategy, and ‘writes’ about mergers and acquisitions. His research interests include business and industrial organization, and strategy. He has also published on the topics of corporate tax competition, money laundering and criminal finance, as well as the influence of media power on both consumer and business sentiment. Killian holds a first-class bachelor’s degree in business from University College Cork, Ireland, which he earned with a double-major in economics and law, and two *cum laude* master’s degrees in economics, which he earned at the School of Economics, Utrecht University, the Netherlands, and the University of Vienna, Austria. Additionally, Killian is a scientific adviser with ISPIM (the International Society for Professional Innovation Management).

**Odhran James McCarthy** works as an analyst for the United Nations Interregional Crime and Justice Research Institute and is based in Turin, Italy. He obtained a bachelor’s of law from University College Cork, Ireland, with a joint honours in law, and German language and literature. For this he spent time at the Philipps Universität Marburg, Germany. In addition, he holds two *cum laude* master’s degrees in political science and international law, and the law of international organizations, which he obtained, respectively, at the University College Cork, Ireland, and the Rijksuniversiteit Groningen, the Netherlands. His particular field of interest is international law and security.

**Boyana Petkova** is Assistant Professor at the Vrije Universiteit Amsterdam. Boyana wrote her PhD on power and its influences on buyer-supplier exchanges at the University of Groningen. For one of the papers in her thesis, she received a PhD student award at the largest conference in the field of operations management (EUROMA conference 2011). Originally an engineer, Boyana holds bachelor’s and master’s degrees (*cum laude*) in industrial engineering and management. Her particular interest is in quantifying aspects of buyer-supplier relationships that are considered complex, ‘soft’ and difficult to measure (such as trust or sustainability) and relating them to ‘hard’ performance outcomes.

**Auke Pietersma** is a software engineer at Horus View and Explore, a high-tech and innovative company which focuses on high-quality 360 degree projections, and a data manager at the University of Groningen.

He obtained a degree in software engineering at the Polytechnic Institute Groningen, the Netherlands. He also holds a master of science degree in artificial intelligence, autonomous perceptive systems, which he obtained at the University of Groningen.

**Jeroen van de Ven** is Assistant Professor at the Amsterdam Centre for Law and Economics, the University of Amsterdam, and research fellow at the Tinbergen Institute, the Netherlands. He obtained his PhD from the Center for Economic Research, Tilburg University, the Netherlands, in 2003 for his dissertation 'Psychological Sentiments and Economic Behaviour'. He has held visiting positions as a PhD student at GREMAQ (University of Toulouse 1) and as an assistant professor at the University of Essex, Nottingham University and the University of California Santa Barbara, USA. After his PhD he worked for two years as a researcher at the Netherlands Bureau for Economic Policy Analysis (CPB). His research interests are in the fields of behavioural economics, and economics and psychology. His research topics include the relationship between rewards and motivation, discrimination, communication and lie detection. He received a VENI scholarship from the Dutch National Science Organisation (NWO), and was awarded the Christiaan Huygens Prize for best dissertation in economics.

**Utz Weitzel** is Professor of Finance in the Economics Department of Nijmegen School of Management, the Netherlands. He studied economics and business administration at the University of Augsburg and the University of Bonn, Germany, completing his master's in international business and economic development at the University of Reading, UK. He obtained a PhD from the Humboldt-University Berlin and was a postdoc at the J. L. Kellogg Graduate School of Management, Northwestern University, Evanston, Illinois, USA. Before his appointment at Radboud University Nijmegen, he was affiliated with the School of Economics, Utrecht University, the Netherlands, and the Max Planck Institute of Economics in Jena, Germany. His research topics include mergers and acquisitions, financial decision-making, experimental economics and finance, corporate governance and entrepreneurial decisions.
