Neuropsychological rehabilitation of childhood brain injury: a practical guide / edited by Jonathan Reed, Katie Byard, Howard Fine.

p. ; cm.

Includes bibliographical references and index.

Summary: "Increasing numbers of children and young people are surviving road traffic accidents and birth complications but are being left with neurological disability. Although a brain injury can be a potentially devastating childhood medical condition Neuropsychological rehabilitation of childhood brain injury explores the developing field of neuropsychology to aid rehabilitation. The book brings together contributions from leading international clinicians and researchers to describe not only what we understand about childhood brain injury but also what has been demonstrated to help and possible innovative directions that can be taken in the future. By including a comprehensive review of the neuropsychological consequences of child brain injury alongside solid research outcomes this book provides an authoritative guide on how to help children with brain injury using neuropsychology.

Acknowledgements

We would like to thank the contributors for making this book possible.

We would also like to thank all the children and families we have worked with over the years, who have shared their experiences, and taught and inspired us.

A great deal of gratitude is owed to the families and young people who have offered permission to use their interventions as case studies for the chapters. In order to protect their right to privacy and confidentiality, names and identifiers have been changed, without impacting on the integrity of the case study.

Special thanks to Charlotte Smart for help with production, and to our colleagues in Recolo, for their commitment, enthusiasm and stimulating work in child neuropsychological rehabilitation.

We would also like to express our thanks to the Recolo Business Team, who have supported our endeavours in drawing the project together, managing the logistical time constraints and generally keeping the swan gliding.

Finally, many thanks to Nicola Jones from Palgrave for commissioning and supporting this project, and to Elizabeth Forrest for excellent editorial support.
