MICROWAVES

PROCEEDINGS OF THE 4th INT. CONGRESS ON MICROWAVE TUBES

with 1266 illustrations

Scheveningen, 3 - 7 september 1962

1963

CENTREX PUBLISHING COMPANY - EINDHOVEN

Publisher's note:

Closing date for all entries in this book 1st December 1962.

This book contains XVI + 813 pages and 1266 illustrations.

U.D.C. nr.: 621.385.6 : 061.32.

PART		P.
A	DIODES and Grid-controlled tubes	1
1.	K.W. HINKEL, Eindhoven, Holland Über den Raumladungsbegrenzten Influenzstrom in einer ebenen Diode bei grossen Signalen und langen Elektronenlaufzeitwinkeln unter Berücksichtigung von Sekun- däremission der Elektroden (mit 11 Abbildungen)	3
2.	YASU HARU SUEMATAU and TAKUO MARUTANI, Tokyo, Japan. A quarter-wave coupled three ESAKI diodes micro-wave amplifier (with 10 illustrations)	9
B	KLYSTRONS	15
1.	F. PASCHKE, Munich, Germany The influence of space-charge and geometry on the efficiency of a two-cavity klystron oscillator (with 8 illustrations)	17
2.	N.E. DIXON and P.S. MATTHEWS, Hayes, Middlesex. Parallel operation of pulsed broadband klystron amplifiers (with 6 illustrations)	23
3.	R. ASTOR et J. CAYZAC, Paris, France. Perfectionnements aux amplificateurs de puissance a klystron (avec 7 illustrations)	27
4.	J.R. HECHTEL and A. MIZUHARA, San Carlos, Cal., U.S.A. An electrostatically focussed klystron amplifier (with 8 illustrations)	31
5.	DONALD H. PREIST, San Carlos, Cal., U.S.A. Multipactor motions in micro-wave tubes (with 13 illustrations)	34
6.	Y. YOSHIDA and Y. WATANABE, Okuba-cho, Japan. Stabilized high-power klystron oscillator (with 22 illustrations)	40
7.	R.B. NELSON, Palo Alto, Cal., U.S.A. A high-power floating-drift-tube klystron	49
8.	JAMES N. LIND, Burlington, Mass., U.S.A. Hollow-beam klystron with modulating anode	54
9.	LINDSEY B. ANDERSON, Burlington, Mass., U.S.A. ABRAHAM BERS, Massachusetts, Mass., U.S.A. A broadband Megawatt hollow-beam multicavity klystron (with 10 illustrations)	60

PART		P.
C	TRAVELLING- WAVE TUBES	
1.	R.J. COLLIER and G.D. HELM, Murray Hill N.J., U.S.A. A 2-kilowatt c.w. travelling-wave tube for C-band communications (with 8 illustrations)	71
2.	R. LIEBSCHER, E. MAYERHOFER, P. MEYERER, R. STOCK and A. KRAUS Munich, Germany. A high-power travelling-wave tube for the frequency range 5,9 to 6,5 Gc/s . . . (with 9 illustrations)	75
3.	G. DUBE and P. PALLUEL, Orsay, France A high-power travelling-wave tube for C-band (with 10 illustrations)	79
4.	A.J. MONK, Harlow, England. The design of a 100 MW 400 Mc/s pulsed travelling-wave tube (with 3 illustrations)	83
5.	C.H. DIX and T.J. LANE, Wembley, England. The design of a 250 KW 400 Mc/s travelling-wave tube. (with 9 illustrations)	87
6.	M.O. BRYANT, Harlow, England. Some experiments on the effect of a circuit sever on high-power travelling-wave tube efficiency (with 4 illustrations)	92
7.	J.A. RUETZ, Palo Alto, Cal., U.S.A. Resonant circuit oscillations in travelling-wave tubes (with 7 illustrations)	94
8.	D.C. FORSTER, J.E. NEVINS Jr. and M.R. CURRIE, Malibu, Cal., U.S.A. Highpower c.w. millimeter-wave amplifiers and oscillators (with 17 illustrations)	98
9.	J.M. WINWOOD, Salfords, England. A low-noise travelling-wave tube for 26,000-40,000 Mc/s (with 9 illustrations)	106
10.	P. DELPHIN, Orsay, France. Une tube à onde progressive à faible facteur de bruit dans la bande des 58 GHz (avec 9 illustrations)	111
11.	T. BERCELI and T. SÁRKÁNY, Budapest, Hungary. AM - to PM conversion and AM compression of travelling-wave tube amplifiers (with 6 illustrations)	118
12.	K. PÖSCHEL and H.J. LINN, Munich, Germany. Calculations concerning the properties of E-type travelling-wave amplifiers with arbitrary signal level (with 6 illustrations)	120
13.	S.F. PAIK, Burlington, Mass., U.S.A. The travelling-wave amplification as a parametric process (with 7 illustrations)	123

PART		P.
D	CROSSED-FIELD DEVICES	131
1.	J. ARNAUD, F. DIAMAND and B. EPSZTEIN, Orsay, France. Spurious phenomena in M-type tubes (with 7 illustrations)	133
2.	G. MOURIER, J. NALOT et W. SOBOTKA, Orsay, France Sur trois modèles de carcinotron M de grande puissance (avec 18 illustrations)	139
3.	G. KANTOROWIEZ, J. NALOT and P. VIAL, Orsay, France High-power TPOM amplifiers (with 7 illustrations)	146
4.	B. VALTERSSON, Stockholm, Sweden. Experiments with a pulsed L-band coaxial M-carcinotron with azimuthal magnetic field (with 17 illustrations)	151
5.	J. ARNAUD, Orsay, France. The coaxial crossed-field tubes (with 13 illustrations)	157
6.	K. KAKIZAKI, Kawasaki-shi, Japan. Backward-wave tube feedback oscillators (with 18 illustrations)	161
7.	H. STEYSKAL, Stockholm, Sweden. Studies on c.w. magnetron amplifiers with continuous cathode and re-entrant beam (with 10 figures)	168
8.	G.E. POMBROWSKI, Storrs, Conn., U.S.A. T.E. RUDEN, Burlington, Mas., U.S.A. Large signal calculation of amplatron performance (with 15 illustrations)	172
9.	H.L. McDOWELL and J. FEINSTEIN, Union, N.J., U.S.A. The S-F-D- crossed-field amplifier (with 10 illustrations)	179
10.	J.F. HULL, G.E. POKORNY, G.P. KOOYERS, P.N. HESS and E.K. SHAW, San Carlos, Cal., U.S.A. Recent advances in non-re-entrant crossed-field forward amplifiers (with 22 illustrations)	186
11.	S.P. YU, Schenectady, N.Y., U.S.A. An empirical solution to the steady state magnetron space-charge distribution . . (with 11 illustrations)	197
12.	G.H. PLANTINGA, Eindhoven, Holland. Pulsed magnetron on for 4 and 2.5 mm wave-length. (with 4 illustrations)	202

PART E	PARAMETRIC DEVICES	P. 207
1.	ROBERT ADLER, Chigago, Ill., U.S.A. Non-degenerate electron beam parametric amplifiers (with 11 illustrations)	209
2.	G.O. CHALK and A. FROHLICH, Chelmsford On the excess noise in Adler tubes (with 10 illustrations)	216
3.	P.A.M. HART, Eindhoven, Holland. Interception, scattering and multivelocity effects in a transverse-wave electron-beam (with 8 illustrations)	222
4.	Mrs. MARTINOT, LAGARDE et BLUET, Orsay, France. Etude d'un tube paramétrique à faisceau (avec 4 illustrations)	228
5.	P.A. STURROCK, A. KARP and G. VAN HOVEN, Stanford, Cal., U.S.A. Parametric refrigeration, discussion and experimental verification of the removal of slow-wave noise (with 8 illustrations)	231
6.	M.C. DAVIES and K.T.W. MILNE, Wembley, England. The parametric reduction of the amplitude of slow space-charge waves in an ex- perimental device (with 9 illustrations)	236
7.	W.H. LOUISELL, L.R. WALKER and J.P. GORDON, Murray Hill, N.J., U.S.A. Quantum statistical properties of ideal phase-sensitive receivers (with 5 illustrations)	242
8.	S. SAITO, Tokyo, Japan. M. KENMOKU and T. MATSUOKA, Kawasaki, Japan. D.C.-pumped cyclotron beam tubes using quadrifilar helix (with 15 illustrations)	244
9.	J.C. BASS, D.C. RICKARD and M.F.G. WILSON, Aldermaston, England Theoretical and experimental investigation of d.c.- pumped cyclotron-wave am- plifiers (with 17 illustrations)	249
10.	J.E. DALLEY and C.C. JOHNSON, Salt Lake City, Utah, U.S.A. A d.c.-pumped coupled mode parametric amplifier with depressed collector . . . (with 11 illustrations)	261
11.	S. MAO and A.E. SIEGMAN, Stanford, Cal., U.S.A. Cyclotron-wave amplification using simultaneous r.f. coupling and d.c. pumping (with 14 illustrations)	268
12.	T. WESSEL-BERG, Stanford, Cal., U.S.A. K. BLØTEKJAER, Kjeller, Norway. Minimum noise temperature of transverse-wave d.c.-pumped electron beam ampli- fiers (with 7 illustrations)	277

PART		P.
13.	H. SEUNIK, Munich, W-Germany. Amplification of the transverse waves of an electron-beam in space-periodic magnetic field jumps (with 8 illustrations)	286
14.	K. BLØTEKJAER, B. MÅLSNESS and A. NORDBOTTEN, Bergen, Norway. An experimental investigation of transverse-wave interaction in periodic magnetostatic fields (with 4 illustrations)	295
15.	T. KITSUREGAWA and K. SHIRAHATA, Amagasaki, Japan. Improvement of the stability of parametric amplifiers (with 7 illustrations)	299
16.	H. LE GALL et A.J. BERTEAUD, Bellevue, France. Etude et réalisation d'un amplificateur paramétric à ferrite (avec 13 illustrations)	306
F.	GAS-DISCHARGE DEVICES	315
1.	P.B. CURTIS and R.L. FERRARI, Wembley, England. A study of the plasma travelling-wave amplifier (with 5 illustrations)	317
2.	M.T. VLAARDINGERBROEK and K.R.U. WEIMER, Eindhoven, Holland. Some aspects of the interaction of an electron beam and a plasma (with 6 illustrations)	322
3.	M.A. ALLEN, G.S. KINO, J. SPATTER and H.L. STOVER, Stanford, Cal., U.S.A. Electron beam-plasma interaction (with 3 illustrations)	327
4.	M. CHODOROW, J. EIDSON and G.S. KINO, Stanford, Cal. U.S.A. Normal mode theory for electron-beam-plasma amplification (with 5 illustrations)	333
5.	D.J. KNIGHT and D. WALSH, Oxford, England. Millimeter wave harmonics from a gas discharge (with 3 illustrations)	337
G	TUBES OF SPECIAL DESIGN	341
1.	Y. SUEMATSU and K. MORITA, Tokyo, Japan H. ISOBE, Kawasaki, Japan A. AZUMI, Akashi, Japan. Generation of millimeter waves by means of electron beam cyclotron resonance (with 11 illustrations)	343
2.	D.M. STEVENSON and A. REDDISH, Wembley, England. A fast oscillator using cyclotron resonance (with 13 illustrations)	348
3.	K. YAMANOUCHI, Y. SHIBATA and Y. KOIKA, Tokyo, Japan. Cyclotron fast wave tube using spatial harmonic interaction: the travelling-wave peniotron (with 16 illustrations)	355

PART		P.
4.	J. DAIN and R.R. THOMPSON, Chelmsord, England. A cyclotron resonance frequency multiplier (with 9 illustrations)	363
5.	G.E. DOMBROWSKI, Storrs, Conn., U.S.A. Theoretically predicted characteristics of the "EAL" or electromagnetic amplifying lens (with 8 illustrations)	366
6.	R.M. PHILLIPS, Palo Alto, Cal., U.S.A. The Ubitron as a high-power millimeter-wave amplifier (with 5 illustrations)	371
7.	A.J. LICHTENBERG, M.E.B. MOFFAT and H. MOTZ, Oxford, England. Production of a highly bunched electron beam for a submillimeter wave undulator (with 5 illustrations)	375
8.	P.D. COLEMAN, Urbana, Ill., U.S.A. Coherent Cerenkov radiation produced by a bunched electron beam traversing a plasm and ferrite medium (with 12 illustrations)	379
9.	J.M. BRUMBAUGH, L.J. NICASTRO, and J. VOLMER, Camden, N.J., U.S.A. L.W. ZELBY, Philadelphia, Pa., U.S.A. A new type Cerenkov Generator; theory and experiment (with 4 illustrations)	387
10.	K.K.N. CHANG and P.E. CHASE, Princeton, N.J., U.S.A. A rigorous large-signal analysis on harmonic generation using parametric diodes. (with 5 illustrations)	395
11.	R.W. WILMARTH and R.J. BLANCHARD, Nutley, N.J., U.S.A. The backward-wave converter. (with 11 illustrations)	398
H	MASERS	403
1.	J.C. WALLING and D.H.J. BODY, Salfords, England. A wide-band travelling-wave maser (with 13 illustrations)	405
2.	G.E. WEIBEL, Bayside L.I.(N.Y.), U.S.A. Traveling-wave maser with tuning range from 4 to 6 mm. (with 11 illustrations)	410
3.	A.K. KAMAL and S.D. SIMS, Lafayette Ind., U.S.A. The effects of temperature on the output of a pulsed ruby laser (with 18 illustrations)	418
4.	H. ROTHE, Karlsruhe, Deutschland. Messungen am Reflexionsmaser und Bestimmung der komplexen Suszeptibilität von Chromkaliumcyanid bei der Temperatur des flüssigen Heliums (mit 10 Abbildungen)	428

PART	P.
5. M. DI DOMENICO Jr., J.R. FONTANA, R.H. PANTELL, O. SVELTO and J. WEAVER, Stanford, Cal., U.S.A. Generation of submillimeter radiation by mixing of optical wave lengths (with 4 illustrations)	432
6. B.J. McMURTY and J.B. GAENZLE Mtn. View, Cal., U.S.A. A.E. SIEGMAN, Stanford, Cal., U.S.A. Broadband detectors for microwave modulated light (with 8 illustrations)	434
7. P.A. LINDSAY, M. CIFTAN and S. KOOZEKANAKI, Burlington, Mass., U.S.A. An efficient optical maser modulation scheme (with 6 illustrations)	439
8. P. LAURES, Orsay, France. Possibilité d'action laser dans l'infrarouge lointain (avec 5 illustrations)	442
9. A.S. GRASSJUK and A.N. ORAJEVSKI, MOSKOW, U.S.S.R. Transient processes in beam masers (with 8 illustrations)	446
I NOISE	451
1. B.P. ISRAELSEN and R.W. PETER, Palo Alto, Cal., U.S.A. Progress in low-noise traveling-wave tubes (with 13 illustrations)	453
2. G.E. BOSCH, K.B. NICLAS and H. THIENEL, Ulm, W. Germany. Investigations on very-low-noise travelling-wave tubes (with 6 illustrations)	458
3. N.W.W. SMITH, SALFORDS, England. The reduction of noise temperature in electron beams	463
4. L. SOLYMAR, Harlow, England. Non-linear theory of the propagation of signal and noise along an electron beam (with 3 illustrations)	467
5. A.J. FOX and D.T.A. BEAIR, Salfords, England. Noise in backward-wave amplifiers, a large QC theory and a proposed experiment for the measurement of noise parameter using a moving-gun technique (with 4 illustrations)	471
6. S. BLOOM and B. VURAL, Princeton, N.J., U.S.A. Analysis of the noise spectra of a drifting multivelocitv beam (with 8 illustrations)	475
7. J.R. WHINNERY and M.A. POLLACK, Berkeley, Cal., U.S.A. Artificial high temperature sources for noise studies (with 5 illustrations)	478
8. W.R. CURTICE, Ithaca, N.Y., U.S.A. A method of noise reduction for linear beam microwave devices of medium power (with 6 illustrations)	483

PART	P.
9. H.A. HAUS and J.A. MULLER, Cambridge, Mass., U.S.A. Photon noise (with 4 illustrations)	490
10. W.E. WATERS and J.R. LARGENT, Palo Alto, Cal., U.S.A. On the problem of reducing the noise figure of medium-power travelling-wave amplifiers (with 4 illustrations)	501
11. M. KAMIHARA, Y. UJI and F. KAWASIMA, Tokyo, Japan. Noise in the saturation region of a travelling-wave amplifier (with 15 illustrations)	504
12. J. ARNAUD and C. WENDT, Orsay, France. J. LIND, Burlington, Mass., U.S.A. Noise in a hollow beam injection gun for "O"-type tubes (with 7 illustrations)	510
13. M.A. POLLACK, Berkeley, Cal., U.S.A. Crossed field noise in the low-velocity region (with 9 illustrations)	512
14. Th. van DUZER, Berkeley, Cal., U.S.A. Noise figure calculations and measurement for low-power crossed-field amplifiers (with 5 illustrations)	516
15. B. VALTERSSON, STOCKHOLM, Sweden. A proposed large-signal noise mechanism in crossed-field devices based on quasi- analogous hydrodynamic experiments (with 11 illustrations)	519
K FORMATION AND FOCUSSING OF ELECTRON BEAMS	525
1. J.R. HECHTEL and D.F. BRAUCH, San Carlos, Cal., U.S.A. New numerical methods in electron dynamics (with 10 illustrations)	527
2. E.E. ERICKSON and A.D. SUTHERLAND, Gainesville Flo., U.S.A. Analysis of non-laminar space-charge flow (with 11 illustrations)	533
3. E. SUGATA, M. TERADA and H. HAMADA, Osaka, Japan. Electron trajectory tracer associated with resistance network analogs (with 5 illustrations)	546
4. E.J. TODD, N.B. KRAMER and G.R. BREWER, Malibu, Cal., U.S.A. Design criteria for high-density hollow-beam electron guns (with 11 illustrations)	550
5. M. ARNAUD, Paris, France. Analyseur de densité de courant dans un faisceau électronique (avec 3 illustrations)	555
6. H.H. Atkinson, Harwell, England. Limiting currents and neutralisation of cylindrical electron beams (with 4 illustrations)	559

PART	P.
7. A. REDDISH and G. SMOL, Wembley, England. Crossed-field electron guns with tapered gaps (with 4 illustrations)	562
8. P.T. KIRSTEIN and J. HORNSBY, Geneva, Switzerland. The numerical analysis of curvilinear electrode-systems with an emitting surface (with 7 illustrations)	566
9. D.S. COLBURN, K.J. HARKER and G.S. KINO, Stanford, Cal., U.S.A. New method for the design of high-perveance guns (with 9 illustrations)	572
10. N.J. TAYLOR, Surrey, England. Magnetron injection guns derived from theoretical space-charge flow solutions . . (with 9 illustrations)	583
11. V.W. DRYDEN, Gainesville, Flo., U.S.A. Space-charge flow in spherical coordinates with applications to magnetron-type guns (with 17 illustrations)	587
12. B. ARFIN, San Carlos, Cal., U.S.A. Design of a high-perveance magnetron injection gun and some applications . . . (with 7 illustrations)	595
13. A.W. BECK and H.L. NATRASS, Cambridge, England. An experimental study of magnetron electron guns	599
14. B. MINAKOVIC, Paignton, England. Non-uniformities in a p.p.m. focussing unit (with 10 illustrations)	605
15. (D.A. DUNN, R.P. BORCHI and R.C. MORWOOD, San Carlos, Cal., U.S.A. Axially-symmetric space-charge flow in a decelerating space (with 9 illustrations)	611
16. P.T. KIRSTEIN, Geneva, Switzerland. On the effect of thermal velocities in two-dimensional and axially symmetric beams (with 5 illustrations)	615
17. F.J. NEWLAND, Wembley, England. The use of a staggered meander line in an electrostatically focussed forward-wave amplifier (with 9 illustrations)	620
18. H. SCHNITGER, Darmstadt, Deutschland. Wanderfeldröhren mit einem elektrostatisch in ein Zylinderfeld eingeschlossen Strahl hoher Kompression (mit 8 Abbildungen)	626
19. J.C. TWOMBLY and J.E. LAUER, Boulder, Colorado, U.S.A. A mathematical model which describes the high-perveance instabilities of long drifting electron-beams (with 9 illustrations)	633
20. J.E. ROWE, Ann Arbor, Mich., U.S.A. Efficiency enhancement by phase focussing and collector depression (with 9 illustrations)	640

PART		P.
L	WAVES ON ELECTRON BEAMS	647
1.	H. PÖTZL, Vienna, Austria. Wave types in vortical and irrotational electron beams (with 1 illustration)	649
2.	T. WESSEL-BERG, Stanford, Cal., U.S.A. A thick-beam analysis of transverse wave propagation on electron beams (with 8 illustrations)	657
3.	L.A. MACKENZIE, Ithaca, N.Y., U.S.A. Space-charge waves in finite magnetic fields (with 6 illustrations)	663
4.	G. KING, E.A. ASH and L. SOLYMAR, Harlow, England. Expirimental investigation of non-linear phenomena in electron beams at funda- mental and harmonic frequencies (with 13 illustrations)	668
5.	A.S. GILMOUR Jr., G.S. DALMAND and L.F. EASTMAN, Ithaca, N.Y., U.S.A. The current and velocity distributions in a velocity-modulated Brillouin-focussed electron-beam (with 28 illustrations)	675
6.	Z.S. CHERNOV and G.A. BERNASHEVSKY Propagation of space-charge waves and electron bunching in rotating electron- flows focused by centrifugal-electrostatic method (with 15 illustrations)	688
M	SLOW-WAVE STRUCTURES	699
1.	R.M. BEVENSEE, Berkeley, Cal., U.S.A. Aspects of slow-wave structure systems	701
2.	R. LIEBSCHER und E. MAYERHOFER, München, Deutschland. Über eine wendelförmige Verzögerungsleitung für Wanderfeldröhren hoher Leistung (mit 4 Abbildungen)	705
3.	A.L. ELDREDGE, G.A. LOEW and R.B. NEAL, Stanford, Cal., U.S.A. Design and fabrication of a two-mile disk-loaded linear electron accelerator . . . (with 19 illustrations)	706
4.	P. KOOYERS, P.M. HESS and E.K. SHAW, San Carlos, Cal., U.S.A. New types of severed circuits to increase the gain and bandwidth of magnetron amplifiers (with 23 illustrations)	719
N	TECHNOLOGY	727
1.	D.C. BUCK, Elmira N.Y., U.S.A. Development of miniaturized travelling-wave tubes (with 14 illustrations)	729
2.	G. CONVERT, YEOU TA and P. MOUTOU, Orsay, France. The generation of submillimeterwaves (with 9 illustrations)	739

PART		P.
3.	P. DUMON, Orsay, France. Problèmes métallurgiques dans la technique de tubes hyper-fréquences (avec 12 illustrations)	745
4.	G. BOUCHER, Orsay, France. Dissipation calorifique dans les tubes en impulsions (avec 7 illustrations)	749
5.	W.R. DAY Jr., Gainesville, Flo., U.S.A. Dielectric tuning of klystron cavaties (with 5 illustrations)	753
6.	R.M. WHITE, Palo Alto, Cal., U.S.A. Acoustic detection of electron impact in electron tubes (with 4 illustrations)	757
7.	M.J. SMITH, Hayes, England. Mechnism in high-power windows (with 8 illustrations)	759
8.	P.H. CROSS, Harlow, England. A new design of a high-power ceramic window (with 8 illustrations)	763
9.	H. AHMED and A.W.W. BECK, Cambridge, England. Scanning electron microscope studies of thermionic emission from dispenser cathodes (with 6 illustrations)	766
10.	H. AHMED and A.H.W. BECK, Cambridge, England. The series resistance and emission from several types of dispenser cathodes . . . (with 8 illustrations)	771
11.	J.P. FREYTAG, Orsay, France. Cathodes thermoélectriques pour tubes hyperfréquences (avec 16 illustrations)	775
12.	H. HUBER, R. LA BIHAN et J. BENSIMAN, Orsay, France. Cathode à grande densité de courant sous forme d'un capillaire chaud à ionisation de surface (avec 13 illustrations)	783
13.	W.M. FEIST and G. WADE, Burlington, Mass., U.S.A. Novel approaches to low-noise beam generation (with 6 illustrations)	788
14.	H. WEILL, Orsay, France. L'usinage par électroérosion appliqué à la réalisation des tubes hyperfréquences (avec 11 illustrations)	792
15.	A.M..SHROFF, Orsay, France. Sur quelques travaux concernant les sources froides d'électrons (avec 11 illustrations)	798
16.	F.M. CHARBONNIER, J.P. BARBOUR, L.F. GARNETT and W.P. DYKE, McMinnville, Oregon, U.S.A. Basic and applied studies of field emission at microwave frequencies (with 11 illustrations)	803
