Editors' Preface to Macmillan Studies in Economics

The rapid growth of academic literature in the field of economics has posed serious problems for both students and teachers of the subject. The latter find it difficult to keep pace with more than a few areas of their subject, so that an inevitable trend towards specialism emerges. The student quickly loses perspective as the maze of theories and models grows and the discipline accommodates an increasing amount of quantitative techniques.

'Macmillan Studies in Economics' is a new series which sets out to provide the student with short, reasonably critical surveys of the developments within the various specialist areas of theoretical and applied economics. At the same time, the studies aim to form an integrated series so that, seen as a whole, they supply a balanced overview of the subject of economics. The emphasis in each study is upon recent work, but each topic will generally be placed in a historical context so that the reader may see the logical development of thought through time. Selected bibliographies are provided to guide readers to more extensive works. Each study aims at a brief treatment of the salient problems in order to avoid clouding the issues in detailed argument. None the less, the texts are largely self-contained, and presume only that the student has some knowledge of elementary micro-economics and macro-economics.

Mathematical exposition has been adopted only where necessary. Some recent developments in economics are not readily comprehensible without some mathematics and statistics and quantitative approaches also serve to shorten what would otherwise be lengthy and involved arguments. Where authors have found it necessary to introduce mathematical techniques, these techniques have been kept to a minimum. The emphasis is upon the economics, and not upon the quantitative methods. Later studies in the series will provide analyses of the links between quantitative methods, in particular econometrics, and economic analysis.

MACMILLAN STUDIES IN ECONOMICS

General Editors: D. C. ROWAN and G. R. FISHER

Executive Editor: D. W. PEARCE

I should like to thank Nitin Desai of Bombay, India; Maurice Townsend of Southampton and Coleraine; David Rowan of Southampton; George McKenzie of Southampton and Washington, and Bob Nobay of Southampton for detailed comments on an earlier draft of the manuscript. The errors that remain are, of course, my own responsibility.
