Editors' Preface to Macmillan Studies in Economics

The rapid growth of academic literature in the field of economics has posed serious problems for both students and teachers of the subject. The latter find it difficult to keep pace with more than a few areas of their subject so that an inevitable trend towards specialism emerges. The student quickly loses perspective as the maze of theories and models grows and the discipline accommodates an increasing amount of quantitative techniques.

'Macmillan Studies in Economics' is a new series which sets out to provide the student with short, reasonably critical surveys of the developments within the various specialist areas of theoretical and applied economics. At the same time, the studies aim to form an integrated series so that, seen as a whole, they supply a balanced overview of the subject of economics. The emphasis in each study is upon recent work, but each topic will generally be placed in a historical context so that the reader may see the logical development of thought through time. Selected bibliographies are provided to guide readers to more extensive works. Each study aims at a brief treatment of the salient problems in order to avoid clouding the issues in detailed argument. Nonetheless, the texts are largely self-contained, and presume only that the student has some knowledge of elementary micro-economics and macro-economics.

Mathematical exposition has been adopted only where necessary. Some recent developments in economics are not readily comprehensible without some mathematics and statistics and quantitative approaches also serve to shorten what would otherwise be lengthy and involved arguments. Where authors have found it necessary to introduce mathematical techniques, these techniques have been kept to a minimum. The emphasis is upon the economics, and not upon the quantitative methods. Later studies in the series will provide analyses of the links between quantitative methods, in particular econometrics, and economic analysis.

MACMILLAN STUDIES IN ECONOMICS

General Editors: D. C. ROWAN and G. R. FISHER

Executive Editor: D. W. PEARCE

Published

John Burton: WAGE INFLATION
Miles Fleming: MONETARY THEORY

To Marjorie

The paperback edition of this book is sold subject to the condition that it shall not, by way of trade or otherwise, be lent, re-sold, hired out, or otherwise circulated without the publisher's prior consent in any form of binding or cover other than that in which it is published and without a similar condition including this condition being imposed on the subsequent purchaser.

Contents

	<i>Acknowledgements</i>	6
1	Introduction	7
2	The Social Welfare Function	13
3	Neo-classical Economics and the Case for Antitrust	18
4	The Impact of Scale Economies	20
5	The Relevance of X-Inefficiency	25
6	Invention and Innovation	33
7	Some Orders of Magnitude	44
8	The Evidence	47
	Allocative inefficiency	47
	Scale economies	49
	X-inefficiency	53
	Innovation	55
9	Some Theoretical Complications	58
	Intermediate market models	58
	Advertising and sales promotion	60
	Alternative company objectives	62
	Uncertainty considerations	64
	Externalities	65
10	Alternative Views on Social Welfare	67
	A liberalist social welfare function	67
	A technocrat's social welfare function	70
	A totalitarian's social welfare function	71
11	Alternative Approaches to the Problem of Market Power	72
	<i>Laissez-faire</i>	72
	Fair-rate-of-return regulation	76
	Cost-benefit analysis	79
	Non-discretionary antitrust	83
	<i>Bibliography</i>	91

Acknowledgements

I am particularly grateful to my former colleague Michael A. Crew, with whom I have collaborated closely in recent years and who has done so much to help shape my views on antitrust economics. I must also thank Michael Jones-Lee and Alan T. Peacock, who have written with me on topics appertaining to this study. Most especially, however, I wish to thank my wife Marjorie, without whose persistent encouragement and infectious enthusiasm this book would never have been completed.

C.K.R.
