Editors' Preface to Macmillan Studies in Economics

The rapid growth of academic literature in the field of economics has posed serious problems for both students and teachers of the subject. The latter find it difficult to keep pace with more than a few areas of the subject so that an inevitable trend towards specialism emerges. The student quickly loses perspective as the maze of theories and models grows, particularly at a time when so much reappraisal of the established paradigms is taking place.

The aim of the 'Macmillan Studies in Economics' is to offer students, and perhaps some teachers as well, short, reasonably critical overviews of developments in selected areas of economics, particularly those in which current controversies are to be found. As far as possible the titles have been selected to form an integrated whole, although inevitably entire areas have been neglected as being unsuited to the style, format and length of the titles in the series.

In some cases the volumes are rather more like essays than surveys. In most cases, however, the aim is to survey the salient literature in a critical fashion. The level of understanding required to read the volumes varies with the complexity of the subject, but they have been generally written to suit the second- and third-year undergraduate seeking to place his reading of the detailed literature in an over-all context. They are *not* textbooks. Instead they seek to give the kind of perspective that might well be lost by reading longer textbooks on their own, or by reading articles in journals. In particular, they should be most suited to pre-examination revision periods. They are not intended to substitute for the essential reading and assimilation of the original works that they seek to survey and assess.

MACMILLAN STUDIES IN ECONOMICS

1 INTRODUCTION	9
2 G.N.P. VERSUS ENVIRONMENTAL SERVICES	13
Gross National Product	13
Environmental Services	15
Public goods and externalities	16
Market failure and G.N.P.	17
The static conflict	18
A comparative static model	20
Numerical applications	22
3 INTERTEMPORAL CHOICE	25
Present and future consumption	25
Introducing environmental issues	27
An externalities approach	28
A generalised measure of consumption	29
A 2 (goods) $\times$ 2 (time periods) model	33
4 RESOURCE DEPLETION	36
Types of resources	37
Limits to growth: a renewable resource	37
Limits to growth: a non-renewable resource	39
Increasing resource productivity	41
Optimal resource use	46
The incentives to conservation	49
Common resources, externalities and E-goods	52
5 POLICIES FOR ENVIRONMENTAL PROTECTION	55
The orthodox analysis	55
Some criticisms	59
The zero-growth school	61

6	DISTRIBUTION	64
	Growth and the distribution of M-goods	64
	The distribution of E-goods	67
	Environmental standards and the Third World	76
	Intergenerational equity	78
	APPENDIX. ALTERNATIVES TO G.N.P.	80
	An improved measure of welfare	80
	An alternative measure of socio-economic development	86
	<i>Bibliography</i>	89

Acknowledgements

Warm thanks are due to David Pearce of the University of Leicester and Michael Common of the University of Southampton for valuable comments on an earlier draft, to Marjorie Lunt for struggling so patiently with my appalling handwriting, and to my wife for help, sympathy and encouragement throughout.
