This book is sold subject to the standard conditions of the Net Book Agreement.

This paperback edition is sold subject to the condition that it shall not, by way or trade or otherwise, be lent, re-sold, hired out, or otherwise circulated without the publisher's prior consent in any form of binding or cover other than that in which it is published and without a similar condition including this condition being imposed on the subsequent purchaser.

CONTENTS

Preface	XI
1. SIGNAL ANALYSIS AND SYSTEM RESPONSE	1
1.1 Theory Summary	1
1. Introduction	1
2. Fourier Series : Frequency Spectra of Periodic Signals	1
(a) Real form of the Fourier series	
(b) Exponential or complex form of the Fourier series	
(c) Normalized power of a periodic signal: Parseval's theorem	
3. Fourier Transforms: Frequency Spectra of Aperiodic Signals	4
(a) Development of Fourier transform from Fourier series	
(b) Normalized energy of a non-periodic signal: Rayleigh's theorem	
4. The Determination of System Response using Fourier Transforms	6
5. Cross- and Auto-correlation of Signals	8
(a) Cross-correlation	
(b) Auto-correlation	
1.2 Worked Problems	10
1.3 Exercise Problems	19
2. NOISE	25
2.1 Theory Summary	25
1. Thermal Noise	25
2. Shot Noise	25
3. Available Signal and Noise Powers	25

4. Available Power Gain and Equivalent Noise Bandwidth	26
5. Noise Temperatures	27
(a) Standard ambient temperature, T_0	
(b) Effective noise temperature of a source, T_S	
6. Noise Factor or Figure	28
7. Noise Factor and Temperature of Cascaded Networks	29
2.2 Worked Problems	30
2.3 Exercise Problems	34
3. AMPLITUDE AND ANGLE MODULATION SYSTEMS	38
3.1 Theory Summary	38
1. Amplitude Modulation	38
(a) Double sideband amplitude modulation	
(b) Suppressed carrier and single sideband modulation	
2. Angle (Frequency and Phase) Modulation	40
(a) Frequency and phase modulated waves	
(b) Bandwidth of an f.m. wave	
3. Frequency Division Multiplexing	42
3.2 Worked Problems	43
3.3 Exercise Problems	51
4. PULSE AND PCM MODULATION	60
4.1 Theory Summary	60
1. Pulse Amplitude and Pulse Time Modulation	60
(a) Pulse amplitude modulation (PAM)	
(b) Pulse time modulation (PTM)	
2. Sampling and Recovery Theorems	61
(a) Sampling theorem 1	
(b) Sampling theorem 2	

3. Pulse Code Modulation	62
(a) Quantization	
(b) Companding	
(c) Coding and decoding	
4. Time Division Multiplexing (TDM)	64
4.2 Worked Problems	65
4.3 Exercise Problems	73
5. TRANSMISSION LINES AND WAVEGUIDES	79
5.1 Theory Summary	79
1. Transmission Line Equations	79
2. Steady State Solutions	80
3. Parameters of Terminated Lines	82
(a) Reflection coefficient	
(b) Input impedance	
(c) Standing waves and voltage standing wave ratio	
4. Field Solutions for Coaxial Lines and Waveguides	88
(a) Coaxial lines	
(b) Parallel plate stripline	
(c) Rectangular waveguides	
(d) Circular waveguides	
5.2 Worked Problems	92
5.3 Exercise Problems	99
6. ANTENNAS	107
6.1 Theory Summary	107
1. Antenna Parameters	107
(a) Power gain, G , and directive gain, G_D	

(b) Radiation pattern	
(c) Beam-width and side-lobes	
(d) Radiation resistance, R_r	
(e) Effective aperture, A_e	
(f) Effective length, l_e , of a linear antenna	
2. Power Density, Radiated and Received Powers	109
(a) Power density of an electromagnetic wave: Poynting's theorem	
(b) The total power radiated by an antenna, P_T	
(c) The total power received by an antenna	
3. Antenna Arrays	110
(a) Radiation pattern of an n-element, equally spaced, linear array	
(b) Beam steering	
4. Aperture Illumination and Far-field Patterns	112
6.2 Worked Problems	114
6.3 Exercise Problems	121
7. SHORT WAVE, MICROWAVE AND RADAR SYSTEMS	128
7.1 Theory Summary	128
1. Propagation via the Ionosphere	128
(a) The system	
(b) Refractive index	
(c) Critical and maximum useable frequencies for a given ionospheric layer	
(d) Maximum range	
2. Line of Sight and Microwave Communication Systems	129
(a) Power transmitted over a free space line-of-sight link	

(b) Interference between direct and reflected waves	
(c) Block diagram of a microwave radio link	
(d) Signal-to-noise ratio at receiver	
3. Radar Systems	131
(a) Free space radar equation	
(b) Block diagram of a pulse radar system	
(c) Frequency modulated, continuous wave (f.m. - c.w.) radar	
(d) Doppler radar	
(e) Measurement of range and velocity using triangular f.m. - c.w. radar	
7.2 Worked Problems	136
7.3 Exercise Problems	143
ANSWERS	149
APPENDICES	173
A.1 Trigonometric Identities	173
A.2 Fourier Series	173
(a) Expansions for some useful functions	
(b) Series for signals with symmetry	
A.3 Fourier Transforms	175
(a) Properties	
(b) Table of transform pairs	
A.4 Table of sinc and Si Functions	177
A.5 Bessel Functions	177
(a) Values of $J_n(x)$ for $n = 0$ to 6	
(b) Zeros of $J_n(x)$ and $J_n'(x)$	
(c) Series approximations for $J_n(x)$	

PREFACE

This book has been designed to provide students, who are following courses in Electronics, with summarized theory notes, worked examples and exercise problems in the important field of Electrical Communications.

Each chapter is divided into three basic sections :

1. The first section gives a brief review of the relevant theory and summarizes the important results.
2. The second section contains fully worked examples.
3. The third section consists of problems, to which answers are given at the back of the book.

The contents of the book have been chosen to cover the majority of communications topics normally met by students in University, Diploma, Higher National Certificate or equivalent courses of study.
