Contents

<i>Preface</i>	vii
1 LCR circuits	1
1.1 Direct current circuits	1
1.2 Alternating current circuits	8
1.3 Phasors	9
1.4 Resistance, reactance and impedance	15
1.5 Low-pass and high-pass circuits	18
1.6 Impedance diagrams	18
1.7 LCR series circuits	20
1.8 Series resonance	22
1.9 LCR parallel circuits	26
1.10 Parallel resonance	27
2 Transformers	30
2.1 Transformer construction	30
2.2 The ideal transformer	33
2.3 Impedance matching	36
2.4 Transformer losses and efficiency	39
3 Semiconductor diodes and applications	42
3.1 Semiconductor diodes	42
3.2 Semiconductor diode applications	47
3.3 Regulation	51
3.4 Clipping, clamping and restoration	52
3.5 AM detectors	55
3.6 Diode protection	56
4 Transistors and other semiconductor devices	57
4.1 Transistors	57
4.2 Switching devices	61
4.3 Photoelectric devices	62
4.4 Integrated circuits	63

5	Voltage amplifiers	66
5.1	Basic principles: modes of operation	66
5.2	Transistor parameters	69
5.3	Load lines	70
5.4	Biasing	73
5.5	Coupling in multistage amplifiers	77
5.6	Gain–frequency curves: bandwidth	79
5.7	Feedback	81
5.8	Small-signal audio amplifiers	85
5.9	Audio power amplifiers	86
5.10	Bandwidth of power amplifiers	91
6	Waveform generation and shaping	92
6.1	<i>LC</i> feedback oscillators	92
6.2	<i>RC</i> feedback oscillators	96
6.3	Crystal-controlled oscillators	96
6.4	Relaxation oscillators	98
6.5	The bistable multivibrator	100
6.6	The monostable multivibrator	102
6.7	Waveform shaping	103
7	The cathode-ray tube and simple mechanisms	107
7.1	The cathode-ray tube	107
7.2	Simple mechanisms	111
8	Power supplies	115
8.1	Smoothing and filter circuits	116
8.2	Stabilisation	118
8.3	Voltage multiplication	120
	<i>Appendix 1: Transistor Parameters</i>	124
	<i>Appendix 2: Decibels</i>	128
	<i>Appendix 3: Resistor colour code and schematic diagram code BS 1852</i>	131
	<i>Appendix 4: Multiple and submultiple units</i>	133
	<i>Self-test questions and answers</i>	134
	<i>Index</i>	140

Preface

This book covers the syllabus of the Part II Core Studies subject of the City and Guilds of London Institute Course 224 Electronics Servicing and follows on from the book *Electronics Servicing: Radio, Television and Electronics Theory*, by the same author.

As with the first book the approach to theory is strictly non-mathematical, and physical explanations have been used throughout. The layout of content follows a logical teaching order, the basic principles of components and devices being covered prior to the presentation of actual circuits. The book concludes with a number of self-test questions of the kind used by the C.G.L.I. in examinations for this course.

In conclusion, I would particularly like to thank my wife Dawn for all her hard work in typing the manuscript and for her invaluable assistance in preparing it for publication.
