Psychology for Professional Groups

Psychology for Occupational Therapists

Psychology for Professional Groups

Series Editors: Antony J. Chapman and Anthony Gale

Psychology for Professional Groups is a new series of major textbooks published with the British Psychological Society. Each is edited by a teacher with expertise in the application of psychology to professional practice and covers the key topics in the training syllabus. The editors have drawn upon a series of specially commissioned topic chapters prepared by leading psychologists and have set them within the context of their various professions. A tutor manual is available for each text and includes practical exercises and projects, further reading and general guidance for the tutor. Each textbook shows in a fresh, original and authoritative way how psychology may be applied in a variety of professional settings, and how practitioners may improve their skills and gain a deeper understanding of themselves. There is also a general tutorial text incorporating the complete set of specialist chapters and their associated teaching materials.

Other titles:

Psychology and Management. Cary L. Cooper
Psychology for Social Workers. Martin Herbert
Psychology for Teachers. David Fontana
Psychology and Medicine. David Griffiths
Psychology for Physiotherapists. E. N. Dunkin
Psychology for Careers Counselling. Ruth Holdsworth

The occupational therapist as psychological therapist

Chapter 17
319 Counselling and helping

Chapter 18
348 Creating change

Chapter 19
367 The theory and practice of psychotherapy

379 Index

Foreword

This book is one of a series, the principal aims of which are to illustrate how psychology can be applied in particular professional contexts, how it can improve the skills of practitioners, and how it can increase the practitioners' and students' understanding of themselves.

Psychology is taught to many groups of students and is now integrated within prescribed syllabuses for an increasing number of professions. The existing texts which teachers have been obliged to recommend are typically designed for broad and disparate purposes, and consequently they fail to reflect the special needs of students in professional training. The starting point for the series was the systematic distillation of views expressed in professional journals by those psychologists whose teaching specialisms relate to the applications of psychology. It soon became apparent that many fundamental topics were common to a number of syllabuses and courses; yet in general introductory textbooks these topics tend to be embedded amongst much superfluous material. Therefore, from within the British Psychological Society, we invited experienced teachers and authorities in their field to write review chapters on key topics. Forty-seven chapters covering 23 topics were then available for selection by the series' Volume Editors. The Volume Editors are also psychologists and they have had many years of involvement with their respective professions. In preparing their books, they have consulted formally with colleagues in those professions. Each of their books has its own combination of the specially-prepared chapters, set in the context of the specific professional practice.

Because psychology is only one component of the various training curricula, and because students generally have limited access to learned journals and specialist texts, our contributors to the series have restricted their use of references, while at the same time providing short lists of annotated readings. In addition, they have provided review questions to help students organize their learning and prepare for examinations. Further teaching materials, in the form of additional references, projects, exercises and class notes, are available in Tutor Manuals prepared for each book. A comprehensive tutorial text ('Psychology and People'), prepared by the Series Editors, combines in a

single volume all the key topics, together with their associated teaching materials.

It is intended that new titles will be added to the series and that existing titles will be revised in the light of changing requirements. Evaluative and constructive comments, bearing on any aspect of the series, are most welcome and should be addressed to us at the BPS in Leicester.

In devising and developing the series we have had the good fortune to benefit from the advice and support of Dr Halla Beloff, Professor Philip Levy, Mr Allan Sakne and Mr John Winckler. A great burden has been borne by Mrs Gail Sheffield, who with skill, tact and courtesy, has managed the production of the series: to her and her colleagues at the BPS headquarters and at the Macmillan Press, we express our thanks.
