Introduction	1
1 Principles of Heat	5
Nature of heat	5
Heat transfer	15
Gases and vapours	18
Exercises	22
2 Thermal Insulation	23
Insulating materials	23
U -values	27
Structural temperatures	38
Exercises	40
3 Thermal Environment	43
Thermal comfort	43
Heat losses	48
Heat gains	53
Energy consumption	57
Exercises	64
4 Humidity, Condensation, Refrigeration	66
Humidity	66
Condensation in buildings	75
Condensation conditions	79
Refrigerators and heat pumps	86
Exercises	90
5 Principles of Light	92
Electromagnetic radiation	92
Nature of vision	94
Measurement of lighting	97
Colour	107
Exercises	111

6 Artificial Lighting	112
Lamps	112
Luminaires	117
Lighting design	121
Exercises	127
7 Natural Lighting	128
Natural light sources	128
Daylight factors	131
Combined lighting	138
Exercises	140
8 Principles of Sound	141
Nature of sound	141
Sound levels	146
Attenuation of sound	153
Nature of hearing	157
Exercises	160
9 Noise	162
Measurement of noise	162
Noise control	168
Sound insulation	170
Exercises	181

Preface

This book studies the science of those services that contribute to the environment which exists in and around buildings. The main topics are heating, lighting and sound in buildings; and the supply of electricity and water to buildings. Although some subjects have to be introduced separately the text emphasises the necessity of an integrated approach to the study and design of environmental services.

The book is intended for students of building, civil engineering and surveying who are studying environmental science. The requirements of courses for degrees, for examinations of professional institutions, and for Technician Education Council awards should be satisfied by the contents of the book. It will also serve as a useful reference book for those in professional practice and for anyone interested in a knowledge of environmental science.

The motivation for the book stems from continuing teaching experience with many students and information is presented in a manner that has been found popular and successful. Topics are developed from basic principles and assume the minimum prior knowledge of science and mathematics. Important facts and formulae are highlighted in the text as an aid to reference and to memory. Definitions and units are introduced in a consistent form using recommended units and, where a numerical approach is relevant, worked examples are displayed step-by-step and supported by exercises for practice. The style of writing has been kept simple but, at the same time, it has a technical content and accuracy appropriate to this level of study. The text is illustrated by labelled drawings which are intended to help explain the text and to act as models for student sketches.

I wish to thank my colleagues and students who contributed, consciously or otherwise, to the book, and to give special thanks to Mrs A. McMullan who typed so much at such a distance.

R. McMULLAN
