8 Rethinking Psychometric Measurement	127
9 The Real Problem of Test Bias	147
<i>References</i>	164
<i>Index</i>	171

Acknowledgements

The problems discussed in this book have occupied my thoughts for some years and those I should most like to acknowledge as having had the greatest influence on my work are known to me only through their writing. It certainly seems proper to mention Karl Berka, whose work on the theory of measurement is quoted extensively in Chapter 8. My more general philosophical debt to Mario Bunge will also be clear

I am particularly grateful to my colleagues in the Massey Education Department who have taken an interest in this work as it has developed. Eric Archer, James Chapman, John Codd and Don McAlpine all read and commented on an earlier draft of *Intelligence and Realism*. Ivan Snook helped to untangle several philosophical knots and encouraged my realist tendencies. James Flynn at the University of Otago has been a penetrating correspondent and I would like to acknowledge his willingness to read the final version.

Chapter 2 draws extensively on an article published in *Interchange* and I acknowledge the permission of The Ontario Institute for Studies in Education to include that material in this volume. Some passages in Chapter 7 are taken from a review published in *The British Journal of Sociology of Education*. The extended debate on testing in the *New Zealand Journal of Educational Studies* was a stimulating exercise. Keith Ballard and Mark Olssen, in particular, have left their mark on this work.
