Macmillan Building and Surveying Series

Series Editor: Ivor H. Seeley

Emeritus Professor, Nottingham Trent University

- Advanced Building Measurement, second edition* Ivor H. Seeley
Advanced Valuation Diane Butler and David Richmond
An Introduction to Building Services Christopher A. Howard
Applied Valuation Diane Butler
Asset Valuation Michael Rayner
Building Economics, third edition Ivor H. Seeley
Building Maintenance, second edition Ivor H. Seeley
Building Maintenance Technology Lee How Son and George C. S. Yuen
Building Procurement Alan E. Turner
Building Quantities Explained, fourth edition Ivor H. Seeley
Building Surveys, Reports and Dilapidations Ivor H. Seeley
Building Technology, fourth edition Ivor H. Seeley
Civil Engineering Contract Administration and Control Ivor H. Seeley
Civil Engineering Quantities, fifth edition Ivor H. Seeley
Civil Engineering Specification, second edition Ivor H. Seeley
Computers and Quantity Surveyors A. J. Smith
Construction Contract Claims Reg Thomas
Contract Planning and Contractual Procedures, third edition B. Cooke
Contract Planning Case Studies B. Cooke
Design-Build Explained D. E. L. Janssens
Development Site Evaluation N. P. Taylor
Environmental Science in Building, third edition R. McMullan
Greener Buildings – Environmental Impact of Property
Stuart Johnson (Editor)
Housing Associations Helen Cope
Housing Management – Changing Practice Christine Davies (Editor)
Information and Technology Applications in Commercial
Property Rosemary Feenan and Tim Dixon (Editors)
Introduction to Valuation D. Richmond
Marketing and Property People Owen Bevan
Principles of Property Investment and Pricing W. D. Fraser
Property Valuation Techniques David Isaac and Terry Steley
Public Works Engineering Ivor H. Seeley
Quality Assurance in Building Alan Griffith
Quantity Surveying Practice Ivor H. Seeley
Recreation Planning and Development Neil Ravenscroft
Small Building Works Management Alan Griffith
Structural Detailing, second edition P. Newton
Urban Land Economics and Public Policy, fourth edition
P. N. Balchin, J. L. Kieve and G. H. Bull
Urban Renewal – Theory and Practice Chris Couch
1980 JCT Standard Form of Building Contract, second edition R.F. Fellows

Series Standing Order

If you would like to receive future titles in this series as they are published, you can make use of our standing order facility. To place a standing order please contact your bookseller or, in case of difficulty, write to us at the address below with your name and address and the name of the series. Please state with which title you wish to begin your standing order. (If you live outside the United Kingdom we may not have the rights for your area, in which case we will forward your order to the publisher concerned.)

Foreword

Heightened concern about the threat of environmental catastrophe has coincided with a downturn in the fortunes of those involved in the property market and the construction industry. There is no doubt that the present over-supply in the market is enabling occupiers to exercise their preferences by choosing the buildings that are both environmentally friendly and cheaper to run. Stuart Johnson's book is therefore not only valuable, pulling together the many environmental threads that relate to property and construction, but timely.

The agents of change are often described as the carrot and the stick but, in its ability to change course, the construction industry is more like a super-tanker than a donkey; its enormous size will make it slow to change direction even when the helm is hard over. Many believe that we will not see environmental concerns leading to action unless a legislative stick is applied to the construction industry. Statutory regulation is important but at the moment it tends to apply only to new buildings. On the other hand, information and a will to take action can affect choices in respect of both new and existing buildings. I hope that this book will provide those who feel like nibbling at the carrot of a better environment with the information they need.

It is a similar wish that has motivated The Royal Institution of Chartered Surveyors to take a keen interest in the subject of the environment by exposing members to issues of current concern and by talking to government on environmental issues affecting property and construction. The aim is to raise interest in the subject and point the direction in which the property profession can meet existing and expected demand for practical and unbiased advice.

There has been much research into the way in which buildings affect our environment. This book lists many of the current references. In bringing together contributions from a wide variety of experts it is my hope that it will enable enlightened self-interest to grow among property professionals.

This book will help those who wish to respond to market requirements, develop their understanding of environmental issues and adapt their services to provide us with, and help us occupy, greener buildings.
