Acknowledgements

We would first like to thank the Trustees of the Nuffield Foundation for giving us a grant under its Social Sciences Small Grants Scheme for both the first and second editions.

Next we would like to thank the 40 or so industrial relations practitioners – mainly union general secretaries and personnel directors of major companies – who agreed to be interviewed by us for the first edition. In bringing the material up to date for the second edition we again interviewed 40 practitioners, half of those we interviewed for the first edition, whom we wish to thank again, and half for the first time, whom we thank. They are all eminent and busy people who willingly devoted their time and who answered our questions with great frankness.

When we were first considering and planning the book we received encouragement and constructive comments from Bill McCarthy, George Bain, Bill Daniel and Pat Lowry, to whom we are most grateful. We are also greatly indebted to Hugh Clegg, William Brown, Pat Lowry and Ian Kessler for reading our draft manuscript of the first edition in its entirety and to Roy Lewis for reading the legal chapters. They all made invaluable and helpful suggestions.

We would also like to thank Anne Stewart, secretary of the HRM Division of the City University Business School, for her hard work, efficiency and good humour in undertaking the administrative and secretarial work involved in the preparation of this book.

Finally, we are both grateful for the support and encouragement of our wives, Irene and Mary.

SID KESSLER
FRED BAYLISS

Note: The authors and publishers are grateful to the following for permission to reproduce tabular copyright material: The National Institute of Economic

and Social Research for tables from its *Review*; Blackwell Publishers for tables from Bain and Price, 'Union Growth in Britain: Retrospect and Prospect', *British Journal of Industrial Relations*, vol. xxi, no. 1, March 1983; Her Majesty's Stationary Office (HMSO) for Central Statistical Office material from issues of *Economic Trends*, Crown copyright; the Confederation of British Industry for the CBI Statement on Employee Involvement. Every effort has been made to trace all the copyright-holders, but if any have been inadvertently overlooked the publishers will be pleased to make the necessary arrangement at the earliest opportunity.

Introduction to the second edition

Since 1979 British industrial relations have been affected by powerful forces of a kind previously unknown in the post-war period. Compared with the previous decades, the 1980s and early 1990s were years of new departures. These were the result of three major influences.

The first was political. During the whole period there was a 'radical' Conservative Government, which by a series of legislative steps, and in other ways, sought to limit the scope of trade union action, set new rules for trade union operations and enhance the role of management.

The second was economic. Unemployment rose to levels previously thought politically intolerable, reaching over 3 million in 1987 and returning to nearly 3 million in 1992. Although unemployment fell in the latter part of the 1980s, prior to a new increase after 1990, parts of the country still had unemployment rates of 10 per cent and more, while in part of the south they came down to near full employment levels. The decline in manufacturing industry was a main reason for the high levels of unemployment but there were other significant changes taking place in the labour market. In particular, there was the continued growth of the private service sector and the increase in the proportion of the labour force which was female and part-time. In addition to labour market changes there were profound product market changes as a result of growing world competition, deregulation and the effects of new technology.

The third was change in management policies. As a result of product market competition and the swing in bargaining power, the initiative was firmly with management, who sought to achieve far greater cost effectiveness than they had in the past. It is against this background that the changes in industrial relations have to be considered.

Moreover, if the changes are to be fully understood, they must also be considered against the background of the traditional system of British industrial relations.

The first edition concentrated on the period from 1979 to 1990, this second edition comes up to mid-1994. There was no break in the continuity of developments between 1991 and 1994 so this edition takes the period 1979 to 1994 as being subject to the same influences throughout. Nevertheless, there have been significant changes since 1990, not least the extensive redundancies in service sectors and in occupations largely unaffected by the unemployment of the 1980s, which have required extensive revision going beyond bringing the statistics up to date. Of particular significance was the re-election of a Conservative Government in 1992 and the emergence of the second major economic recession of the post-war years.

We commence in Chapters 1 and 2 with a description of industrial relations in the early post-war decades. At least until the 1970s industrial relations were conducted against a background of full employment and steady economic growth, even if the latter was eventually seen as inadequate compared with that of our main industrial competitors. The post-war 'consensus' – shattered by Mrs Thatcher – included commitment by all political parties to the maintenance of full employment, the Welfare State and a mixed economy, that is to say an acceptance that the public sector as well as the private sector had a significant role to play. It was also accepted that trade unions had an important and legitimate role in industry and in society as a whole, even if there was a growing belief that the balance of power had swung too strongly in their favour.

In retrospect, industrial relations developments in the early post-war years appear to have been relatively unspectacular. But change was constantly taking place – above all in the growth in certain industries of the power of the shop floor. However, the 1970s saw dramatic events including the re-emergence of major national strikes, the imposition of incomes policies and a determined, but unsuccessful, attempt to change the law. All this took place against an economic background of rapidly rising inflation and a marked slowing down in economic growth – primarily the consequence of the quadrupling of oil prices by OPEC in 1973 and the economic reaction to that event by the leading industrial countries.

If industrial relations developments appeared dramatic in the 1970s, they palled almost into insignificance compared with developments since 1979. We commence our analysis of the period since 1979 with the changing environment. In Chapter 3 we consider the economic background, in Chapter 4 Government values and policies, and in Chapter 5 changes in the law. While we do not devote a separate chapter to technological change, we are conscious of its rapid development and application and reference is made to its important effects in a number of places in the text.

We then move on to consider the parties themselves. Thus Chapter 6 examines management strategies in the private sector, Chapter 7 examines the role of Government as an employer and quasi-employer, while Chapter 8

looks at the trade unions, which have basically been at the receiving end of change and have had to struggle to adapt in adverse circumstances.

Having considered the changing political, economic and legal environment and the changes in employers and unions, we move on to examine the effects of these changes and their implications for the conduct of industrial relations in the future. Thus in Chapter 9 we consider the institutions of industrial relations, in Chapter 10 pay and productivity and in Chapter 11 strikes. Finally, in Chapter 12 we make an assessment of the changes which have taken place, their causes, and we look forward to what are likely to be developments in the future. This is the chapter which differs most from the first edition.

An important part of the preparation of the first edition was the holding of semi-structured interviews on a confidential basis with over forty key industrial relations practitioners; forty were also interviewed for the second edition, half being repeats and half new respondents. They consisted on both occasions on the trade union side of general secretaries and senior officials of most of the major unions and the TUC. On the employers' side they included personnel directors of leading companies in both the manufacturing and services sectors, (including some non-unionised companies), public corporations and former public corporations, and major employers' associations including the CBI. We would in no way claim that this was a scientific sample. But we do believe that we have interviewed most of the key participants in the events since 1979, the overwhelming majority of whom are still leading practitioners.

Our interviews were based on three simple, but major questions. What has happened since 1979? Why did it happen? What are the implications for the future? The answers to these questions are woven into our assessment. The differences of judgement and emphasis in the responses are brought out as well as the areas of agreement. The book is a combination of academic description and analysis with the reporting of the opinions of those who have shaped the years since 1979 and will be in the driving seats for some years to come.
