HUMAN REPRODUCTIVE DECISIONS

THE GALTON INSTITUTE

The Galton Institute is concerned with the interdisciplinary study of the biological, genetic, economic, social and cultural factors relating to human reproduction, development and health in the broadest sense. The Institute has a wide range of interests which include the description and measurement of human qualities, human heredity, the influence of environment and the causes of disease, genetic counselling, the family unit, marriage guidance, birth control, differential fertility, infecundity, artificial insemination, termination of pregnancy, population problems and migration. As a registered charity, the Institute does not propagate particular political views, but it does seek to foster respect for human variety and to encourage circumstances in which the fullest achievement of individual human potential can be realised. More generally, the Institute seeks to advance understanding of biosocial matters by enabling biologists, clinicians, demographers, sociologists and other professionals to work together in a mutually productive manner.

The Galton Institute was formed in 1988 as the successor body to the Eugenics Society, which in turn derived from the Eugenics Education Society founded in 1907 by Sir Francis Galton, FRS. Membership of the Institute is international and consists of fellows and members. Fellows are those who contribute by their work and writings to the advancement of knowledge in the biosocial sciences. Members are drawn from a wide area of biosocial interests. Amongst its activities the Institute supports original research via its Stopes Research Fund, sponsors the annual Darwin Lecture in Human Biology, co-sponsors the biennial Caradog Jones Lecture, and publishes the journal *Biology and Society*. Each year, the Institute mounts a two-day symposium in which a topic of current importance is explored from differing standpoints, and during which the Galton Lecture is delivered by a distinguished guest.

Information about the Institute, its aims, activities and publications may be obtained from: The General Secretary, The Galton Institute, 19 Northfields Prospect, Northfields, London SW18 1FE, England.

Human Reproductive Decisions

Biological and Social Perspectives

**Proceedings of the Thirtieth Annual Symposium
of the Galton Institute, London, 1993**

<i>List of Tables</i>	vii
<i>List of Figures</i>	viii
<i>Notes on the Contributors</i>	xi
1 An Interdisciplinary Approach to Human Fertility R. I. M. Dunbar	1
2 Breastfeeding and the Baby: Natural Contraception Alan S. McNeilly	9
3 Understanding Natural Variation in Human Ovarian Function Peter T. Ellison	22
4 Nutrition, Physical Workloads and Fertility Regulation Lyliane Rosetta	52
5 For Love or Money: the Evolution of Reproductive and Material Motivations Alan R. Rogers	76
6 Fertility and Fitness Among Albuquerque Men: a Competitive Labour Market Theory Hillard S. Kaplan, Jane B. Lancaster, John A. Bock and Sara E. Johnson	96
7 Reproductive Decisions Viewed from an Evolutionarily Informed Historical Demography Eckart Volland	137
8 English Fertility, 1600–1900: Is an Economic Analysis Tenable? P. R. Andrew Hinde	160
9 Stopping, Starting and Spacing: the Regulation of Fertility in Historical Populations John Landers	180

10	Obstacles to Fertility Decline in Developing Countries John Cleland	207
11	Imperatives to Reproduce: Views from North-west England on Fertility in the Light of Infertility Jeanette Edwards	230
12	The Timing of Childbearing in Developed Countries Máire Ní Bhrolcháin	249
13	Low Fertility in a Pastoral Population: Constraints or Choice? Sara Randall	279
	<i>Index</i>	297

List of Tables

3.1	Salivary progesterone levels across seven 5-year age groups in three populations (Boston, Lese, Tamang)	32
6.1	The sample of Albuquerque men by birth cohort	101
6.2	Regression models of number of grandchildren on predictor variables	115
6.3	Reduced regression model of effects of parental investment on income	118
7.1	Measures of average lifetime reproductive success of the 60 wealthiest men of Krummhörn and the contemporary population mean	143
7.2	Mean number of adult children in the local population by female age at marriage and male land ownership	146
9.1	Cumulative age-specific marital fertility per woman	186
9.2	Estimates of mean fecundability in historical populations	189
9.3	Estimates of non-susceptible period	189
9.4	Percentage single by age-group in selected countries around 1900	193
9.5	Persons per 100 households by relationship to head – rural Denmark and rural India	195
9.6	Servants as a percentage of total population by age	196
10.1	Life expectancy at birth and infant mortality at onset of fertility decline	219
12.1	Median age at first birth by birth cohort	259
12.2	Median age at last birth by birth cohort	260
12.3	Parity progression ratios by birth cohort	261
12.4	Median time from first to last birth by birth cohort	263
12.5	Estimates of birth intervals	265
13.1	Marriage indices for Kel Tamasheq and Bambara	282
13.2	Numbers of Bambara and Tamasheq women by marriage category	285
13.3	Progression to motherhood (pp0): <i>iklan</i> and <i>illelan</i>	291

List of Figures

2.1	Components of the interbirth interval	14
3.1	An example profile of salivary oestradiol and progesterone from a single subject aligned on menstrual onset	23
3.2	The continuum of ovarian function	25
3.3	Salivary progesterone profiles for six consecutive cycles for two different individuals	28
3.4	Mean values by age group for four indices of ovarian function from 126 Boston women	30
3.5	Average profiles of salivary oestradiol in 53 Boston women by age group	31
3.6	Best-fit quadratic regressions of mid-luteal salivary progesterone on age in three populations: middle-class Boston women, Lese horticulturalists from Zaïre and Tamang agro-pastoralists from Nepal.	33
3.7	Ovulatory frequency by month among Lese women in 1984, assessed from salivary progesterone profiles	38
3.8	Mean values for ovulatory frequency, days of menstrual flow, weight and cycle length for Lese women by month in 1989	39
3.9	Monthly distributions of conceptions (birth dates minus 9 months) for Lese women between January and August 1987	40
3.10	Average salivary progesterone profiles by season for Tamang women in 1990–1.	42
3.11	Average salivary progesterone profiles for 20 rural Polish farm women categorised by the intensity of their subsistence workloads	43
3.12	Average salivary progesterone profiles for women from four populations: middle-class Boston women, Quechua Indians of highland Bolivia, Lese horticulturalists from Zaïre and Tamang agro-pastoralists from Nepal	45
5.1	An evolutionary equilibrium under clonal inheritance	78
5.2	Number of offspring gained for given investments of wealth	85
5.3	An optimal strategy with $\gamma > 0$	88
5.4	An optimal strategy with $\gamma = 1$	89

List of Figures

ix

5.5	Response of r_{kids} and r_{wealth} to s and β for $\gamma = 0$	91
5.6	Response of r_{kids} and r_{wealth} to s and β for $\gamma = 1$	92
5.7	r_{kids} and r_{wealth} against λ	93
6.1	Direct and indirect effects of fertility on fitness	98
6.2	Factors that influence fertility	100
6.3	Ethnic distribution of men in sample obtaining drivers licenses versus frequencies for Albuquerque SMSA	103
6.4	Completed fertility by 5-year cohort	104
6.5	Age at first birth by 5-year cohort	106
6.6	Reproductive lifespan by 5-year cohort	108
6.7	Frequency distribution of completed fertility for Anglo men	110
6.8	Frequency distribution of completed fertility for Hispanic men	112
6.9	Phenotypic variation in optimum fertility	113
6.10	Children versus grandchildren	116
6.11	Father's children versus ego's children	117
6.12	Completed fertility by income for Anglo men	119
6.13	Completed fertility by income for Hispanic men	122
6.14	The determinants of fitness	126
7.1	Ratio of farmers' fitness to the overall population mean (Krummhörn, marriage cohort, 1720–50)	143
7.2	Mean age for men and women (first marriages only) by land ownership of the men (Krummhörn, 1720–1874)	145
7.3	Mean number of godparents for children surviving or not surviving their first year of life	148
7.4	Male infant mortality by social group and number of living brothers (Krummhörn, 1720–1874)	149
7.5	Female infant mortality by social group and number of living sisters (Krummhörn, 1720–1874)	150
7.6	Infant mortality (first born children only) by sex and social group (Leezen, 1720–1869)	153
7.7	Ratio of sex-typical infant mortality (q_f/q_m) in the upper and lower classes of five north German populations, arranged according to their mean population increase	154
7.8	Trivers/Willard effect (T/W) in five north German populations	155
9.1	Percentage distribution of provinces of Europe by the pre-decline plateau of I_g	185
9.2	Index of proportions married (I_m) in European provinces in 1990	194

10.1	Trends in total fertility: major developing regions, 1960–1990	209
10.2	Scatterplot of Indian states, by level of female literacy and total fertility	211
10.3	Total fertility rate by country, 1990	213
10.4	Rural total fertility rates by educational level of women, selected states of India, 1984	216
12.1	Period mean age at maternity, standardised, European countries, 1951–91	250
12.2	Standard deviation of age at maternity, European countries, 1951–91	251
12.3	Period mean age: all and first births, England and Wales, standardised	252
12.4	Standard deviation of age at all and first births, England and Wales, standardised	253
12.5	Median age at first and last birth, birth cohorts, 1911–48	255
12.6	Median time between first and last birth, birth cohorts, 1911–48	256
12.7	Standard deviation of span of childbearing, birth cohorts, 1911–48	258
12.8	Estimated median second interval, England and Wales and Great Britain, 1910–91	262
12.9	Estimated median third interval, England and Wales and Great Britain, 1910–91	264
13.1	Parity progression ratios	286
13.2	Parity progression ratios by age, marital status and ethnicity	287
13.3	Tamasheq social class PPRs	290
13.4	PPRs for <i>iklan</i> and <i>illelan</i> , widowed and divorced women aged 20–34	291
