Springer Series on

ATOMIC, OPTICAL, AND PLASMA PHYSICS

The Springer Series on Atomic, Optical, and Plasma Physics covers in a comprehensive manner theory and experiment in the entire field of atoms and molecules and their interaction with electromagnetic radiation. Books in the series provide a rich source of new ideas and techniques with wide applications in fields such as chemistry, materials science, astrophysics, surface science, plasma technology, advanced optics, aeronomy, and engineering. Laser physics is a particular connecting theme that has provided much of the continuing impetus for new developments in the field. The purpose of the series is to cover the gap between standard undergraduate textbooks and the research literature with emphasis on the fundamental ideas, methods, techniques, and results in the field.

Please view available titles in *Springer Series on Atomic, Optical, and Plasma Physics* on series homepage <http://www.springer.com/series/411>

Contents

1	Introduction	1
1.1	Ionization of Atomic Gases	1
1.2	Ionization of Hydrogen, Sulphur Dioxide and Sulphur Hexa Fluoride	4
1.3	Excitation of Polarized Sodium and Potassium Atoms	6
1.4	Excitation of Alkaline Earth Metal Atoms of Calcium and Strontium	10
1.4.1	Excitation-Ionization of the Calcium Atom by Electron Impact	11
1.4.2	Measurement of Coherence and Polarization Parameters for the Excitation of the 5^1P State of Strontium	12
1.5	Polarization Correlation Measurements of 3^1P State of Helium	12
1.6	Polarization Correlation Measurements on the 3^3P State of Helium	13
2	Theoretical Approaches	15
2.1	Ionization Cross Sections of Atomic Gases by Electron Impact	15
2.1.1	Double Differential Cross Sections of Ionization	16
2.1.2	First Born Approximation	16
2.1.3	Plane-Wave Born Approximation	17
2.1.4	Binary Encounter Theory	18
2.1.5	The Inner Shell Ionization	19
2.1.6	Electron Vacancy Transitions of Atoms	20
2.1.7	Characteristic and Continuum X-Rays	24
2.1.8	Close-Coupling Approach to Electron-Impact Ionization	24
2.1.9	Partial Double-Differential Cross Section for Ionization	25
2.2	The Ionization of Hydrogen, Sulphur Dioxide and Sulphur Hexafluoride	26
2.3	Excitation of Spin-Polarized Sodium and Potassium Atoms by Electron Impact	28
2.3.1	Preparation of the State-Selected Na and K Atomic Beams	28

2.3.2	The Collision Induced S-P Excitation	30
2.3.3	Fine and Hyperfine Interaction of the Excited States	33
2.3.4	Polarization of the Fluorescence Radiation	34
3	Apparatus for the electron-atom collision studies	37
3.1	Apparatus for the Electron-Atom Collision Studies	37
3.1.1	The Apparatus for Detecting Photons and Atomic Particles ...	37
3.1.2	The Vacuum Chamber for Housing the Apparatus	38
3.1.3	The Electron Gun and the Faraday Cup	40
3.1.4	The Atomic/Molecular Beam Source	41
3.1.5	The Electron Analyzer	41
3.1.6	The Ion Analyzer	43
3.1.7	The Negative Ions	45
3.1.8	High-Voltage Power Supplies, Multi-channel Analyzer and Other Electronic Equipment	47
3.1.9	Hyper Pure Germanium (HPGe) X-Ray Detector	47
3.1.10	Energy Structure of Inner Shells, X-Ray Spectra, Augér Effect and Coster-Kronig Transitions	48
3.1.11	Bremsstrahlung X-Rays	63
3.1.12	Crystal X-Ray Spectrometer	68
3.2	The Apparatus for the Electron-Molecule Collision Process	74
3.2.1	The Apparatus and the Electronic Equipment Used in the Experiment	74
3.3	Apparatus for the Study of the Excitation of Spin-Polarized Atoms of Sodium and Potassium	74
3.3.1	Vacuum Chambers for Housing the Apparatus	74
3.3.2	Cancellation of the Earth's Magnetic Field	75
3.3.3	The Components of the Atomic Beam Apparatus	75
3.3.4	Guiding Fields and the Low Field Polarization of Atoms ...	85
3.3.5	The Rabi Magnet	87
3.3.6	Langmuir-Taylor Detector and the Atomic Beam Density ...	88
3.3.7	The Electron Beam Components	91
3.3.8	Photon Detection System	96
3.4	Apparatus for the Study of Excitation of Calcium	97
3.4.1	The Vacuum System	97
3.4.2	The Atomic Beam Source	98
3.4.3	Atomic Beam Density	100
3.4.4	The Electron Gun	102
3.5	Apparatus for the Study of Excitation of Strontium	102
3.5.1	The Vacuum Chamber	102
3.5.2	The Atomic Beam Source	102
3.5.3	The Atomic Beam Density	103
3.5.4	The Electron Gun	103
3.5.5	The Electron Energy Analyzer	103
3.6	Apparatus for the Study of Excitation of Helium	104

4	Experimental Techniques	107
4.1	Electron-Ion Coincidence Technique for the Investigation of Multiple Ionization of Atomic Gases	107
4.2	X-Ray-Ion Coincidence Technique	110
4.3	Crystal X-Ray Spectrometer	111
4.4	Experimental Technique for the Investigation of the Ionization of the Molecular Gases	113
4.5	Experimental Technique for the Measurement of the Polarization Parameters of the Induced Fluorescent Radiation in Electron-Polarized Atom Collision Process	117
4.6	The Polarization Parameters of the Fluorescent Radiation	118
4.7	The Corrections for the Measurement of the Polarization of the Fluorescence Radiation	119
4.8	Hanle Effect and the Depolarization of the Fluorescent Radiation	121
4.9	Fine and Hyperfine Structure of Sodium and Potassium Atoms	123
4.10	Hanle Effect Depolarization of the Observed States in Sodium and Potassium Atoms	127
4.11	Experimental Techniques for the Investigation of Electron Impact Excitation of Calcium and Strontium Atoms	130
4.11.1	Experimental Technique for the Study of Excitation of Calcium Atoms	130
4.11.2	Experimental Technique for the Excitation of Strontium Atoms	132
4.12	Experimental Technique for the Study of 3^1P State of Helium	135
4.13	Electron Impact Excitation of 3^3P State of Helium	137
5	Results and Discussion	139
5.1	Measurement of the Ionization Cross Sections for Atomic Gases	139
5.1.1	Helium	140
5.1.2	Argon	141
5.1.3	Krypton	151
5.1.4	Xenon	152
5.1.5	Neon	160
5.1.6	X-Ray-Ion Coincidence Measurements	161
5.1.7	X-Ray Spectroscopy Using a Crystal X-Ray Spectrometer	161
5.2	Measurement of the Ionization Cross Sections for Molecular Gases	162
5.2.1	Hydrogen	162
5.2.2	Sulphur Dioxide	168
5.2.3	Sulphur Hexafluoride (SF_6)	181
5.3	Measurements for the Polarization of the Fluorescent Radiation Emitted by Sodium and Potassium Atoms	192
5.3.1	Measurements for the Polarization of the Fluorescent Radiation Emitted by the Sodium Atom	192

- 5.3.2 Measurements for the Polarization of the Fluorescent Radiation Emitted by the Potassium Atom 197
- 5.4 The Excitation of Calcium and Strontium Atoms 200
 - 5.4.1 Excitation Function of Ca II Line of Wavelength $\lambda = 393.3 \text{ nm}$ 200
 - 5.4.2 Absolute Cross Section for the Ca II $4^2P_{1/2}$ State 201
 - 5.4.3 Polarization of the Ca II, $\lambda = 393.3 \text{ nm}$ ($4^2P_{3/2} \rightarrow 4^2S_{1/2}$) Transition 202
 - 5.4.4 The Coherence and Polarization Parameter Measurements for the Excitation the 5^1P State in Strontium 203
- 5.5 Excitation of 3^1P State of Helium 209
- 5.6 Excitation of 3^3P State of Helium 211

- 6 Conclusion** 217

- Bibliography** 221

- Index** 231
