# Preface

The concept of this case based GU Imaging text stems from the daily “interesting case” rounds we have in the Division of Abdominal Imaging at the Massachusetts General Hospital. This interesting case conference provides a platform for showcasing the optimal use of multiple modalities to answer clinical questions posed in the GU realm. This daily routine benefits all cadres of audience including residents, fellows and faculty in the division and has resulted in a multitude of clinical research projects, journal discussions and teaching points. The current text is a cross section of interesting GU cases from this daily conference. The goal of this text is to not only show interesting GU cases but also provide a brief synopsis of the salient teaching points associated with each case that one should consider when one comes across them. We have tried to encompass the common GU clinical entities in these case discussions. We hope the reader will find the text easy to read providing a quick overview of all common areas in the GU system.

In addition to the contributors listed in the acknowledgement section, we would like to especially thank Dr. Jennifer Uyeda for helping us in compiling the cases.
