Preface

This book presents a development of invariant manifold theory for a specific canonical nonlinear wave system – the perturbed nonlinear Schrödinger equation. The main results fall into two parts. The first part is concerned with the persistence and smoothness of locally invariant manifolds. The second part is concerned with fibrations of the stable and unstable manifolds of inflowing and overflowing invariant manifolds. The central technique for proving these results is Hadamard’s graph transform method generalized to an infinite-dimensional setting. However, our setting is somewhat different than other approaches to infinite dimensional invariant manifolds since for conservative wave equations many of the interesting invariant manifolds are infinite dimensional and noncompact. The style of the book is that of providing very detailed proofs of theorems for a specific infinite dimensional dynamical system—the perturbed nonlinear Schrödinger equation.

The book is organized as follows. Chapter one gives an introduction which surveys the state of the art of invariant manifold theory for infinite dimensional dynamical systems. Chapter two develops the general setup for the perturbed nonlinear Schrödinger equation. Chapter three gives the proofs of the main results on persistence and smoothness of invariant manifolds. Chapter four gives the proofs of the main results on persistence and smoothness of fibrations of invariant manifolds.

This book is an outgrowth of our work over the past nine years concerning homoclinic chaos in the perturbed nonlinear Schrödinger equation. The theorems in this book provide key building blocks for much of that work. We would like to acknowledge the guiding role that Dave McLaughlin has played in this work. We would like to thank our wives, Sherry and Meredith, for their support during the production of this work. Finally, we would like to thank Holly Domingo for her expert preparation of the manuscript. This work has benefited from the support of the National Science Foundation and the Office of Naval Research.

Contents

1	Introduction	1
1.1	Invariant Manifolds in Infinite Dimensions	1
1.2	Aims and Scope of This Monograph	9
2	The Perturbed Nonlinear Schrödinger Equation	13
2.1	The Setting for the Perturbed Nonlinear Schrödinger Equation	13
2.2	Spatially Independent Solutions: An Invariant Plane	15
2.3	Statement of the Persistence and Fiber Theorems	17
2.4	Explicit Representations for Invariant Manifolds and Fibers	19
2.5	Coordinates Centered on the Resonance Circle	21
2.5.1	Definition of the \tilde{H} Norms	21
2.5.2	A Neighborhood of the Circle of Fixed Points	22
2.5.3	An Enlarged Phase Space	23
2.5.4	Scales Through δ	23
2.5.5	The Equations in Their Final Setting	24
2.6	($\delta = 0$) Invariant Manifolds and the Introduction of a Bump Function	28
2.6.1	($\delta = 0$) Invariant Manifolds	28
2.6.2	Tangent and Transversal Bundles of M	29
2.6.3	Introduction of a Bump Function	30
2.6.4	Existence, Smoothness, and Growth Rates for the “Bumped” Flow in the Enlarged Phase Space	31
3	Persistent Invariant Manifolds	35
3.1	Statement of the Persistence Theorem and the Strategy of Proof	35
3.2	Proof of the Persistence Theorems	38
3.2.1	Definition of the Graph Transform	38
3.2.2	The Graph Transform as a C^0 Contraction	42
3.3	The Existence of the Invariant Manifolds	51
3.4	Smoothness of the Invariant Manifolds	52
3.5	Completion of the Proof of the Proposition	61

4	Fibrations of the Persistent Invariant Manifolds	63
4.1	Statement of the Fiber Theorem and the Strategy of Proof	64
4.2	Rate Lemmas	65
4.3	The Existence of an Invariant Subbundle E	73
4.4	Smoothness of the Invariant Subbundle E	78
4.5	Existence of Fibers	89
4.6	Smoothness of the Fiber $f^E(Q)$ as a Submanifold	109
4.7	Metric Characterization of the Fibers	117
4.8	Smoothness of Fibers with Respect to the Base Point	124
	References	161
	Index	168
