Preface & Acknowledgements

With the continual interest in developing means of protecting the ischemic and reperfused myocardium, as well as the advent of a particular excitement in the role that the K_{ATP} channel may play in this protection, we the editors, felt that it was both timely and appropriate that a concise, state of the art book, addressing this topic should be written.

A number of the concepts discussed in the following chapters were convened at a round table meeting held at Cliveden, England in 1995 under the auspices of the Cellular Biology Working Group of the European Society of Cardiology. We are grateful to Rhone Poulenc Rorer and Merck Lipha for providing an educational grant to sponsor the round table meeting and to support the publication of this book.

We also sincerely thank the Department of Academic & Clinical Cardiology at University College London and the Department of Pharmacology and Toxicology at the Medical College of Wisconsin for providing the academic environment that has enabled us to pursue our research and educational endeavours. On a more personal note both Derek & Garrett particularly want to express their grateful thanks to Luci and Carol for their continued patience and understanding of our sometimes misguided drive to pursue our indulgence for academic gratification!

Finally our most sincere thanks must go to our distinguished contributors who despite the enormous pressures which are continually placed upon them all made contributions of the highest calibre. All the authors felt that a book addressing this important and highly topical subject should proceed without delay which we are delighted to say has allowed this volume to be published within one year of its conception.

Derek M Yellon
Garrett J Gross
