Chapter 15, <i>Caroline Gerschlager</i> Conclusions	237
Subject Index	243
Author Index	255
About the Authors	261

ACKNOWLEDGEMENTS

The articles in this book were created subsequent to brief presentations at the workshop “On Exchange. Reflections on Expanding the Economic Concept” which was conceptualized and organised by the editor of this book at IFK (*Internationales Forschungszentrum Kulturwissenschaften*) in Vienna in October 1996.

The workshop aimed at crossing the boundaries laid down by economists and was an initial step towards expanding the conceptual scope of economic exchange by focusing on the function played by deceptions, self-deceptions and illusions. This present volume is the result of subsequent discussions between the editor and the authors on the subject matter of this book which engendered processes of revising the original contributions. Many of the contributions were only agreed upon subsequent to the workshop as a direct result of the changes brought about there in the author’s interest in the topic. I am very grateful to the authors of this volume for their patience and for having borne with me and this project. Also, I would like to thank the referees for their helpful comments which have contributed to amending this project.

A great deal of my fascination with interdisciplinary work to which this volume has been dedicated is due to the IFF (Institute for Interdisciplinary Studies of Austrian Universities), and in particular to the members of the research group “Alternative Modellbildung in der Ökonomie” which I had the good fortune to join as a member and which accompanied my thinking for several years. I am especially thankful to Luise Gubitzer, Peter Heintel and Erich Kitzmüller, who founded and worked with this group, for their assistance and support in various ways. I have also benefited from support from Leonhard Bauer and Hanns J. Pichler from the Vienna University of Economics and Business Administration (WU Wien) and from André Gingrich from the Vienna University.

I am greatly indebted to Maurice Aymard at MSH (Fondation de la Maison des Sciences de l’Homme) for his support and Jean-Pierre Dupuy who invited me to CREA, École Polytechnique. I am very grateful to Roberte N. Hamayon for her unflinching verve and generosity.

Finally, this work would never have been possible without the financial support of the Erwin Schrödinger Forschungsstipendium at FWF [Austrian Funds for the Promotion of Scientific Research] which allowed me to pursue my research project in Paris and The Austrian Ministry of Science (BM:BWK).

The Editor
