ELECTRICAL AND OPTICAL PROPERTIES OF SEMICONDUCTORS

ELEKTRICHESKIE I OPTICHESKIE SVOISTVA POLUPROVODNIKOV

ЭЛЕКТРИЧЕСКИЕ И ОПТИЧЕСКИЕ СВОЙСТВА ПОЛУПРОВОДНИКОВ

The Lebedev Physics Institute Series

Editor: Academician D. V. Skobel'tsyn

Director, P. N. Lebedev Physics Institute, Academy of Sciences of the USSR

Volume 25	Optical Methods of Investigating Solid Bodies
Volume 26	Cosmic Rays
Volume 27	Research in Molecular Spectroscopy
Volume 28	Radio Telescopes
Volume 29	Quantum Field Theory and Hydrodynamics
Volume 30	Physical Optics
Volume 31	Quantum Electronics in Lasers and Masers
Volume 33	Studies of Nuclear Reactions
Volume 34	Photomesic and Photonuclear Processes
Volume 36	Photodisintegration of Nuclei in the Giant Resonance Region
Volume 37	Electrical and Optical Properties of Semiconductors

In preparation:

Volume 32	Plasma Physics
Volume 35	Electronic and Vibrational Spectra of Molecules

Proceedings (Trudy) of the P. N. Lebedev Physics Institute

Volume 37

ELECTRICAL AND OPTICAL PROPERTIES OF SEMICONDUCTORS

Edited by

Academician D. V. Skobel'tsyn

*Director, P. N. Lebedev Physics Institute
Academy of Sciences of the USSR, Moscow*

Translated from Russian by

Albin Tybulewicz

Editor, "Soviet Physics—Semiconductors"

CONSULTANTS BUREAU
NEW YORK

1968

The original Russian text, published by Nauka Press in Moscow in 1966 for the Academy of Sciences of the USSR as Volume XXXVII of the Proceedings (Trudy) of the P. N. Lebedev Physics Institute, has been corrected by the editor for this edition.

**Электрические и оптические свойства
полупроводников**

*Труды Физического института
и.и. П. Н. Лебедева*

Том XXXVII

Library of Congress Catalog Card Number 68-18561

CONTENTS

Radiative Recombination at Dislocations in Germanium	
A. A. Gippius	1
Introduction	1
1. Potentialities of Radiative Recombination as a Method of Investigation	1
2. Energy Structure of Dislocations in Germanium Crystals.	3
Chapter I. Experimental Method	5
1. Preparation of Crystals with High Dislocation Densities	5
2. Preparation of Samples.	9
3. Apparatus for Measuring Recombination Radiation Spectra	9
Chapter II. Radiative Recombination in Germanium Crystals with Dislocation Densities of 10^3 - 10^4 cm ⁻²	14
1. Dependence of the Dislocation Band Profile on the Degree of Doping	14
2. Dependence of the Dislocation Band Profile on the Nonequilibrium Carrier Density	16
3. Dependence of the Dislocation Band Intensity on the Injection Current	16
Chapter III. Radiative Recombination in Germanium Crystals with High (10^5 - 10^6 cm ⁻²) Dislocation Densities. Radiative Recombination Mechanism.	18
1. Dependence of the Form of the Spectrum on the Position of the Fermi Level and on the Injection Current	18
2. Analysis of the Radiation Band Profile	19
3. Temperature Dependence of the Radiation Band Width. Mechanism of Radiative Recombination at Dislocations.	20
4. Interpretation of Experimental Results by Means of Intra-Center Transitions.	21
Chapter IV. Determination of the Quantum Yield of the Recombination Radiation Associated with Dislocations.	27
Conclusions	30
Literature Cited	31
Impact Ionization of Impurities in Germanium at Low Temperatures	
É. I. Zavaritskaya	33
Introduction	33
Chapter I. Impact Ionization (Review).	34
1. Impact Ionization in Rarefied Gases and in Semiconducting p-n Junctions.	34
2. Impact Ionization in Homogeneous Semiconductors	36
3. Impact Ionization of Neutral Impurity Atoms	38
Chapter II. Experimental Technique.	39
1. Production of Temperatures Between 0.1 and 290°K	39
2. Measurement of Temperatures Between 0.1 and 290°K.	41
3. Apparatus	42

4. The Preparation of the Samples and Contacts	43
5. Thermal Contact between a Sample and the Liquid Helium	43
Chapter III. Results of Measurements and Discussion.	45
Electrical Conductivity of Germanium in Fields Less than the Breakdown Value.	47
1. Weak Electric Fields (Region A).	47
2. Prebreakdown Fields (Region B).	53
Chapter IV. Breakdown	56
1. Results of Measurements.	56
2. Breakdown Mechanism.	56
3. Noise.	59
Chapter V. Influence of a Magnetic Field on the Electrical Conductivity of Germanium in Prebreakdown and Breakdown Fields.	60
1. Results of Measurements.	60
2. Weak Electric Fields	62
3. Strong Electric Fields.	63
Chapter VI. Electrical Conductivity of Germanium in Fields Higher than the Breakdown Value.	64
1. Results of Measurements.	64
2. Elementary Theory and Discussion of Results.	65
3. Results of Control Measurements.	69
4. Discussion of Results	71
5. Field Dependence of Carrier Drift Velocity.	73
Chapter VII. Electrical Discharge in Very Thin Germanium Layers at Low Temperatures	74
1. Samples and Measurement Method	74
2. Results of Measurements.	75
3. Breakdown in Thin Layers.	78
Appendix. Electrical Conductivity of Zinc-Doped Germanium	82
Literature Cited	84
Investigation of the Infrared Absorption Spectrum of Neutron-Irradiated Silicon É. N. Lotkova.	87
Introduction.	87
Chapter I. Effects of Radiations on a Semiconducting Crystal. Review of the Main Papers on Radiation Defects in Silicon	88
1. Types of Radiation Defect.	88
2. Displacement of Atoms by Neutron Bombardment.	89
3. Review of the Principal Investigations of Radiation Defects in Silicon Bombarded with Fast Neutrons	90
Chapter II. Experimental Method.	94
1. Instruments Used to Determine Infrared Absorption Spectra.	94
2. Cryostats.	97
3. Determination of Absorption Spectra.	99
4. Neutron Irradiation Technique.	101
5. Electrical Measurements and Determination of the Fermi Level Position	101
6. X-Ray Structure Analysis of Irradiated Silicon.	102
Chapter III. Experimental Results and Discussion	103
1. Absorption Bands in the 1- to 8- μ Range	103
2. Infrared Absorption at the Long-Wavelength Edge of the Fundamental Absorption Band of Irradiated Silicon.	113
3. Infrared Absorption of Irradiated Silicon in the 8- to 14- μ Range.	116

4. Role of Oxygen in the Formation of Radiation Defects in Neutron-Bombarded Silicon. Determination of the Rate of Generation of A Centers in Neutron-Irradiated Silicon	120
Conclusions	120
Literature Cited	123
Electrical and Optical Properties of Electroluminescent Capacitors Based on ZnS:Cu	
Yu. P. Chukova.	127
Introduction.	127
Chapter I. Principal Mechanism of Electroluminescence	128
1. Methods of Generating Nonequilibrium Carriers.	128
2. Concentration of an Electric Field	132
Chapter II. Experimental Method	136
1. Preparation of Capacitors	136
2. Measurement Methods	138
Chapter III. Frequency Characteristics of an Electroluminescent Capacitor	140
1. Brief Review of the Literature	140
2. Selection of Equivalent Circuit	143
3. Allowance for the Hyperbolic Frequency Dependence of the Resistance R_0	146
4. Parameters of a Capacitor and the Generality of the Proposed Circuit.	149
5. Luminescence of the Barriers and Luminescence of the Interior	153
Chapter IV. Dependence of the Characteristics of an Electroluminescent Capacitor on Voltage.	156
1. Dependence of the Brightness on the Voltage	156
2. Approximate Allowance for the Efficiency of an Electroluminescent Phosphor.	158
3. Dependence of the Absorbed Energy on the Voltage	165
4. Energy Yield of an Electroluminescent Capacitor.	169
5. Distribution of the Brightness Across the Surface of a Capacitor.	174
Chapter V. Rectification of the Current by an Electroluminescent Capacitor	177
1. Dependence on the Voltage.	178
2. Frequency Dependence of the Rectified Current.	178
3. Nature of the Rectification	185
4. Temperature Dependence of the Rectified Current	187
Conclusions	191
Literature Cited	194
